KNOW ALL MEN BY THESE PRESENTS, that I, Marthe Williams, for and in consideration of the sum of Twenty Three Thousand Seven Hundred Fifty Dollars and 00/100 ($23,750.00), receipt of which is hereby acknowledged, do hereby forever discharge and release South Carolina Electric and Gas Company (hereinafter SCE&G), and any and all other persons, firms, and corporations, their agents, employees, servants, heirs and successors, from any and all actions, causes of action, demands and/or claims of whatsoever nature which we may have in any way growing out of an incident which occurred on or about April 6, 2010, when Marthe Williams' back yard at 1532 Northland Drive in Cayce, South Carolina caught fire; to include any claims or causes of action that were or could have been asserted by Marthe Williams in that specific lawsuit Marthe Williams v. SCE&G, filed by Marthe Williams on or about April 5, 2013 in Lexington County Court of Common Pleas bearing docket number 2013-CP-32-01215; the consideration expressed herein constitutes a payment in full for all damages, losses and/or injuries to persons or property or both, whether known or unknown, developed or undeveloped, which have resulted or may result from the incident aforesaid.

We hereby declare and represent that the damages and/or injuries sustained may be permanent and/or progressive and that recovery therefrom is uncertain and indefinite, and that in making this Release, it is understood that we rely wholly on our own judgment, belief, and knowledge of the nature, extent and consequences of the damages and/or injuries and no representation or statement regarding any of the damages and/or injuries or regarding any other matter made by any of the persons, firms or corporations who are hereby released, or by any person or persons representing them or employed by them have influenced us to any extent whatsoever in making this Release.

It is further understood and agreed that the payment of the above amounts is not to be construed as an admission of liability on the part of the person or persons being released, liability by them being expressly denied.

We further understand and agree that any subrogated or third party interests, such as medical charges or Homeowners Insurance which were incurred as a result of the incident, must be satisfied in full from the proceeds of this settlement and we agree to hold harmless and indemnify SCE&G from any and all liability or responsibility with regard to such third party interests or liens, including any cost to enforce this provision or defend any actions brought by the third parties.

All agreements and understandings between the parties hereto are embodied herein and the terms of this Release are contractual and not a mere recital.

We have read the foregoing Release and understand it to be a full, final, and binding agreement.

IN WITNESS WHEREOF, we have hereunto set our hands and seals this 23 day of Jan., 2014.

Mr. William P. Crawford
203 Tower Circle
Hendersonville, SC 28739-7910

RE: William P. Crawford v. South Carolina Electric & Gas Company;
Docket No. 2014-45-E

Dear Mr. Crawford:

It was a pleasure speaking with your wife this afternoon, and I am pleased that we were able to resolve the issues between you and South Carolina Electric & Gas Company ("SCE&G") concerning the above-referenced matter. This letter confirms that telephone conversation in which I informed your wife that SCE&G agrees to issue a credit in the amount of $299.74 to your account at 14 Lockwood Drive, Apartment 12I, Charleston, SC 29401. In exchange for the credit, your wife indicated that you would agree to withdraw the complaint that you filed with the Public Service Commission of South Carolina ("Commission") against SCE&G.

Based upon our conversation, I have instructed SCE&G to issue a credit of $299.74 to your account, and SCE&G has informed me that it has done so. SCE&G now asks that you withdraw the complaint you filed with the Commission. To this end, I have enclosed a draft letter for your signature to send to the Commission, informing it that you wish to withdraw your complaint.

Again, it was a pleasure speaking with your wife. If you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

Matthew W. Gissendanner

Re: PSC Docket No. 2017-198-E, Order No. 2017-446, Gallipeau vs. SCE&G

Dear Mr. Gallipeau:

This letter is in regard to your pending complaint at the Public Service Commission ("PSC") under Docket No. 2017-198-E. You have requested ORS summarize the details discussed with you during the July 17, 2017 conference call. In response to Order No. 2017-446 issued by the PSC on July 12, 2017, the ORS reviewed the complaints you filed with the PSC and the ORS related to SCE&G. ORS makes no changes in its original investigation findings which identified that SCE&G was in compliance with the PSC rules and regulations.

ORS employees, Brad Kirby, April Sharpe and Dawn Hipp, contacted you via telephone on July 17, 2017 to discuss your complaint and provide you with details of an offer of settlement to resolve your complaint. As we discussed, SCE&G is interested in resolving this matter and has offered the following to you:

1) SCE&G will remove the $1.58 late payment charge assessed on the May 9, 2017 bill;
2) SCE&G will remove the $1.81 late payment charge assessed on the June 9, 2017 bill;
3) SCE&G has offered to re-enroll your account in the Budget Billing Program at $90.00 per month effective as of the next bill, which SCE&G estimates will be generated on or about August 9, 2017;
4) SCE&G agrees to your request to pay the July bill of $63.65 by August 3, 2017; and
5) SCE&G requests you submit a letter to the PSC to withdraw your pending complaint.

During our call, you stated that that you currently do not want to go back on the Budget Bill Program. ORS discussed with you that there was a possibility that SCE&G could shift your bill issuance date to better align with your monthly income dates and that, if at a later date, you wish to enroll in the Budget Bill Program it would be made available to you provided the account has been paid and is current. SCE&G reviewed your account and is not able to further adjust your monthly billing date to better align with your monthly income dates.

Should you wish to accept the terms of the SCE&G offer, please submit your letter of complaint withdrawal to the PSC as soon as possible. If you have any questions you may contact me at 803-737-5206.

Sincerely,

Brad Kirby

South Carolina Electric & Gas Company	Large accelerated filer ☐	Accelerated filer ☐	Non-accelerated filer ☒	Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Exchange Act Rule 12b-2).

SCANA Corporation Yes ☐ No ☒ South Carolina Electric & Gas Company Yes ☐ No ☒

The aggregate market value of voting stock held by non-affiliates of SCANA Corporation was $7.2 billion at June 30, 2015, the last business day of the registrant's most recently completed second fiscal quarter, based on the closing price of $50.65 per share. South Carolina Electric & Gas Company is a wholly-owned subsidiary of SCANA Corporation and has no voting stock other than its common stock, all of which is held beneficially and of record by SCANA Corporation. A description of registrants' common stock follows:

Registrant	Description of Common Stock	Shares Outstanding at February 19, 2016
SCANA Corporation	Without Par Value	142,916,917
South Carolina Electric & Gas Company	Without Par Value	40,296,147

Documents incorporated by reference: Specified sections of SCANA Corporation's Proxy Statement, in connection with its 2016 Annual Meeting of Shareholders, are incorporated by reference in Part III hereof.

This combined Form 10-K is separately filed by SCANA Corporation and South Carolina Electric & Gas Company. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. Each registrant makes no representation as to information relating to the other company.

South Carolina Electric & Gas Company meets the conditions set forth in General Instruction I(1) (a) and (b) of Form 10-K and therefore is filing this Form with the reduced disclosure format allowed under General Instruction I(2).

TABLE OF CONTENTS

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Statements included in this Annual Report on Form 10-K which are not statements of historical fact are intended to be, and are hereby identified as, “forward-looking statements” for purposes of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements include, but are not limited to, statements concerning key earnings drivers, customer growth, environmental regulations and expenditures, leverage ratio, projections for pension fund contributions, financing activities, access to sources of capital, impacts of the adoption of new accounting rules and estimated construction and other expenditures. In some cases, forward-looking statements can be identified by terminology such as “may,” “will,” “could,” “should,” “expects,” “forecasts,” “plans,” “anticipates,” “believes,” “estimates,” “projects,” “predicts,” “potential” or “continue” or the negative of these terms or other similar terminology. Readers are cautioned that any such forward-looking statements are not guarantees of future performance and involve a number of risks and uncertainties, and that actual results could differ materially from those indicated by such forward-looking statements. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, but are not limited to, the following:

(1) the information is of a preliminary nature and may be subject to further and/or continuing review and adjustment;

(2) legislative and regulatory actions, particularly changes in electric and gas services, rate regulation, regulations governing electric grid reliability and pipeline integrity, environmental regulations, and actions affecting the construction of new nuclear units;

(3) current and future litigation;

(4) changes in the economy, especially in areas served by subsidiaries of SCANA;

(5) the impact of competition from other energy suppliers, including competition from alternate fuels in industrial markets;

(6) the impact of conservation and demand side management efforts and/or technological advances on customer usage;

(7) the loss of sales to distributed generation, such as solar photovoltaic systems;

(8) growth opportunities for SCANA’s regulated and other subsidiaries;

(9) the results of short- and long-term financing efforts, including prospects for obtaining access to capital markets and other sources of liquidity;

(10) the effects of weather, especially in areas where the generation and transmission facilities of SCANA and its subsidiaries (the Company) are located and in areas served by SCANA’s subsidiaries;

(11) changes in SCANA’s or its subsidiaries’ accounting rules and accounting policies;

(12) payment and performance by counterparties and customers as contracted and when due;

(13) the results of efforts to license, site, construct and finance facilities for electric generation and transmission, including nuclear generating facilities;

(14) the results of efforts to operate the Company's electric and gas systems and assets in accordance with acceptable performance standards, including the impact of additional distributed generation and nuclear generation;

(15) maintaining creditworthy joint owners for SCE&G’s new nuclear generation project;

(16) the ability of suppliers, both domestic and international, to timely provide the labor, secure processes, components, parts, tools, equipment and other supplies needed, at agreed upon quality and prices, for our construction program, operations and maintenance;

(17) the results of efforts to ensure the physical and cyber security of key assets and processes;

(18) the availability of fuels such as coal, natural gas and enriched uranium used to produce electricity; the availability of purchased power and natural gas for distribution; the level and volatility of future market prices for such fuels and purchased power; and the ability to recover the costs for such fuels and purchased power;

(19) the availability of skilled, licensed and experienced human resources to properly manage, operate, and grow the Company’s businesses;

(20) labor disputes;

(21) performance of SCANA’s pension plan assets;

(22) changes in and realization of taxes and tax credits, including production tax credits for new nuclear units;

(23) inflation or deflation;

(24) compliance with regulations;

(25) natural disasters and man-made mishaps that directly affect our operations or the regulations governing them; and

(26) the other risks and uncertainties described from time to time in the reports filed by SCANA or SCE&G with the SEC.

SCANA and SCE&G disclaim any obligation to update any forward-looking statements.

PART I

ITEM 1. BUSINESS

INVESTOR INFORMATION

SCANA's and SCE&G's annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed with or furnished to the SEC are available free of charge through SCANA's internet website at *www.scana.com* (which is not intended as an active hyperlink; the information on SCANA's website is not a part of this report or any other report or document that SCANA or SCE&G files with or furnishes to the SEC) as soon as reasonably practicable after these reports are filed or furnished.

SCANA and SCE&G post information from time to time regarding developments relating to SCE&G's new nuclear project and other matters of interest to investors on SCANA's website. On SCANA's homepage, there is a yellow box containing links to the Nuclear Development and Other Investor Information sections of the website. The Nuclear Development section contains a yellow box with a link to project news and updates. The Other Investor Information section of the website contains a link to recent investor related information that cannot be found at other areas of the website. Some of the information that will be posted from time to time, including the quarterly reports that SCE&G submits to the SCPSC and the ORS in connection with the new nuclear project, may be deemed to be material information that has not otherwise become public. Investors, media and other interested persons are encouraged to review this information and can sign up, under the Investor Relations Section of the website, for an email alert when there is a new posting in the Nuclear Development and Other Investor Information yellow box.

CORPORATE STRUCTURE AND SEGMENTS OF BUSINESS

SCANA is a South Carolina corporation created in 1984 as a holding company. SCANA and its subsidiaries had full-time, permanent employees of 5,829 as of February 19, 2016 and 5,886 as of February 20, 2015. SCANA does not directly own or operate any significant physical properties, but it holds directly all of the capital stock of its subsidiaries except as described below, each of which is incorporated in South Carolina.

Regulated Utilities

SCE&G is engaged in the generation, transmission, distribution and sale of electricity to approximately 698,000 customers and the purchase, sale and transportation of natural gas to approximately 347,000 customers (each as of December 31, 2015). SCE&G's business experiences seasonal fluctuations, with generally higher sales of electricity during the summer and winter months because of air conditioning and heating requirements, and generally higher sales of natural gas during the winter months due to heating requirements. SCE&G's electric service territory extends into 24 counties covering nearly 16,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 35 counties in South Carolina and covers approximately 23,000 square miles. More than 3.4 million persons live in the counties where SCE&G conducts its business. Resale customers include municipalities, electric cooperatives, other investor-owned utilities, registered marketers and federal and state electric agencies. Predominant industries served by SCE&G include chemicals, educational services, paper products, food products, lumber and wood products, health services, textile manufacturing, rubber and miscellaneous plastic products, automotive and tire and fabricated metal products.

GENCO owns Williams Station and sells electricity, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a power purchase agreement and related operating agreement. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission allowances.

PSNC Energy purchases, sells and transports natural gas to approximately 534,000 residential, commercial and industrial customers (as of December 31, 2015). PSNC Energy serves 28 franchised counties covering approximately 12,000 square miles in North Carolina. The predominant industries served by PSNC Energy include educational services, food products, health services, automotive, chemicals, non-woven textiles, electrical generation and construction.

Nonregulated Businesses

SEMI markets natural gas in the southeast and provides energy-related services. SCANA Energy, a division of SEMI, sells natural gas to approximately 450,000 customers (as of December 31, 2015). Georgia's deregulated natural gas market includes approximately 1.6 million customers.

SCANA Services, Inc. provides administrative and management services to SCANA's other subsidiaries.

Disposals

CGT was sold to Dominion Resources, Inc. at the end of January 2015 and now operates as DCGT. SCI was sold to Spirit Communications in February 2015. In addition, SCANA owns two insignificant energy-related companies that are being liquidated.

For information with respect to major segments of business, see Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G and Note 12 of the consolidated financial statements for SCANA and SCE&G. All such information is incorporated herein by reference.

COMPETITION

For a discussion of the impact of competition, see the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

For a discussion of cash requirements for construction and nuclear fuel expenditures, contractual cash obligations, financing limits, financing transactions and other related information, see the Liquidity and Capital Resources section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

ELECTRIC OPERATIONS

Electric Sales

SCE&G's sales of electricity and margins earned from those sales by customer classification as percentages of electric revenues were as follows:

	Sales		Margins	
Customer Classification	**2014**	**2015**	**2014**	**2015**
Residential	45%	45%	50%	50%
Commercial	32%	33%	33%	33%
Industrial	18%	17%	14%	14%
Sales for resale	2%	2%	1%	1%
Other	3%	3%	2%	2%
Total	100%	100%	100%	100%

Sales for resale include sales to three municipalities and one electric cooperative. Short-term system sales and margins were not significant for either period presented.

During 2015 SCE&G experienced a net increase of approximately 10,000 electric customers (growth rate of 1.5%), increasing its total electric customers to approximately 698,000 at year end.

For the period 2016-2018, SCE&G projects total territorial kWh sales of electricity to increase 1.4% annually (assuming normal weather), total retail sales to grow 1.4% annually (assuming normal weather), total electric customer base to increase 1.6% annually and territorial peak load (summer, in MW) to increase 2.4% annually. SCE&G projects a retail kWh sales decrease of approximately 1.1% and customer growth of 1.7% from 2015 to 2016. SCE&G's goal is to maintain a planning reserve margin of between 14% and 20%; however, weather and other factors affect territorial peak load and can cause actual generating capacity on any given day to fall below the reserve margin goal.

Electric Interconnections

SCE&G purchases all of the electric generation of GENCO's Williams Station under a Unit Power Sales Agreement which has been approved by FERC. Williams Station has a net generating capacity (summer rating) of 605 MW.

SCE&G's transmission system extends over a large part of the central, southern and southwestern portions of South Carolina. The system interconnects with Duke Energy Carolinas, LLC, Duke Energy Progress, LLC, Santee Cooper, Georgia

Power Company and the Southeastern Power Administration's Clarks Hill (Thurmond) Project. SCE&G is a member of VACAR, one of several geographic divisions within the SERC. SERC is one of eight regional entities with delegated authority from NERC for the purpose of proposing and enforcing reliability standards approved by FERC. The regional entities and all members of NERC work to safeguard the reliability of the bulk power systems throughout North America.

Fuel Costs and Fuel Supply

The average cost of various fuels and the weighted average cost of all fuels (including oil) were as follows:

	Cost of Fuel Used		
	2013	2014	2015
Per MMBTU:			
Nuclear	$ 1.11	$ 1.01	$ 0.95
Coal	4.28	3.90	3.81
Natural Gas	4.63	5.19	3.26
All Fuels (weighted average)	3.53	3.62	3.01
Per Ton: Coal	104.63	96.74	95.69
Per MCF: Gas	4.69	5.30	3.35

The sources and percentages of total MWh generation by each category of fuel for the preceding three years and estimates for the next three years follow:

	% of Total MWh Generated					
	Actual			Estimated		
	2013	2014	2015	2016	2017	2018
Coal	45%	50%	39%	38%	40%	40%
Nuclear	24%	19%	20%	24%	21%	21%
Hydro	4%	3%	3%	3%	3%	3%
Natural Gas & Oil	26%	26%	36%	33%	34%	34%
Biomass/Solar	1%	2%	2%	2%	2%	2%
Total	100%	100%	100%	100%	100%	100%

For a listing of the Company's generating facilities, see the Electric Properties section within ITEM 2. PROPERTIES.

In 2015, coal was primarily obtained through long-term supply contracts with suppliers located in eastern Kentucky, Tennessee, Virginia, and West Virginia. These contracts provide for approximately 2.0 million tons annually. Sulfur restrictions on the contract coal range from 1.0% to 1.6%. These contracts expire at various times through 2018. Spot market purchases may occur when needed or when prices are believed to be favorable. The Company relies on unit trains and, in some cases, trucks and barges for coal deliveries.

SCANA and SCE&G believe that SCE&G's operations comply with all applicable regulations relating to the discharge of sulfur dioxide and nitrogen oxide. See additional discussion at Environmental Matters in Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G, for itself and as agent for Santee Cooper, and Westinghouse are parties to a fuel alliance agreement and contracts for fuel fabrication and related services. Under these contracts, SCE&G supplies enriched product to Westinghouse and Westinghouse supplies nuclear fuel assemblies for Summer Station Unit 1 and will supply assemblies for the New Units. Westinghouse will be SCE&G's exclusive provider of such fuel assemblies on a cost-plus basis. The fuel assemblies to be delivered under the contracts are expected to supply the nuclear fuel requirements of Summer Station Unit 1 and the New Units through 2033. SCE&G is dependent upon Westinghouse for providing fuel assemblies for the new AP1000 reactors in the New Units in the current and anticipated future absence of other commercially viable sources.

In addition, SCE&G has contracts covering its nuclear fuel needs for uranium, conversion services and enrichment services. These contracts have varying expiration dates through 2024. SCE&G believes that it will be able to renew contracts as they expire or enter into similar contractual arrangements with other suppliers of nuclear fuel materials and services and that sufficient capacity for nuclear fuel supplies and processing exists to preclude the impairment of normal operations of its nuclear generating units.

SCE&G stores spent nuclear fuel in its on-site spent-fuel pool, and has constructed a dry cask storage facility to accommodate the spent fuel output for the life of Summer Station Unit 1. In addition, Summer Station Unit 1 has sufficient on-site storage capacity to permit storage of the entire reactor core in the event that complete unloading should become desirable or necessary. For information about the contract with the DOE regarding disposal of spent fuel, see the Environmental section of Note 10 to the consolidated financial statements of SCANA and SCE&G.

SCE&G also uses long-term power purchase agreements to ensure that adequate power supply resources are in place to meet load obligations and reserve requirements. As of December 31, 2015, SCE&G had such agreements in place for 325 MW of capacity.

GAS OPERATIONS

Gas Sales-Regulated

Regulated sales of natural gas by customer classification as a percent of total regulated gas revenues sold or transported were as follows:

	SCANA		SCE&G	
Customer Classification	**2014**	**2015**	**2014**	**2015**
Residential	54.9%	57.0%	44.1%	47.9%
Commercial	26.5%	26.8%	28.2%	28.0%
Industrial	12.4%	11.0%	24.6%	20.6%
Transportation Gas	6.2%	5.2%	3.1%	3.5%
Total	100.0%	100.0%	100.0%	100.0%

For the period 2016-2018, SCANA projects total consolidated sales of regulated natural gas in MMBTUs to increase 1.7% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.6%, commercial of 1.2% and industrial of 0.8%.

For the period 2016-2018, SCE&G projects total consolidated sales of regulated natural gas in MMBTUs to increase 1.4% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.6%, commercial of 0.8% and industrial of 1.1%.

For the period 2016-2018, each of SCANA’s and SCE&G’s total regulated natural gas customer base is projected to increase 2.6% annually. During 2015 SCANA recorded a net increase of approximately 22,000 regulated gas customers (growth rate of 2.6%), increasing its regulated gas customers to approximately 881,000. Of this increase, SCE&G recorded a net increase of approximately 9,000 gas customers (growth rate of 2.7%), increasing its total gas customers to approximately 347,000 (as of December 31, 2015).

Demand for gas changes primarily due to weather and the price relationship between gas and alternate fuels.

Gas Cost, Supply and Curtailment Plans

SCE&G purchases natural gas under contracts with producers and marketers in both the spot and long-term markets. The gas is delivered to South Carolina through firm transportation agreements with Southern Natural (expiring in 2018), Transco (expiring at various times through 2031) and DCGT (expiring at various times through 2030). The maximum daily volume of gas that SCE&G is entitled to transport under these contracts is 212,194 MMBTU from Southern Natural, 104,652 MMBTU from Transco and 449,727 MMBTU from DCGT. Additional natural gas volumes may be delivered to SCE&G’s system as capacity is available through interruptible transportation.

The daily volume of gas that SEMI is entitled to transport under service agreements with DCGT (expiring in 2016, 2017 and 2023) on a firm basis is 83,704 MMBTU.

SCE&G purchased natural gas, including fixed transportation, at an average cost of $3.67 per MMBTU during 2015 and $5.48 per MMBTU during 2014.

SCE&G was allocated 5,502,600 MMBTU of natural gas storage capacity on the systems of Southern Natural and Transco. Approximately 4,558,600 MMBTU of gas were in storage on December 31, 2015. To meet the requirements of its high priority natural gas customers during periods of maximum demand, SCE&G supplements its supplies of natural gas with two LNG liquefaction storage facilities, one of which has liquefaction capability. The LNG plants are capable of storing the liquefied equivalent of 1,964,600 MMBTU of natural gas. Approximately 1,842,800 MMBTU (liquefied equivalent) of gas were in storage on December 31, 2015.

PSNC Energy purchases natural gas under contracts with producers and marketers on a short-term basis at market based prices and on a long-term basis for reliability assurance at first of the month index prices plus a reservation charge in certain cases. Transco transports natural gas to North Carolina through transportation agreements with varying expiration dates through 2032. On a peak day, PSNC Energy is capable of receiving daily transportation volumes of natural gas under these contracts, utilizing firm contracts of 710,062 MMBTU from Transco.

PSNC Energy purchased natural gas, including fixed transportation, at an average cost of $4.12 per MMBTU during 2015 compared to $5.67 per MMBTU during 2014.

To meet the requirements of its high priority natural gas customers during periods of maximum demand, PSNC Energy supplements its supplies of natural gas with underground natural gas storage services and LNG peaking services. Underground natural gas storage service agreements with Dominion Transmission, Inc., Columbia Gas Transmission, Transco and Spectra Energy provide for storage capacity of approximately 13,000,000 MMBTU. Approximately 11,000,000 MMBTU of gas were in storage under these agreements at December 31, 2015. In addition, PSNC Energy’s LNG facility can store the liquefied equivalent of 1,000,000 MMBTU of natural gas with regasification capability of approximately 100,000 MMBTU per day. Approximately 900,000 MMBTU (liquefied equivalent) of gas were in storage at December 31, 2015. LNG storage service agreements with Transco, Cove Point LNG and Pine Needle LNG provide for 1,300,000 MMBTU (liquefied equivalent) of storage space. Approximately 1,300,000 MMBTU (liquefied equivalent) were in storage under these agreements at December 31, 2015.

SCANA and SCE&G believe that supplies under long-term contracts and supplies available for spot market purchase are adequate to meet existing customer demands and to accommodate growth.

Gas Marketing-Nonregulated

SEMI markets natural gas and provides energy-related services in the Southeast. In addition, SCANA Energy, a division of SEMI, markets natural gas to approximately 450,000 customers (as of December 31, 2015) in Georgia’s natural gas market. Georgia’s natural gas market includes approximately 1.6 million customers.

Risk Management

For a discussion of risk management policies and procedures, see Note 6 to the consolidated financial statements for SCANA and SCE&G.

REGULATION

Regulatory jurisdictions to which SCANA and its subsidiaries are subject are described in the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

SCE&G holds licenses under the Federal Power Act for each of its hydroelectric projects. The licenses expire as follows:

Project	License Expiration
Saluda (Lake Murray)	*
Fairfield Pumped Storage/Parr Shoals	2020
Stevens Creek	2025
Neal Shoals	2036

* SCE&G operates the Saluda hydroelectric project under an annual license while its long-term re-licensing application is being reviewed by FERC.

At the termination of a license under the Federal Power Act, FERC may extend or issue a new license to the previous licensee, or may issue a license to another applicant, or the federal government may take over the related project. If the federal government takes over a project or if FERC issues a license to another applicant, the federal government or the new licensee, as the case may be, must pay the previous licensee an amount equal to its net investment in the project, not to exceed fair value, plus severance damages.

RATE MATTERS

For a discussion of the impact of various rate matters, see the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G, and Note 2 to the consolidated financial statements for SCANA and SCE&G.

Fuel Cost Recovery Procedures

The SCPSC's fuel cost recovery procedure determines the fuel component in SCE&G's retail electric base rates annually based on projected fuel costs for the ensuing 12-month period, adjusted for any over-collection or under-collection from the preceding 12-month period. The statutory definition of fuel costs includes certain variable environmental costs, such as ammonia, lime, limestone and catalysts consumed in reducing or treating emissions. The definition also includes the cost of emission allowances used for sulfur dioxide, nitrogen oxide, mercury and particulates. In 2014, the South Carolina General Assembly amended the statutory definition of fuel cost thereby allowing electric utilities to recover avoided costs under the Public Utility Regulatory Policy Act of 1978. The South Carolina General Assembly further amended the fuel cost statute to allow for the recovery of costs incurred as a result of offering DER programs and net metering to its customers as a separate component of the overall fuel factor. SCE&G may request a formal proceeding concerning its fuel costs at any time.

Fuel cost recovery procedures related to the Company's natural gas operations along with related rate proceedings by the SCPSC and NCUC are described in Note 2 to the consolidated financial statements for SCANA and SCE&G.

ENVIRONMENTAL MATTERS

Federal and state authorities have imposed environmental regulations and standards relating primarily to air emissions, wastewater discharges and solid, toxic and hazardous waste management. Developments in these areas may require that equipment and facilities be modified, supplemented or replaced. The ultimate effect of any new or pending regulations or standards upon existing operations cannot be predicted. For a discussion of how these regulations and standards may impact SCANA and SCE&G (including capital expenditures necessitated thereby), see the Environmental Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 10 to the consolidated financial statements for SCANA and SCE&G.

OTHER MATTERS

Insurance coverage for SCE&G's nuclear units is described in Note 10 to the consolidated financial statements for SCANA and SCE&G.

ITEM 1A. RISK FACTORS

The risk factors that follow relate in each case to the Company, and where indicated the risk factors also relate to Consolidated SCE&G.

Commodity price changes, delays and other factors may affect the operating cost, capital expenditures and competitive positions of the Company's and Consolidated SCE&G's energy businesses, thereby adversely impacting results of operations, cash flows and financial condition.

Our energy businesses are sensitive to changes in coal, natural gas, uranium and other commodity prices (as well as their transportation costs) and availability. Any such changes could affect the prices these businesses charge, their operating costs and the competitive position of their products and services. Consolidated SCE&G is permitted to recover the prudently incurred cost of purchased power and fuel (including transportation) used in electric generation through retail customers' bills, but purchased power and fuel cost increases affect electric prices and therefore the competitive position of electricity against other energy sources. In addition, when natural gas prices are low enough relative to coal to require the dispatch of gas-fired electric generation ahead of coal-fired electric generation, higher inventories of coal, with related increased carrying costs, may result. This may adversely affect our results of operations, cash flows and financial condition.

In the case of regulated natural gas operations, costs prudently incurred for purchased gas and pipeline capacity may be recovered through retail customers' bills. However, in both our regulated and deregulated natural gas markets, increases in gas costs affect total retail prices and therefore the competitive position of gas relative to electricity and other forms of energy. Accordingly, customers able to do so may switch to alternate forms of energy and reduce their usage of gas from the Company and Consolidated SCE&G. Customers on a volumetric rate structure unable to switch to alternate fuels or suppliers may reduce their usage of gas from the Company and Consolidated SCE&G. A regulatory mechanism applies to residential and commercial customers at PSNC Energy to mitigate the earnings impact of an increase or decrease in gas usage.

Certain construction-related commodities, such as copper and aluminum used in our transmission and distribution lines and in our electrical equipment, and steel, concrete and rare earth elements, have experienced significant price fluctuations due to changes in worldwide demand. To operate our air emissions control equipment, we use significant quantities of ammonia, limestone and lime. With EPA-mandated industry-wide compliance requirements for air emissions controls, increased demand for these reagents, combined with the increased demand for low sulfur coal, may result in higher costs for coal and reagents used for compliance purposes.

The costs of large capital projects, such as the Company's and Consolidated SCE&G's construction for environmental compliance and its construction of the New Units and associated transmission, are significant and are subject to a number of risks and uncertainties that may adversely affect the cost, timing and completion of the projects.

The Company's and Consolidated SCE&G's businesses are capital intensive and require significant investments in energy generation and in other internal infrastructure projects, including projects for environmental compliance. For example, SCE&G and Santee Cooper have agreed to jointly own, contract the design and construction of, and operate the New Units, which will be two 1,250 MW (1,117 MW, net) nuclear units at SCE&G's Summer Station, in pursuit of which they have committed and are continuing to commit significant resources. In addition, construction of significant new transmission infrastructure is necessary to support the New Units and is under way as an integral part of the project. Achieving the intended benefits of any large construction project is subject to many uncertainties. For instance, the ability to adhere to established budgets and construction schedules may be affected by many variables, such as the regulatory, legal, training and construction processes associated with securing approvals, permits and licenses and necessary amendments to them within projected timeframes, the availability of labor and materials at estimated costs, the availability and cost of financing, and weather. There also may be contractor or supplier performance issues or adverse changes in their creditworthiness, unforeseen difficulties meeting critical regulatory requirements, contract disputes and litigation, and changes in key contractors or subcontractors. There may be unforeseen engineering problems or unanticipated changes in project design or scope. Our ability to complete construction projects (including new baseload generation) as well as our ability to maintain current operations at reasonable cost could be affected by the availability of key components or commodities, increases in the price of or the unavailability of labor, commodities or other materials, increases in lead times for components, adverse changes in applicable laws and regulations, new or enhanced environmental or regulatory requirements, supply chain failures (whether resulting from the foregoing or other factors), and disruptions in the transportation of components, commodities and fuels. Some of the foregoing issues have been experienced in the construction of the New Units. A discussion of certain of those matters can be found under New Nuclear Construction in Note 10 to the consolidated financial statements for SCANA and SCE&G.

Should the construction of the New Units adversely deviate from the schedules (by more than 18 months), estimates, and projections timely submitted to and approved by the SCPSC pursuant to the BLRA, the SCPSC could disallow the additional capital costs that result from the deviations to the extent that it is deemed that the Company's failure to anticipate or avoid the deviation, or to minimize the resulting expenses, was imprudent, considering the information available at the time. Depending upon the magnitude of any such disallowed capital costs, the Company could be moved to evaluate the prudency of continuation, adjustment to, or termination of the project.

Furthermore, jointly owned projects, such as the current construction of the New Units, are subject to the risk that one or more of the joint owners becomes either unable or unwilling to continue to fund project financial commitments, new joint owners cannot be secured at equivalent financial terms, or changes in the joint ownership make-up will increase project costs and/or delay the completion.

To the extent that delays occur, costs become unrecoverable, or we otherwise become unable to effectively manage and complete our capital projects, our results of operations, cash flows and financial condition, as well as our qualifications for applicable governmental programs and benefits, such as production tax credits, may be adversely affected.

The use of derivative instruments could result in financial losses and liquidity constraints. The Company and Consolidated SCE&G do not fully hedge against financial market risks or price changes in commodities. This could result in increased costs, thereby resulting in lower margins and adversely affecting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G use derivative instruments, including futures, forwards, options and swaps, to manage our financial market risks. The Company also uses such derivative instruments to manage certain commodity (i.e., natural gas) market risk. We could be required to provide cash collateral or recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities and financial contracts or if a counterparty fails to perform under a contract.

The Company strives to manage commodity price exposure by establishing risk limits and entering into contracts to offset some of our positions (i.e., to hedge our exposure to demand and other changes in commodity prices). We do not hedge the entire exposure of our operations from commodity price volatility. To the extent we do not hedge against commodity price volatility or our hedges are not effective, results of operations, cash flows and financial condition may be diminished.

Changing and complex laws and regulations to which the Company and Consolidated SCE&G are subject could adversely affect revenues, increase costs, or curtail activities, thereby adversely impacting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G operate under the regulatory authority of the United States government and its various regulatory agencies, including the FERC, NRC, SEC, IRS, EPA, CFTC and PHMSA. In addition, the Company and Consolidated SCE&G are subject to regulation by the state governments of South Carolina, North Carolina and Georgia via regulatory agencies, state environmental commissions, and state employment commissions. Accordingly, the Company and Consolidated SCE&G must comply with extensive federal, state and local laws and regulations. Such governmental oversight and regulation broadly and materially affect the operation of our businesses. In addition to many other aspects of our businesses, these requirements impact the services mandated or offered to our customers, and the licensing, siting, construction and operation of facilities. They affect our management of safety, the reliability of our electric and natural gas systems, the physical and cyber security of key assets, customer conservation through DSM Programs, information security, the issuance of securities and borrowing of money, financial reporting, interactions among affiliates, the payment of dividends and employment programs and practices. Changes to governmental regulations are continual and potentially costly to effect compliance. Non-compliance with these requirements by third parties, such as our contractors, vendors and agents, may subject the Company and Consolidated SCE&G to operational risks and to liability. We cannot predict the future course of changes in this regulatory environment or the ultimate effect that this changing regulatory environment will have on the Company's or Consolidated SCE&G's businesses. Non-compliance with these laws and regulations could result in fines, litigation, loss of licenses or permits, mandated capital expenditures and other adverse business outcomes, as well as reputational damage, which could adversely affect the cash flows, results of operations, and financial condition of the Company and Consolidated SCE&G.

Furthermore, changes in or uncertainty in monetary, fiscal, or regulatory policies of the Federal government may adversely affect the debt and equity markets and the economic climate for the nation, region or particular industries, such as ours or those of our customers. The Company and Consolidated SCE&G could be adversely impacted by changes in tax policy, such as the loss of production tax credits related to the construction of the New Units.

The Company and Consolidated SCE&G are subject to extensive rate regulation which could adversely affect operations. Large capital projects, results of DSM Programs and/or increases in operating costs may lead to requests for regulatory relief, such as rate increases, which may be denied, in whole or part, by rate regulators. Rate increases may also result in reductions in customer usage of electricity or gas, legislative action and lawsuits.

SCE&G's electric operations in South Carolina and the Company's gas distribution operations in South Carolina and North Carolina are regulated by state utilities commissions. In addition, the construction of the New Units by SCE&G is subject to rate regulation by the SCPSC via the BLRA. Consolidated SCE&G's generating facilities are subject to extensive regulation and oversight from the NRC and SCPSC. SCE&G's electric transmission system is subject to extensive regulations and oversight from the SCPSC, NERC and FERC. Implementing and maintaining compliance with the NERC's mandatory reliability standards, enforced by FERC, for bulk electric systems could result in higher operating costs and capital expenditures. Non-compliance with these standards could subject SCE&G to substantial monetary penalties. Our gas marketing operations in Georgia are subject to state regulatory oversight and, for a portion of its operations, to rate regulation. There can be no assurance that Georgia's gas delivery regulatory framework will remain unchanged as market conditions evolve.

Furthermore, Dodd-Frank affects the use and reporting of derivative instruments. The regulations under this legislation provide for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and require numerous rule-makings by the CFTC and the SEC to implement, many of which are still pending final action by those federal agencies. The Company and Consolidated SCE&G have determined that they meet the end-user exception to mandatory clearing of swaps under Dodd-Frank. In addition, the Company and Consolidated SCE&G have taken steps to ensure that they are not the party required to report these transactions in real-time (the "reporting party") by transacting solely with swap dealers and major swap participants, when possible, as well as entering into reporting party agreements with counterparties who also are not swap dealers or major swap participants, which establishes that those counterparties are obligated to report the transactions in accordance with applicable Dodd-Frank regulations. While these actions minimize the reporting obligations of the Company, they do not eliminate required recordkeeping for any Dodd-Frank regulated transactions. Moreover, the Company retains reporting responsibility for certain types of swaps, such as the annual reporting of trade options. Despite qualifying for the end-user exception to mandatory clearing and ensuring that neither the Company nor Consolidated SCE&G is the reporting party to a transaction required to be reported in real-time, we cannot predict when the final regulations will be issued or what requirements they will impose.

Although we believe that we have constructive relationships with the regulators, our ability to obtain rate treatment that will allow us to maintain reasonable rates of return is dependent upon regulatory determinations, and there can be no assurance that we will be able to implement rate adjustments when sought.

The Company and Consolidated SCE&G are subject to numerous environmental laws and regulations that require significant capital expenditures, can increase our costs of operations and may impact our business plans or expose us to environmental liabilities.

The Company and Consolidated SCE&G are subject to extensive federal, state and local environmental laws and regulations, including those relating to water quality and air emissions (such as reducing nitrogen oxide, sulfur dioxide, mercury and particulate matter). Some form of regulation is expected at the federal and state levels to impose regulatory requirements specifically directed at reducing GHG emissions from fossil fuel-fired electric generating units. On August 3, 2015, the EPA issued a revised standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The final rule requires all new coal-fired power plants to meet a carbon emission rate of 1,400 pounds carbon dioxide per MWh. No new coal-fired plants could be constructed without partial carbon capture and sequestration capabilities. The Company is evaluating the final rule, but does not plan to construct new coal-fired units in the foreseeable future. In addition, on August 3, 2015, the EPA issued its final rule on emission guidelines for states to follow in developing plans to address GHG emissions from existing units. The rule includes state-specific goals for reducing national carbon dioxide emissions by 32% from 2005 levels by 2030. However, on February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. Also, a number of bills have been introduced in Congress that seek to require GHG emissions reductions from fossil fuel-fired electric generation facilities, natural gas facilities and other sectors of the economy, although none have yet been enacted. In April 2012 the EPA issued the finalized MATS for power plants that requires reduced emissions from new and existing coal and oil-fired electric utility steam generating facilities. In October 2014, the stay on CSAPR was lifted and CAIR was set aside, thus reinstating CSAPR sulfur dioxide and nitrogen oxide allocations on electric generating units in 28 states, including South Carolina. In 2010, the EPA set a new NAAQS limit for sulfur dioxide and in August 2015 issued the Data Requirements Rule for implementing the one-hour sulfur dioxide standard. In October 2015 a new NAAQS limit for ozone was finalized by the EPA. The EPA's rule for cooling water intake structures to meet the best technology available became effective in October 2014, and the EPA also issued a final rule in December 2014 regarding the handling of coal ash and other combustion by-products produced by power plant operations. Furthermore, the EPA finalized new standards under the CWA governing effluent limitation guidelines for electric generating units in September 2015.

Compliance with these environmental laws and regulations requires us to commit significant resources toward environmental monitoring, installation of pollution control equipment, emissions fees and permitting at our facilities. These expenditures have been significant in the past and are expected to continue or even increase in the future. Changes in compliance requirements or more restrictive interpretations by governmental authorities of existing requirements may impose additional costs on us (such as the clean-up of MGP sites or additional emission allowances) or require us to incur additional expenditures or curtail some of our cost savings activities (such as the recycling of fly ash and other coal combustion products for beneficial use). Compliance with any GHG emission reduction requirements, including any mandated renewable portfolio standards, also may impose significant costs on us, and the resulting price increases to our customers may lower customer consumption. Such costs of compliance with environmental regulations could negatively impact our industry, our businesses and our results of operations and financial position, especially if emissions or discharge limits are reduced or more onerous permitting requirements or additional regulatory requirements are imposed.

Renewable and/or alternative electric generation portfolio standards may be enacted at the federal or state level. In June 2014 the State of South Carolina enacted legislation known as Act 236 with the stated goal for each investor-owned utility to add up to 2% of its 5-year average retail peak demand with renewable electric generation resources by the end of 2020. A utility, at its option, may add an additional 1% during this period. Such renewable energy may not be readily available in our service territories and could be costly to build, acquire, and operate. Resulting increases in the price of electricity to recover the cost of these types of generation, as approved by regulatory commissions, could result in significantly lower usage of electricity by our customers. In addition, DER generation at customers' facilities could result in the loss of sales to those customers. Compliance with potential future portfolio standards could significantly impact our industry, our capital expenditures, and our results of operations and financial condition.

The compliance costs of these environmental laws and regulations are important considerations in the Company's and Consolidated SCE&G's strategic planning and, as a result, significantly affect the decisions to construct, operate, and retire facilities, including generating facilities. In effecting compliance with MATS, SCE&G has retired three of its oldest and smallest coal-fired units and converted three others such that they may be gas-fired.

The Company and Consolidated SCE&G are vulnerable to interest rate increases, which would increase our borrowing costs, and we may not have access to capital at favorable rates, if at all. Additionally, potential disruptions in the capital and credit markets may further adversely affect the availability and cost of short-term funds for liquidity requirements and our ability to meet long-term commitments; each could in turn adversely affect our results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G rely on the capital markets, particularly for publicly offered debt and equity, as well as the banking and commercial paper markets, to meet our financial commitments and short-term liquidity needs if internal funds are not available from operations. Changes in interest rates affect the cost of borrowing. The Company's and Consolidated SCE&G's business plans, which include significant investments in energy generation and other internal infrastructure projects, reflect the expectation that we will have access to the capital markets on satisfactory terms to fund commitments. Moreover, the ability to maintain short-term liquidity by utilizing commercial paper programs is dependent upon maintaining satisfactory short-term debt ratings and the existence of a market for our commercial paper generally.

The Company's and Consolidated SCE&G's ability to draw on our respective bank revolving credit facilities is dependent on the ability of the banks that are parties to the facilities to meet their funding commitments and on our ability to timely renew such facilities. Those banks may not be able to meet their funding commitments to the Company or Consolidated SCE&G if they experience shortages of capital and liquidity or if they experience excessive volumes of borrowing requests from us and other borrowers within a short period of time. Longer-term disruptions in the capital and credit markets as a result of uncertainty, changing or increased regulation, reduced alternatives or failures of significant financial institutions could adversely affect our access to liquidity needed for our businesses. Any disruption could require the Company and Consolidated SCE&G to take measures to conserve cash until the markets stabilize or until alternative credit arrangements or other funding for our business needs can be arranged. Such measures could include deferring capital expenditures or other discretionary uses of cash. Disruptions in capital and credit markets also could result in higher interest rates on debt securities, limited or no access to the commercial paper market, increased costs associated with commercial paper borrowing or limitations on the maturities of commercial paper that can be sold (if at all), increased costs under bank credit facilities and reduced availability thereof, and increased costs for certain variable interest rate debt securities of the Company and Consolidated SCE&G.

Disruptions in the capital markets and its actual or perceived effects on particular businesses and the greater economy also adversely affect the value of the investments held within SCANA's pension trust. A significant long-term decline in the value of these investments may require us to make or increase contributions to the trust to meet future funding requirements. In addition, a significant decline in the market value of the investments may adversely impact the Company's and Consolidated SCE&G's results of operations, cash flows and financial condition, including its shareholders' equity.

A downgrade in the credit rating of SCANA or any of SCANA's subsidiaries, including SCE&G, could negatively affect our ability to access capital and to operate our businesses, thereby adversely affecting results of operations, cash flows and financial condition.

Various rating agencies currently rate SCANA's long-term senior unsecured debt, SCE&G's long-term senior secured debt, and the long-term senior unsecured debt of PSNC Energy as investment grade. In addition, rating agencies maintain ratings on the short-term debt of SCANA, SCE&G, Fuel Company (which ratings are based upon the guarantee of SCE&G) and PSNC Energy. Rating agencies consider qualitative and quantitative factors when assessing SCANA and its rated operating companies' credit ratings, including regulatory environment, capital structure and the ability to meet liquidity requirements. Changes in the regulatory environment or deterioration of our rated companies' commonly monitored financial credit metrics could adversely affect their debt ratings. If these rating agencies were to downgrade any of these ratings, particularly to below investment grade for long-term ratings, borrowing costs on new issuances would increase, which would diminish financial results, and the potential pool of investors and funding sources could decrease.

Operating results may be adversely affected by natural disasters, man-made mishaps and abnormal weather.

The Company has delivered less gas and received lower prices for natural gas in deregulated markets when weather conditions have been milder than normal, and as a consequence earned less income from those operations. During 2010 the SCPSC approved SCE&G's implementation of an eWNA on a pilot basis; it was discontinued at the end of 2013. Mild weather in the future could diminish the revenues and results of operations and harm the financial condition of the Company and Consolidated SCE&G. Hot or cold weather could result in higher bills for customers and result in higher write-offs of receivables and in a greater number of disconnections for non-payment. In addition, for the Company and Consolidated SCE&G, severe weather can be destructive, causing outages and property damage, adversely affecting operating expenses and revenues.

Natural disasters (such as electromagnetic events and the 2011 earthquake and tsunami in Japan) or man-made mishaps (such as the San Bruno, California natural gas transmission pipeline failure, the Kingston, Tennessee coal ash pond failure, and cyber-security failures experienced by many businesses) could have direct significant impacts on the Company and Consolidated SCE&G and on our key contractors and suppliers or could impact us through changes to federal, state or local policies, laws and regulations, and have a significant impact on our financial condition, operating expenses, and cash flows.

Potential competitive changes may adversely affect our gas and electricity businesses due to the loss of customers, reductions in revenues, or write-down of stranded assets.

The utility industry has been undergoing structural change for a number of years, resulting in increasing competitive pressures on electric and natural gas utility companies. Competition in wholesale power sales via a RTO/ISO (Regional Transmission Organization/Independent System Operator) is in effect across much of the country, but the Southeastern utilities have retained the traditional bundled, vertically integrated structure. Should a RTO/ISO-market be implemented in the Southeast, potential risks emerge from reliance on volatile wholesale market prices as well as increased costs associated with new delivery transmission and distribution infrastructure.

Some states have also mandated or encouraged unbundled retail competition. Should this occur in South Carolina, increased competition may create greater risks to the stability of utility earnings generally and may in the future reduce earnings from retail electric and natural gas sales. In a deregulated environment, formerly regulated utility companies that are not responsive to a competitive energy marketplace may suffer erosion in market share, revenues and profits as competitors gain access to their customers. In addition, the Company's and Consolidated SCE&G's generation assets would be exposed to considerable financial risk in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, a write-down in the value of the related assets would be required.

The Company and Consolidated SCE&G are subject to the risk of loss of sales due to the growth of distributed generation especially in the form of renewable power such as solar photovoltaic systems, which systems have undergone a rapid decline in their costs. As a result of federal and state subsidies, potential regulations allowing third-party retail sales, and advances in distributed generation technology, the growth of such distributed generation could be significant in the future. Such growth will lessen Company and Consolidated SCE&G sales and slow growth, potentially causing higher rates to customers.

The Company and SCE&G are subject to risks associated with changes in business and economic climate which could adversely affect revenues, results of operations, cash flows and financial condition and could limit access to capital.

Sales, sales growth and customer usage patterns are dependent upon the economic climate in the service territories of the Company and SCE&G, which may be affected by regional, national or even international economic factors. Some economic sectors important to our customer base may be particularly affected. Adverse events, economic or otherwise, may also affect the operations of suppliers and key customers. Such events may result in the loss of suppliers or customers, in costs charged by suppliers, in changes to customer usage patterns and in the failure of customers to make timely payments to us. With respect to the Company, such events also could adversely impact the results of operations through the recording of a goodwill or other asset impairment. The success of local and state governments in attracting new industry to our service territories is important to our sales and growth in sales, as are stable levels of taxation (including property, income or other taxes) which may be affected by local, state, or federal budget deficits, adverse economic climates generally or legislative or regulatory actions. Budget cutbacks also adversely affect funding levels of federal and state support agencies and non-profit organizations that assist low income customers with bill payments.

In addition, conservation and demand side management efforts and/or technological advances may cause or enable customers to significantly reduce their usage of the Company's and SCE&G's products and adversely affect sales, sales growth, and customer usage patterns. For instance, improvements in energy storage technology, if realized, could have dramatic impacts on the viability of and growth in distributed generation.

Factors that generally could affect our ability to access capital include economic conditions and our capital structure. Much of our business is capital intensive, and achievement of our capital plan and long-term growth targets is dependent, at least in part, upon our ability to access capital at rates and on terms we determine to be attractive. If our ability to access capital becomes significantly constrained, our interest costs will likely increase and our financial condition and future results of operations could be significantly harmed.

Problems with operations could cause us to curtail or limit our ability to serve customers or cause us to incur substantial costs, thereby adversely impacting revenues, results of operations, cash flows and financial condition.

Critical processes or systems in the Company's or Consolidated SCE&G's operations could become impaired or fail from a variety of causes, such as equipment breakdown, transmission equipment failure, information systems failure or security breach, natural disasters, and the effects of a pandemic or terrorist attack on our workforce or facilities or on the ability of vendors and suppliers to maintain services key to our operations.

In particular, as the operator of power generation facilities, many of which entered service prior to 1985 and may be difficult to maintain, Consolidated SCE&G could incur problems, such as the breakdown or failure of power generation or emission control equipment, transmission equipment, or other equipment or processes which would result in performance below assumed levels of output or efficiency. The operation of the New Units or the integration of a significant amount of distributed generation into our systems may entail additional cycling of our coal-fired generation facilities and may thereby increase the number of unplanned outages at those facilities. In addition, any such breakdown or failure may result in Consolidated SCE&G purchasing emission allowances or replacement power at market rates, if such allowances and replacement power are available at all. These purchases are subject to state regulatory prudency reviews for recovery through rates. If replacement power is not available, such problems could result in interruptions of service (blackout or brownout conditions) in all or part of SCE&G's territory or elsewhere in the region. Similarly, a natural gas line failure of the Company or Consolidated SCE&G could affect the safety of the public, destroy property, and interrupt our ability to serve customers.

Events such as these could entail substantial repair costs, litigation, fines and penalties, and damage to reputation, each of which could have an adverse effect on the Company's revenues, results of operations, and financial condition. Insurance may not be available or adequate to respond to these events.

A failure of the Company to maintain the physical and cyber security of its operations may result in the failure of operations, damage to equipment, or loss of information, and could result in a significant adverse impact to the Company's financial condition, results of operations and cash flows.

The Company depends on maintaining the physical and cyber security of its operations and assets. As much of our business is part of the nation's critical infrastructure, the loss or impairment of the assets associated with that portion of our businesses could have serious adverse impacts on the customers and communities that we serve. Virtually all of the Company's operations are dependent in some manner upon our cyber systems, which encompass electric and gas operations, nuclear and fossil fuel generating plants, human resource and customer systems and databases, information system networks, and systems containing confidential corporate information. Cyber systems, such as those of the Company, are often targets of malicious cyber attacks. A successful physical or cyber attack could lead to outages, failure of operations of all or portions of our businesses, damage to key components and equipment, and exposure of confidential customer, employee, or corporate information. The Company may not be readily able to recover from such events. In addition, the failure to secure our operations from such physical and cyber events may cause us reputational damage. Litigation, penalties and claims from a number of parties, including customers, regulators and shareholders, may ensue. Insurance may not be adequate to respond to these events. As a result, the Company's financial condition, results of operations, and cash flows may be adversely affected.

SCANA's ability to pay dividends and to make payments on SCANA's debt securities may be limited by covenants in certain financial instruments and by the financial results and condition of its subsidiaries, thereby adversely impacting the valuation of our common stock and our access to capital.

We are a holding company that conducts substantially all of our operations through our subsidiaries. Our assets consist primarily of investments in subsidiaries. Therefore, our ability to meet our obligations for payment of interest and principal on outstanding debt and to pay dividends to shareholders and corporate expenses depends on the earnings, cash flows, financial condition and capital requirements of our subsidiaries, and the ability of our subsidiaries, principally Consolidated SCE&G, PSNC Energy and SEMI, to pay dividends or to repay funds to us. Our ability to pay dividends on our common stock may also be limited by existing or future covenants limiting the right of our subsidiaries to pay dividends on their common stock. Any significant reduction in our payment of dividends in the future may result in a decline in the value of our common stock. Such a decline in value could limit our ability to raise debt and equity capital.

A significant portion of Consolidated SCE&G's generating capacity is derived from nuclear power, the use of which exposes us to regulatory, environmental and business risks. These risks could increase our costs or otherwise constrain our business, thereby adversely impacting our results of operations, cash flows and financial condition. These risks will increase as the New Units are developed.

In 2015, Summer Station Unit 1, operated by SCE&G, provided approximately 4.7 million MWh, or 20% of our generation. When the New Units are completed, our generating capacity and the percentage of total generating capacity represented by nuclear sources are expected to increase. Hence, SCE&G is subject to various risks of nuclear generation, which include the following:

- The potential harmful effects on the environment and human health resulting from a release of radioactive materials in connection with the operation of nuclear facilities and the storage, handling and disposal of radioactive materials;
- Limitations on the amounts and types of insurance commercially available to cover losses that might arise in connection with our nuclear operations or those of others in the United States;
- The possibility that new laws and regulations could be enacted that could adversely affect the liability structure that currently exists in the United States;
- Uncertainties with respect to procurement of nuclear fuel and the storage of spent nuclear fuel;
- Uncertainties with respect to contingencies if insurance coverage is inadequate; and
- Uncertainties with respect to the technological and financial aspects of decommissioning nuclear plants at the end of their operating lives.

The NRC has broad authority under federal law to impose licensing and safety-related requirements for the operation of nuclear generation facilities. In the event of non-compliance, the NRC has the authority to impose fines or shut down a unit, or both, depending upon its assessment of the severity of the situation, until compliance is achieved. Revised safety requirements promulgated by the NRC could necessitate capital expenditures at nuclear plants such as ours. Although we have no reason to anticipate a serious nuclear incident, a major incident at a nuclear facility anywhere in the world could cause the NRC to limit or prohibit the operation or licensing of any domestic nuclear unit, resulting in costly changes to units under construction or in operation and harming our results of operations, cash flows and financial condition. Furthermore, a major incident at a domestic nuclear facility could result in retrospective premium assessments under our nuclear insurance coverages. Finally, in today's environment, there is a heightened risk of terrorist attack on the nation's nuclear facilities, which has resulted in increased security costs at our nuclear plant.

Failure to retain and attract key personnel could adversely affect the Company's and Consolidated SCE&G's operations and financial performance.

As with many other utilities, a significant portion of our workforce will be eligible for retirement during the next few years. We must attract, retain and develop executive officers and other professional, technical and craft employees with the skills and experience necessary to successfully manage, operate and grow our businesses. Competition for these employees is high, and in some cases we must compete for these employees on a regional or national basis. We may be unable to attract and retain these personnel. In particular, the timely hiring, training, licensing and retention of personnel needed for the operation of the New Units is necessary to maintain the schedule for their operation. Further, the Company's or Consolidated SCE&G's ability to construct or maintain generation or other assets requires the availability of suitable skilled contractor personnel. We may be unable to obtain appropriate contractor personnel at the times and places needed. Labor disputes with employees or contractors covered by collective bargaining agreements also could adversely affect implementation of our strategic plan and our operational and financial performance. Furthermore, increased medical benefit costs of employees and retirees could adversely affect the results of operations of the Company and Consolidated SCE&G. Medical costs in this country have risen significantly over the past number of years and are expected to continue to increase at unpredictable rates. Such increases, unless satisfactorily managed by the Company and Consolidated SCE&G, could adversely affect results of operations.

The Company and Consolidated SCE&G are subject to the risk that strategic decisions made by us either do not result in a return of or on invested capital or might negatively impact our competitive position, which can adversely impact our results of operations, cash flows, financial condition, and access to capital.

From time to time, the Company and Consolidated SCE&G make strategic decisions that may impact our direction with regard to business opportunities, the services and technologies offered to customers or that are used to serve customers, and the generating plants and other infrastructure that form the basis of much of our business. These strategic decisions may not result in a return of or on our invested capital, and the effects of these strategic decisions may have long-term implications that are not likely to be known to us in the short-term. Changing political climates and public attitudes, including customers' concerns regarding rate increases such as those periodic rate increases under the BLRA, may adversely affect the ongoing acceptability of strategic decisions that have been made (and, in some cases, previously supported by legislation or approved by regulators), to the detriment of the Company or Consolidated SCE&G (e.g., revision or repeal of the BLRA). Over time, these strategic decisions or changing attitudes toward such decisions, which could be adverse to the Company's or Consolidated SCE&G's interests, may have a negative effect on our results of operations, cash flows and financial condition, as well as limit our ability to access capital.

The Company and Consolidated SCE&G are subject to the reputational risks that may result from a failure to adhere to high standards of compliance with laws and regulations, ethical conduct, operational effectiveness, customer service and the safety of employees, customers and the public. These risks could adversely affect the valuation of our common stock and the Company's and Consolidated SCE&G's access to capital.

The Company and Consolidated SCE&G are committed to comply with all laws and regulations, to focus on the safety of employees, customers and the public, to maintain the privacy of information related to our customers and employees and to maintain effective communications with the public and key stakeholder groups, particularly during emergencies and times of crisis. Traditional news media and social media can very rapidly convey information, whether factual or not, to large numbers of people, including customers, investors, regulators, legislators and other stakeholders, and the failure to effectively manage timely communication through these channels could adversely impact our reputation. The Company and Consolidated SCE&G also are committed to operational excellence, to quality customer service, and, through our Code of Conduct and Ethics, to maintain high standards of ethical conduct in our business operations. A failure to meet these commitments may subject the Company and Consolidated SCE&G not only to fraud, regulatory action, litigation and financial loss, but also to reputational risk that could adversely affect the valuation of SCANA's stock, adversely affect the Company's and Consolidated SCE&G's access to capital, and result in further regulatory oversight. Insurance may not be available or adequate to respond to these events.

ITEM 1B. UNRESOLVED STAFF COMMENTS

Not Applicable

ITEM 2. PROPERTIES

SCANA owns no significant property other than the capital stock of each of its subsidiaries. It holds, directly or indirectly, all of the capital stock of each of its subsidiaries. See also Note 13 to the consolidated financial statements of SCANA.

SCE&G's bond indenture, which secures its First Mortgage Bonds, constitutes a direct mortgage lien on substantially all of its electric utility property. GENCO's Williams Station is also subject to a first mortgage lien which secures certain outstanding debt of GENCO.

Electric Properties

The following table shows the electric generating facilities and their net generating capacity as of December 31, 2015.

	In-Service Date	Net Generating Capacity Summer (MW)	
Coal-Fired Steam:			
Wateree - Eastover, SC	1970	684	
Williams - Goose Creek, SC	1973	605	
Cope - Cope, SC	1996	415	
Kapstone - Charleston, SC	1999	85	
Gas-Fired Steam:			
McMeekin - Irmo, SC	1958	250	*
Urquhart Unit 3 - Beech Island, SC	1953	95	
Nuclear:			
Summer Station Unit 1 - Parr, SC (reflects SCE&G's 66.7% ownership share)	1984	647	
Summer Station Unit 2 and Unit 3 - Parr, SC			**
Internal Combustion Turbines:			
Peaking units - various locations in SC	1968-2010	349	
Urquhart Combined Cycle - Beech Island, SC	2002	458	
Jasper Combined Cycle - Jasper, SC	2004	852	
Hydro:			
Saluda - Irmo, SC	1930	200	
Other hydro units - various locations in or bordering SC	1905-1914	18	
Fairfield Pumped Storage - Parr, SC	1978	576	

* McMeekin units were fueled with coal and natural gas during 2015. The Company expects to burn natural gas exclusively beginning in early 2016.
** SCE&G owns 55% of Unit 2 and Unit 3, which are being constructed at Summer Station.

SCE&G owns 435 substations having an aggregate transformer capacity of 31.0 million KVA. The transmission system consists of 3,450 miles of lines, and the distribution system consists of 18,478 pole miles of overhead lines and 7,264 trench miles of underground lines.

Natural Gas Distribution and Transmission Properties

SCE&G's natural gas system includes 447 miles of transmission pipeline of up to 20 inches in diameter that connect its distribution system with Southern Natural, Transco and DCGT. SCE&G's distribution system consists of 17,046 miles of distribution mains and related service facilities. SCE&G also owns two LNG plants, one located near Charleston, South Carolina, and the other in Salley, South Carolina. The Charleston facility can liquefy up to 6,180 MMBTU per day and store the liquefied equivalent of 1,009,400 MMBTU of natural gas. The Salley facility can store the liquefied equivalent of 927,000 MMBTU of natural gas and has no liquefying capabilities. The LNG facilities have the capacity to regasify approximately 61,800 MMBTU per day at Charleston and 92,700 MMBTU per day at Salley.

PSNC Energy's natural gas system consists of 613 miles of transmission pipeline of up to 24 inches in diameter that connect its distribution systems with Transco. PSNC Energy's distribution system consists of 21,268 miles of distribution mains and related service facilities. PSNC Energy owns one LNG plant with storage capacity of 1,000,000 MMBTU, the capacity to liquefy up to 4,000 MMBTU per day and the capacity to regasify approximately 100,000 MMBTU per day.

ITEM 3. LEGAL PROCEEDINGS

SCANA and SCE&G are subject to various claims and litigation incidental to their business operations which management anticipates will be resolved without a material impact on their respective results of operations, cash flows or financial condition. In addition, certain material regulatory and environmental matters and uncertainties, some of which remain outstanding at December 31, 2015, are described in the Rate Matters section of Note 2 and in the Environmental section of Note 10 to the consolidated financial statements of SCANA and SCE&G.

ITEM 4. MINE SAFETY DISCLOSURES

Not Applicable

EXECUTIVE OFFICERS OF SCANA CORPORATION

Executive officers are elected at the annual meeting of the Board of Directors, held immediately after the annual meeting of shareholders, and hold office until the next such annual meeting, unless (1) a resignation is submitted, (2) the Board of Directors shall otherwise determine or (3) as provided in the By-laws of SCANA. Positions held are for SCANA and all subsidiaries unless otherwise indicated.

Name	Age	Positions Held During Past Five Years	Dates
Kevin B. Marsh	60	Chairman of the Board and Chief Executive Officer	2011-present

PART II
ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES

SCANA Corporation:

Price Range (NYSE Composite Listing):

	2015				2014			
	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.
High	$ 61.95	$ 57.73	$ 56.26	$ 65.57	$ 63.41	$ 53.89	$ 53.88	$ 51.39
Low	$ 54.84	$ 50.17	$ 47.77	$ 52.03	$ 47.77	$ 48.53	$ 49.51	$ 45.58

SCANA common stock trades on the NYSE using the ticker symbol SCG. At February 19, 2016 there were 142,916,917 shares of SCANA common stock outstanding which were held by approximately 26,000 shareholders of record. For a summary of equity securities issuable under SCANA's compensation plans at December 31, 2015, see ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS.

SCANA declared quarterly dividends on its common stock of $0.545 per share in 2015 and $0.525 per share in 2014. On February 18, 2016, SCANA increased the quarterly cash dividend rate on SCANA common stock to $0.575 per share, an increase of approximately 5.5%. The next quarterly dividend is payable April 1, 2016 to shareholders of record on March 10, 2016. For a discussion of provisions that could limit the payment of cash dividends, see ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCANA.

The following table provides information about purchases by or on behalf of SCANA or any affiliated purchaser (as defined in Rule 10b-18(a)(3) under the Securities Exchange Act of 1934) during the fourth quarter of 2015 of shares or other units of any class of SCANA's equity securities that are registered pursuant to Section 12 of the Securities Exchange Act of 1934:

Issuer Purchases of Equity Securities

	(a)	(b)	(c)	(d)
Period	Total number of shares (or units) purchased	Average price paid per share (or unit)	Total number of shares (or units) purchased as part of publicly announced plans or programs	Maximum number (or approximate dollar value) of shares (or units) that may yet be purchased under the plans or programs
October 1-31	268,139	$ 56.51	268,139	
November 1-30	71,699	$ 59.19	71,699	
December 1-31	68,761	$ 59.57	68,761	
Total	408,599		408,599	*

*On December 16, 2014 SCANA announced a program to convert from original issue to open market purchase of SCANA common stock for all applicable compensation and dividend reinvestment plans once the sales of certain subsidiaries were completed. The sales of the subsidiaries were completed in the first quarter of 2015. This program has no stated maximum number of shares that may be purchased and no stated expiration date.

SCE&G:

All of SCE&G's common stock is owned by SCANA, and no established public trading market exists for SCE&G common stock. During 2015 and 2014, SCE&G declared quarterly dividends on its common stock in the following amounts:

Declaration Date	Amount	Declaration Date	Amount
February 20, 2014	$ 62.5 million	February 20, 2015	$ 69.0 million
April 24, 2014	62.8 million	April 30, 2015	67.8 million
July 31, 2014	66.8 million	July 30, 2015	68.4 million
October 30, 2014	72.5 million	October 29, 2015	72.3 million

On February 18, 2016, SCE&G declared a quarterly dividend on its common stock of $72.2 million.

For a discussion of provisions that could limit the payment of cash dividends, see ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCE&G.

ITEM 6. SELECTED FINANCIAL DATA

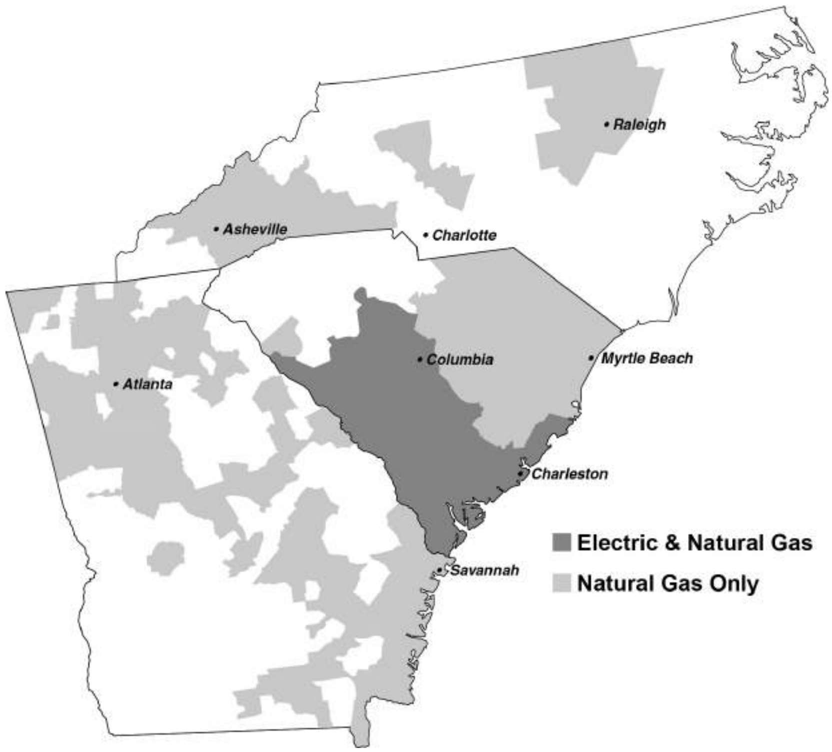
For information on the impact of certain dispositions on SCANA's selected financial data, see Note 13 to SCANA's consolidated financial statements.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCANA, through its wholly-owned regulated subsidiaries, is primarily engaged in the generation, transmission, distribution and sale of electricity in South Carolina and in the purchase, transmission and sale of natural gas in North Carolina and South Carolina. Through a wholly-owned nonregulated subsidiary, SCANA markets natural gas to retail customers in Georgia and to wholesale customers in the southeast. A service company subsidiary of SCANA provides primarily administrative and management services to SCANA and its subsidiaries.

The following map indicates areas where the Company’s significant business segments conduct their activities, as further described in this overview section.



The following percentages reflect net income earned by the Company’s regulated and nonregulated businesses (including the holding company) and the percentage of total assets held by them.

	2015	2014	2013
Net Income			
Regulated	90%	98%	97%
Nonregulated	10%	2%	3%
Assets			
Regulated	97%	95%	95%
Nonregulated	3%	5%	5%

In the first quarter of 2015, SCANA closed on the sales of its interstate natural gas pipeline and telecommunications subsidiaries. The differences between 2014 and 2015 percentages of net income from regulated and nonregulated businesses are attributable to these sales. See Note 13 to the consolidated financial statements.

Key Earnings Drivers and Outlook

During 2015, economic growth continued to improve in the southeast. In the Company's South Carolina and North Carolina service territories, companies announced plans during the year to invest over $2 billion, with the expectation of creating approximately 6,500 jobs. South Carolina's unemployment rate ended December 2015 at 5.5%, a drop of 1% over 2014, an improvement that takes on greater significance when considering that almost 80,000 more South Carolinians were employed at the end of 2015 over 2014. In addition, each of the Company's regulated businesses experienced positive customer growth year over year.

Over the next five years, key earnings drivers for the Company will be additions to rate base at its regulated subsidiaries, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage in each of the regulated utility businesses, earnings in the natural gas marketing business in Georgia and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

SCE&G's electric operations primarily generates electricity and provides for its transmission, distribution and sale to approximately 698,000 customers (as of December 31, 2015) in portions of South Carolina in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control costs. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electricity prices and, therefore, the competitive position of electricity against other energy sources.

Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2015 was 10.25% for non-BLRA rate base and 11.0% for BLRA-related rate base. To prevent the need for a non-BLRA base rate increase during years of peak nuclear construction, SCE&G has a stated goal of earning a return on equity for non-BLRA rate base of 9% or higher. For the year ended December 31, 2015, SCE&G's earned return on equity related to non-BLRA rate base was approximately 9.75%.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of two 1,250 MW (1,117 MW, net) nuclear generation units, which SCE&G will jointly own with Santee Cooper. SCE&G's current ownership share in the New Units is 55%, and SCE&G has agreed to acquire an additional 5% ownership from Santee Cooper in increments beginning with the commercial operation date of Unit 2. The purchase of this additional 5% ownership is expected to be funded by increased cash flows resulting from tax deductibility of depreciation associated with the New Units when they enter commercial operation.

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. As of December 31, 2015, SCE&G's investment in the New Units totaled $3.6 billion, for which the financing costs on $3.2 billion have been reflected in rates under the BLRA.

In September 2015, the SCPSC approved an updated BLRA milestone schedule and certain updated owner's costs and other capital costs, some of which were associated with schedule delays and other contested costs. Also in September 2015, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%, to be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016.

On October 27, 2015, SCE&G, Santee Cooper and the Consortium reached a settlement regarding certain disputes, and the EPC Contract was amended. The October 2015 Amendment became effective on December 31, 2015, and among other things, it resolved by settlement and release substantially all outstanding disputes between SCE&G and the Consortium. The October 2015 Amendment also provides SCE&G and Santee Cooper an irrevocable option, until November 1, 2016 and subject to regulatory approvals, to further amend the EPC Contract to fix the total amount to be paid to the Consortium for its entire scope of work on the project after June 30, 2015, subject to certain exceptions.

On November 19, 2015, SCE&G held an allowable *ex parte* communication briefing with the SCPSC to describe SCE&G's settlement with the Consortium. During that briefing, the Company provided the following summary of key points related to the SCPSC's September 2015 order and the October 2015 Amendment.

	SCPSC Order #2015-661 September 2015	**October 2015 Amendment**	**Fixed Price Option Under the October 2015 Amendment**
Guaranteed Substantial Completion Dates	Unit 2 - June 2019 Unit 3 - June 2020	Unit 2 - August 2019 Unit 3 - August 2020	
Capital Cost (SCE&G's 55% share)	$5.247 billion	$5.492 billion	$6.757 billion
Future Escalation to WEC*	$794 million	$813 million	$19 million
Total Expected Project Cost (SCE&G's 55% share)	$6.827 billion	$7.113 billion	$7.601 billion
Liquidated Damages	$155 million at 100%$86 million - SCE&G	$926 million at 100% $509 million - SCE&G	$676 million at 100% $372 million - SCE&G
Bonuses	Capacity Performance Related	Completion - Capacity Performance bonus removed $550 million at 100% $303 million - SCE&G	$300 million at 100% $165 million - SCE&G
Change in Law Language	Generally defined	Explicitly defined - Formal written adoption of a new statute, regulation, requirement, or code or new NRC regulatory requirement that did not exist as of this amendment	

* The fixed price option, regardless of date of acceptance, would fix project costs and shift the risk of escalation (excluding escalation primarily on owner's and transmission costs) to WEC as of June 30, 2015. Total gross escalation recorded as of June 30, 2015 is $386 million. Under the fixed price option, total gross escalation remaining on the project is estimated to be approximately $145 million.

Following an evaluation as to whether to exercise the fixed price option, SCE&G expects to file a petition, as provided under the BLRA, for an update to the project's estimated capital cost schedule which would incorporate the impact of the October 2015 Amendment. Refer to the Exhibit Index for information on where a copy of the October 2015 Amendment is available publicly.

The information summarized above, as well as additional information on these and other related matters, is further discussed at Note 2 and Note 10 to the consolidated financial statements.

Environmental

EPA regulations have a significant impact on the Company's electric operations. In 2015, several regulations were proposed or became final, including the following:

- On June 29, 2015, the Supreme Court ruled that the EPA unreasonably failed to consider costs in its decision to regulate mercury and other specified air pollutants under the MATS rule, but did not vacate MATS. The EPA has indicated that it expects to issue a revised rule responsive to the issue raised by the Supreme Court by April 15, 2016. SCE&G and GENCO have received a one-year extension (until April 2016) to comply with MATS at certain of their generating stations. These extensions will allow time to convert one generating station to burn natural gas and to install additional pollution control devices at other generating stations. SCE&G and GENCO currently are in compliance with the MATS rule and expect to remain in compliance.

- A revised standard for new power plants under the CAA was proposed on August 3, 2015, and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. This rule effectively prevents construction of new coal-fired plants without partial carbon capture and sequestration capabilities.

- On August 3, 2015, the EPA issued its final rule under the Clean Power Plan that would regulate carbon dioxide emissions from existing units. This rule includes state-specific goals for reducing national carbon dioxide emissions by 32% from 2005 levels by 2030. The rule provides for nuclear reactors under construction, such as the New Units, to count towards compliance and establishes a phased-in compliance approach beginning in 2022. The rule gives states from one to three years to issue SIPs, which will ultimately define the specific compliance methodology that will be applied to existing units in that state. It is expected that South Carolina will request a two-year extension (until September 2018). On February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. The order of the Supreme Court has no immediate impact on SCE&G and GENCO or their generation operations. Any costs incurred to comply with such rule are expected to be recoverable through rates.

- The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved in connection with the renewal (every five years) of state-issued NPDES permits. The ELG Rule became effective January 4, 2016. SCE&G and GENCO expect that wastewater treatment technology retrofits will be required at two generating stations and may be required at other facilities. The extent of the station-specific retrofits required and the related schedule for compliance will be determined in connection with each plant's NPDES permit renewal.

- New federal regulations affecting the management and disposal of CCRs became effective in the fourth quarter of 2015. Under these regulations, CCRs will not be regulated as hazardous waste. These regulations do impose certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. These regulations are not expected to have a material effect on SCE&G and GENCO because SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The above environmental initiatives and similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, the Company cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on the Company, if any. The Company believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The local distribution operations of SCE&G and PSNC Energy purchase, transport and sell natural gas to approximately 881,000 retail customers (as of December 31, 2015) in portions of South Carolina and North Carolina in areas covering approximately 35,000 square miles. Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25% for SCE&G and 10.60% for PSNC Energy.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact the Company's ability to retain large commercial and industrial customers.

The production of shale gas in the United States continues to keep prices for this commodity at historic lows, and such prices are expected to continue at such levels for the foreseeable future. The supply of natural gas from the Marcellus and Utica shale basins in West Virginia, Pennsylvania and Ohio has prompted companies unaffiliated with SCANA to propose a 550-mile pipeline that would bring natural gas from these basins to Virginia and North Carolina. If successful, the completed pipeline may drive economic development along its path, including areas within PSNC Energy's service territory, and may serve to keep natural gas competitively priced in the region.

Retail Gas Marketing

SCANA Energy, a division of SEMI, sells natural gas to approximately 450,000 customers (as of December 31, 2015) throughout Georgia. This market is mature, resulting in lower margins and stiff competition. Competitors include affiliates of large energy companies as well as electric membership cooperatives, among others. SCANA Energy's ability to maintain its market share primarily depends on the prices it charges customers relative to the prices charged by its competitors and its ability to provide high levels of customer service. In addition, SCANA Energy's operating results are sensitive to weather.

As Georgia's regulated provider, SCANA Energy provides service to customers considered to be low-income or that are otherwise unable to obtain natural gas service from other marketers. SCANA Energy provides this service at rates approved by the GPSC and receives funding from Georgia's Universal Service Fund to offset some of the resulting bad debt. SCANA Energy files financial and other information periodically with the GPSC, and such information is available at *www.psc.state.ga.us* (which is not intended as an active hyperlink; the information on the GPSC website is not part of this or any other report filed by the Company with the SEC).

SCANA Energy and certain of SCANA's other natural gas distribution and marketing segments maintain gas inventory and utilize forward contracts and other financial instruments, including commodity swaps and futures contracts, to manage exposure to fluctuating commodity natural gas prices. See Note 6 to the consolidated financial statements. As a part of this risk management process, at any given time, a portion of SCANA's projected natural gas needs has been purchased or placed under contract.

Energy Marketing

The divisions of SEMI, excluding SCANA Energy, market natural gas in the southeast and provide energy-related services to customers. Operating results for energy marketing are primarily influenced by customer demand for natural gas and the ability to control costs. The price of alternate fuels and customer growth significantly affect demand for natural gas. In addition, certain pipeline capacity available for Energy Marketing to serve industrial and other customers is dependent upon the market share held by SCANA Energy in the retail market.

RESULTS OF OPERATIONS

Earnings Per Share

The Company reports earnings determined in accordance with GAAP. Management believes that, in addition to reported earnings under GAAP, the Company's GAAP-adjusted weather-normalized net earnings (and earnings per share) provide a meaningful representation of its fundamental earnings power and can aid in performing period-over-period financial analysis and comparison with peer group data. In management's opinion, in addition to operating income for regulated businesses, GAAP-adjusted weather-normalized net earnings (and earnings per share) are a useful indicator of the financial results of the Company's primary businesses. These measures are also a basis for management's provision of earnings guidance and growth projections and are used in part by management in making budgetary and operational decisions including determining eligibility for certain incentive compensation payments. These non-GAAP performance measures are not intended to replace the GAAP measures of net earnings (or earnings per share), but are offered as supplements to it. A reconciliation of GAAP earnings per share to GAAP-adjusted weather-normalized net earnings per share follows:

	2015	2014	2013
GAAP basic earnings per share	$ 5.22	$ 3.79	$ 3.40
Deduct:			
Gain on sale of CGT	0.95	—	—
Gain on sale of SCI	0.46	—	—
SCE&G Electric - effect of abnormal weather	0.08	0.21	—
GAAP-adjusted weather-normalized basic earnings per share	$ 3.73	$ 3.58	$ 3.40
GAAP diluted earnings per share	$ 5.22	$ 3.79	$ 3.39
GAAP-adjusted weather-normalized diluted earnings per share	$ 3.73	$ 3.58	$ 3.39
Cash dividends declared per share	$ 2.18	$ 2.10	$ 2.03

2015 vs 2014

Earnings per share on a GAAP basis increased due to the sale of CGT and SCI, higher electric margins, lower operation and maintenance expenses and lower depreciation expense. These increases were partially offset by lower gas margins, higher property taxes, lower other income, higher interest expense, a higher effective tax rate and dilution from additional shares outstanding, as further described below.

2014 vs 2013

Basic earnings per share on a GAAP basis increased primarily due to the effects of weather, customer growth and base rate increases under the BLRA. Higher electric and gas margins were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes, dilution from additional shares outstanding and higher interest expense, as further described below.

Discussion of above adjustments:

The sales of CGT and SCI were closed in the first quarter of 2015. These subsidiaries operated principally in wholesale markets, whereas the Company's primary focus is the delivery of energy-related products and services to retail markets. Therefore, CGT and SCI were not a part of the Company's core business. See Note 13 to the consolidated financial statements. In aggregate, these subsidiaries contributed basic earnings per share of $.02 in 2015, $.14 in 2014 and $.15 in 2013.

SCE&G estimates the effects of abnormal weather on its electric business by comparing actual temperatures in its service territory to a historical average. The result is used in developing an estimate of electric margin revenue, using average margin rates, attributable to the effects of abnormal weather. In 2013 the Company's eWNA was still in place, so therefore there was no effect of abnormal weather on the Company's electric margin. In January 2014 the eWNA was terminated by order of the SCPSC.

Management believes the above adjustments are appropriate in determining the non-GAAP financial performance measures. Such non-GAAP measures reflect management's decision that wholesale gas transportation and telecommunications operations were not a part of the Company's core businesses and would not align with the Company's commitment to serve retail customers on a long-term basis. The non-GAAP measures also provide a consistent basis upon which to measure performance by excluding the effects on per share earnings of abnormal weather in the electric business.

Diluted earnings per share figures give effect to dilutive potential common stock using the treasury stock method. See Note 1 to the consolidated financial statements.

On February 18, 2016, SCANA declared a quarterly cash dividend on its common stock of $.575 per share.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 2,557.1	(2.7)%	$ 2,629.4	8.2%	$ 2,430.5
Less: Fuel used in electric generation	660.6	(17.4)%	799.3	6.4%	751.0
Purchased power	52.1	(35.4)%	80.7	87.7%	43.0
Margin	1,844.4	5.4 %	1,749.4	6.9%	1,636.5
Other operation and maintenance expenses	497.1	0.5 %	494.8	3.2%	479.6
Depreciation and amortization	277.3	(7.7)%	300.3	1.2%	296.7
Other taxes	194.5	4.2 %	186.7	3.2%	180.9
Operating Income	$ 875.5	14.1 %	$ 767.6	13.0%	$ 679.3

2015 vs 2014

- Margin increased due to downward adjustments of $69.0 million in 2014, compared to downward adjustments of $19.7 million in 2015, pursuant to orders of the SCPSC, related to fuel cost recovery and DSM Programs. These adjustments had no effect on net income as they were fully offset by the recognition, within other income, of gains realized upon the late 2013 settlement of certain derivative interest rate contracts, lower depreciation expense upon the adoption and implementation of revised depreciation rates as a result of an updated depreciation study and the application, as a reduction to operation and maintenance expenses, of a portion of the storm damage reserve. Margin also increased due to base rate increases under the BLRA of $65.7 million and residential and commercial customer growth of $21.4 million. These increases were partially offset by $25.6 million due to the effects of weather, lower industrial margins of $14.6 million primarily due to variable price contracts, and lower collections under the rate rider for pension costs of $3.0 million. See Note 2 to the consolidated financial statements.

- Operations and maintenance expenses increased due to the application of $5.0 million in 2014 of the storm damage reserve to offset downward revenue adjustments related to DSM Programs and the amortization of $3.7 million of DSM Programs cost. These increases were partially offset by lower labor costs of $2.0 million primarily due to lower pension cost recognition as a result of lower rate rider collections.
- Depreciation and amortization decreased by $28.7 million in 2015 due to the implementation of the above mentioned revised depreciation rates, $14.5 million of which was offset by downward revenue adjustments. This decrease in depreciation expense was partially offset by increases associated with net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

2014 vs 2013

- Electric margin increased due to the effects of weather of $43.5 million, base rate increases under the BLRA of $54.1 million and customer growth of $14.7 million. These margin increases were partially offset by downward adjustments of $69.0 million in 2014, compared to downward adjustments of $50.1 million in 2013, pursuant to SCPSC orders related to fuel cost recovery, the reversal of undercollected amounts related to SCE&G's eWNA program (the eWNA was discontinued effective with the first billing cycle of 2014) and DSM Programs. Such adjustments are fully offset by the recognition within other income of gains realized upon the late 2013 settlement of certain derivative interest rate contracts and the application, as a reduction to operation and maintenance expenses, of a portion of the storm damage reserve, both of which had been deferred in regulatory accounts. See Note 2 to the consolidated financial statements.
- Operations and maintenance expenses increased due to nonlabor operating expenses of $8.9 million, DSM Programs cost amortization of $2.1 million, higher labor expense of $1.1 million which includes incentive compensation and lower pension cost recognition, storm expenses of $1.1 million and other general expenses of $1.9 million.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2015	Change	2014	Change	2013
Residential	7,978	(2.2)%	8,156	7.7	7,571
Commercial	7,386	0.2 %	7,371	2.3%	7,205
Industrial	6,201	(0.5)%	6,234	3.9%	6,000
Other	595	(0.8)%	600	3.3%	581
Total retail sales	22,160	(0.9)%	22,361	4.7%	21,357
Wholesale	942	(1.7)%	958	0.3%	955
Total Sales	23,102	(0.9)%	23,319	4.5%	22,312

2015 vs 2014

Retail sales volumes decreased primarily due to the effects of weather, partially offset by customer growth.

2014 vs 2013

Retail sales volumes increased primarily due to the effects of weather and customer growth.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G and PSNC Energy. Gas Distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 811.7	(20.0)%	$ 1,014.0	7.6%	$ 942.6
Less: Gas purchased for resale	383.7	(35.2)%	592.5	10.8%	534.9
Margin	428.0	1.5 %	421.5	3.4%	407.7
Other operation and maintenance expenses	161.4	4.3 %	154.8	1.4%	152.7
Depreciation and amortization	77.5	7.0 %	72.4	3.6%	69.9
Other taxes	37.5	7.8 %	34.8	8.1%	32.2
Operating Income	$ 151.6	(5.0)%	$ 159.5	4.3%	$ 152.9

2015 vs 2014

- Margin increased due to residential and commercial customer growth of $7.8 million partially offset by a decrease of $3.1 million at SCE&G due to a SCPSC-approved decrease in base rates under the RSA effective November 2014.
- Operation and maintenance expenses increased due to higher labor costs, primarily due to incentive compensation.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

2014 vs 2013

- Margin increased primarily due to residential and commercial customer growth of $9.1 million and increased average usage at SCE&G of $2.5 million.
- Operations and maintenance expense increased $0.9 million due to labor.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2015	Change	2014	Change	2013
Residential	39,090	(15.4)%	46,207	12.0 %	41,268
Commercial	28,064	(8.6)%	30,701	8.9 %	28,181
Industrial	20,101	(1.2)%	20,343	(8.9)%	22,319
Transportation gas	49,297	8.3 %	45,506	7.8 %	42,221
Total	136,552	(4.3)%	142,757	6.5 %	133,989

2015 vs 2014

Residential and commercial firm sales volumes decreased due to the effects of weather and lower average use, partially offset by customer growth. Commercial and industrial interruptible volumes decreased due to a shift to transportation service from system supply and the impact of curtailments, partially offset by lower curtailments at PSNC Energy. Transportation volumes increased due to customers shifting to transportation-only service at SCE&G and increased sales for natural gas fired electric generation in PSNC Energy's territory.

2014 vs 2013

Total sales volumes increased primarily due to weather and residential and commercial customer growth. Industrial sales volumes decreased primarily due to weather-related curtailments and a customer switching to an alternative fuel source. Transportation sales increased due to an increase in natural gas fired generation, partially offset by curtailments.

Retail Gas Marketing

Retail Gas Marketing is comprised of SCANA Energy, which operates in Georgia’s natural gas market. Retail Gas Marketing operating revenues and net income were as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 449.2	(12.8)%	$ 514.9	10.7%	$ 465.2
Net Income	18.6	(28.2)%	25.9	8.8%	23.8

Changes in operating revenues are primarily related to the lower price of natural gas and weather-related changes in demand. Changes in net income are primarily due to weather-related changes in demand.

Energy Marketing

Energy Marketing is comprised of the Company’s nonregulated marketing operations, excluding SCANA Energy. Energy Marketing operating revenues and net income were as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 697.5	(28.9)%	$ 981.5	19.9 %	$ 818.5
Net Income	9.0	76.5 %	5.1	(16.4)%	6.1

2015 vs 2014

Operating revenues decreased due to lower industrial sales volume and lower market prices. Net income increased due to lower cost of gas and lower costs of transportation to serve customers.

2014 vs 2013

Operating revenues increased due to higher industrial sales volume and higher market prices. Net income decreased due to higher cost to serve customers during periods of pipeline constraints.

Other Operating Expenses

Other operating expenses were as follows:

Millions of dollars		2015	Change		2014	Change		2013
Other operation and maintenance	$	715.3	(1.8)%	$	728.3	2.9%	$	707.5
Depreciation and amortization		357.5	(6.8)%		383.7	1.5%		378.1
Other taxes		234.2	2.4 %		228.8	4.1%		219.7

Changes in other operating expenses are largely attributable to the electric operations and gas distribution segments and are addressed in those discussions. Additional information on a consolidated basis is provided below.

2015 vs 2014

In addition to factors discussed in the electric operations and gas distribution segments, other operation and maintenance expenses decreased by $24.2 million, depreciation and amortization decreased by $7.8 million and other taxes decreased by $8 million due to the sale of CGT.

2014 vs 2013

See discussion in the electric operations and gas distribution segments.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on the Company's income statements and balance sheets as follows:

Millions of dollars		2015	Change		2014	Change		2013
Income Statement Impact:								
Employee benefit costs	$	5.3	6.0%	$	5.0	(67.7)%	$	15.5
Other expense		1.1	*		0.2	(80.0)%		1.0
Balance Sheet Impact:								
Increase in capital expenditures		3.9	*		0.5	(93.1)%		7.2
Component of amount receivable from Summer Station co-owner		1.5	*		0.1	(96.0)%		2.5
Increase (decrease) in regulatory assets		6.2	*		(3.2)	*		5.5
Net periodic benefit cost	$	18.0	*	$	2.6	(91.8)%	$	31.7

* Greater than 100%

Pursuant to regulatory orders, SCE&G recovers current pension expense through a rate rider (for retail electric operations) and through cost of service rates (for gas operations), and amortizes pension costs previously deferred in regulatory assets as further described in Note 2 and Note 8 to the consolidated financial statements. Amounts amortized were as follows:

Millions of dollars		2015		2014		2013
Retail electric operations	$	2.0	$	2.0	$	2.0
Gas operations		1.0		1.0		0.2

Other Income (Expense)

Other income (expense) includes the results of certain incidental activities of regulated subsidiaries, the activities of certain non-regulated subsidiaries, and AFC. AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. The Company includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. Components of other income (expense) were as follows:

Millions of dollars		2015	Change		2014	Change		2013
Other income	$	74.5	(38.8)%	$	121.8	21.4%	$	100.3
Other expense		(60.1)	(6.5)%		(64.3)	41.3%		(45.5)
Gain on sale of SCI, net of transaction costs		106.6	*		—	—		—
AFC - equity funds		27.0	(17.4)%		32.7	23.4%		26.5

* Greater than 100%

2015 vs 2014

Other income decreased due primarily to the recognition of $64.0 million of gains in 2014, compared to $5.2 million in 2015, realized upon the settlement of certain interest rate contracts previously recorded as regulatory liabilities pursuant to the SCPSC orders previously discussed. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income (see electric margin discussion). Other income decreased by $18.3 million and other expenses decreased by $10.9 million due to the sale of SCI. Total other income and other expenses increased by $12.7 million for billings to DCGT for transition services provided at cost pursuant to the terms of the sale of CGT. In 2015 other income also included the gain on the sale of SCI (See Note 13 to the consolidated financial statements). AFC decreased due to lower AFC rates.

2014 vs 2013

Other income (expense) increased primarily due to the recognition of $64.0 million of gains realized upon the late 2013 settlement of certain interest rate derivative contracts previously recorded as regulatory liabilities pursuant to SCPSC orders previously discussed, compared to $50.1 million of such gains in 2013. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars		2015	Change		2014	Change		2013
Interest on long-term debt, net	$	311.3	1.5%	$	306.7	4.7%	$	292.8
Other interest expense		6.5	14.0%		5.7	23.9%		4.6
Total	$	317.8	1.7%	$	312.4	5.0%	$	297.4

Interest on long-term debt increased in each year primarily due to increased borrowings.

Income Taxes

Income tax expense increased each year primarily due to increases in income before taxes. Income before taxes, income taxes and the effective tax rate were all higher in 2015 primarily due to the sales of CGT and SCI.

LIQUIDITY AND CAPITAL RESOURCES

The Company anticipates that its contractual cash obligations will be met in 2016 through internally generated funds and additional short- and long-term borrowings. In 2017 and beyond, the Company may also meet such obligations through the sale of equity securities. The Company expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt.

Cash requirements for SCANA's regulated subsidiaries arise primarily from their operational needs, funding their construction programs and payment of dividends to SCANA. The ability of the regulated subsidiaries to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental regulations, will depend on their ability to attract the necessary financial capital on reasonable terms. Regulated subsidiaries recover the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and these subsidiaries continue their ongoing construction programs, rate increases will be sought. The future financial position and results of operations of regulated subsidiaries will be affected by their ability to obtain adequate and timely rate and other regulatory relief.

Due primarily to the availability of proceeds from the sale of two subsidiaries in the first quarter of 2015, the Company began using open market purchases for its stock plans at the end of January 2015. Prior to the use of open market purchases, SCANA common stock was acquired on behalf of participants in SCANA's Investor Plus Plan and Stock Purchase-Savings Plan through the original issuance of shares. This provided additional equity of approximately $14 million in 2015, $98 million in 2014 and $99 million in 2013. In addition, in March 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196 million.

Rating agencies consider qualitative and quantitative factors when assessing SCANA and its rated operating companies' credit ratings, including regulatory environment, capital structure and the ability to meet liquidity requirements. Changes in the regulatory environment or deterioration of the Company's commonly monitored financial credit metrics could adversely affect the Company's debt ratings. This could cause the Company to pay higher interest rates on its long- and short-term indebtedness, and could limit the Company's access to capital markets and liquidity.

Capital Expenditures

Cash outlays for property additions and construction expenditures, including nuclear fuel, were $1.2 billion in 2015. The Company's current estimates of its capital expenditures for construction and nuclear fuel for the next three years, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	2016	2017	2018
SCE&G - Normal			
Generation	$ 88	$ 130	$ 91
Transmission & Distribution	192	163	187
Other	12	9	15
Gas	61	63	60
Common	3	2	4
Total SCE&G - Normal	356	367	357
PSNC Energy	198	279	212
Other	27	30	21
Total Normal	581	676	590
New Nuclear (including transmission)	1,166	1,013	677
Cash Requirements for Construction	1,747	1,689	1,267
Nuclear Fuel	122	80	89
Total Estimated Capital Expenditures	$ 1,869	$ 1,769	$ 1,356

The Company's contractual cash obligations as of December 31, 2015 are summarized as follows:

Contractual Cash Obligations	Payments due by periods				
Millions of dollars	Total	Less than 1 year	1 - 3 years	4 - 5 years	More than 5 years
Long- and short-term debt, including interest	$ 12,599	$ 958	$ 1,635	$ 1,345	$ 8,661
Capital leases	18	6	9	1	2
Operating leases	59	10	19	6	24
Purchase obligations	4,171	1,950	2,108	112	1
Other commercial commitments	4,273	847	1,776	950	700
Total	$ 21,120	$ 3,771	$ 5,547	$ 2,414	$ 9,388

Included in the table above in purchase obligations is SCE&G's portion of a contractual agreement for the design and construction of the New Units at Summer Station. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent. SCE&G estimates it will cost $750 million to $850 million to acquire an additional 5% ownership in the New Units and has included $750 million for this purpose in other commercial commitments. See also New Nuclear Construction in Note 10 to the consolidated financial statements.

Purchase obligations include customary purchase orders under which the Company has the option to utilize certain vendors without the obligation to do so. The Company may terminate such arrangements without penalty.

Other commercial commitments includes estimated obligations under forward contracts for natural gas purchases. Such forward contracts include customary “make-whole” or default provisions, but are not considered to be “take-or-pay” contracts. Certain of these contracts relate to regulated businesses; therefore, the effects of such contracts on fuel costs are reflected in electric or gas rates. Other commercial commitments also includes a “take-and-pay” contract for natural gas which expires in 2019 and estimated obligations for coal and nuclear fuel purchases.

In addition to the contractual cash obligations above, the Company sponsors a noncontributory defined benefit pension plan and an unfunded health care and life insurance benefit plan for retirees. The pension plan is adequately funded under current regulations, and no significant contributions are anticipated for the foreseeable future. Cash payments under the postretirement health care and life insurance benefit plan were $10.3 million in 2015, and such annual payments are expected to be the same or increase to as much as $12.3 million in the future.

The Company is party to certain NYMEX natural gas futures contracts for which any unfavorable market movements are funded in cash. These derivatives are accounted for as cash flow hedges and their effects are reflected within other comprehensive income until the anticipated sales transactions occur. The Company is also party to certain interest rate derivative contracts for which unfavorable market movements above certain thresholds are funded in cash. Certain of these interest rate derivative contracts are accounted for as cash flow hedges, and others are not designated as cash flow hedges but are accounted for pursuant to regulatory orders. See further discussion at ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK and Note 6 to the consolidated financial statements. At December 31, 2015, the Company had posted $14.3 million in cash collateral for such natural gas futures contracts, and had posted $36.1 million in cash collateral related to interest rate derivative contracts.

In connection with the effectiveness of the October 2015 Amendment, SCE&G accrued within accounts payable $250 million (SCE&G's 55% share is $137.5 million) as of December 31, 2015 for the settlement and release of substantially all outstanding disputes between SCE&G and the Consortium. These amounts are not included in capital expenditures and contractual cash obligations above. See Note 10 to the consolidated financial statements.

The Company has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional AROs that are not listed in contractual cash obligations above. See Notes 1 and 10 to the consolidated financial statements. In addition, the Company has recorded liabilities for certain unrecognized tax benefits that are not included in contractual cash obligations above. See Note 5 to the consolidated financial statements.

Financing Limits and Related Matters

The Company’s issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including state public service commissions and FERC.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, banks, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

In December 2015, the Company's existing five-year committed LOCs were amended, extended and, in some cases, upsized. At December 31, 2015 SCANA, SCE&G (including Fuel Company) and PSNC Energy were parties to five-year credit agreements in the amounts of $400 million, $1.2 billion, of which $500 million relates to Fuel Company, and $200 million, respectively, which expire in December 2020. In addition, at December 31, 2015 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in December 2018. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

On January 29, 2015, SCANA entered into an unsecured, three-month credit agreement in the amount of $150 million to ensure sufficient liquidity was available to redeem its Junior Subordinated Notes on February 2, 2015. No borrowings were made under this agreement, and it expired according to its terms on February 6, 2015.

As of December 31, 2015, the Company had no outstanding borrowings under its $2.0 billion credit facilities, had approximately $531 million in commercial paper borrowings outstanding, was obligated under $3.3 million in LOC supported letters of credit, and held approximately $176 million in cash and temporary investments. The Company regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2015 were approximately $479 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2015, the Company's long-term debt portfolio has a weighted average maturity of approximately 20 years and bears an average cost of 5.8%. Substantially all of the Company's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, the Company rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

The Company's articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G's bond indenture (relating to the hereinafter defined Bonds) and PSNC Energy's note purchase and debenture purchase agreements each contain provisions that, under certain circumstances which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2015, approximately $72.4 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G's common stock.

SCANA Corporation

SCANA has an indenture which permits the issuance of unsecured debt securities from time to time including its medium-term notes. This indenture contains no specific limit on the amount of unsecured debt securities which may be issued.

South Carolina Electric & Gas Company

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2015, the Bond Ratio was 5.17.

Financing Activities

During 2015, net cash outflows related to financing activities totaled approximately $360 million, primarily associated with the repayment of long-term and short-term debt and payment of dividends, partially offset by proceeds from the issuance of long-term debt.

In May 2015, SCE&G issued $500 million of 5.1% first mortgage bonds due June 1, 2065. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

On February 2, 2015, SCANA redeemed prior to maturity $150 million of its 7.70% junior subordinated notes at their face value.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

Investing Activities

To settle interest rate derivative contracts, the Company paid approximately $253 million, net, in 2015, approximately $95 million in 2014 and approximately $6 million, net, through the third quarter of 2013. During the fourth quarter of 2013, the Company received approximately $120 million upon the settlement of interest rate derivatives.

For additional information, see Note 4 to the consolidated financial statements.

Major tax incentives included within federal legislation resulted in the allowance of bonus depreciation for property placed in service in 2008 through 2015. These incentives, along with certain other deductions, have had a positive impact on the cash flows of the Company. Bonus depreciation will also be significant for 2016 through 2019 under recent law.

Ratios of earnings to fixed charges for each of the five years ended December 31, 2015, were as follows:

December 31,	2015	2014	2013	2012	2011
SCANA	4.40	3.39	3.22	2.93	2.87

The ratio for 2015 reflects the impact of gains recorded upon the sale of certain subsidiaries. See Note 13 to the consolidated financial statements.

NEW NUCLEAR CONSTRUCTION MATTERS

For a discussion of developments related to new nuclear construction, see Note 2 and Note 10 to the consolidated financial statements.

ENVIRONMENTAL MATTERS

The Company's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on the Company's financial condition, results of operations and cash flows. In addition, the Company often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, the Company expects to recover such expenditures and costs through existing ratemaking provisions.

For the three years ended December 31, 2015, the Company's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $41.4 million. During this same period, the Company expended approximately $38.5 million for the construction and retirement of landfills and ash ponds, net of disposal proceeds. In addition, the Company made expenditures to operate and maintain environmental control equipment at its fossil plants of $8.7 million in 2015, $9.1 million in 2014 and $9.2 million in 2013, which are included in other operation and maintenance expense, and made expenditures to handle waste ash, net of disposal proceeds, of $1.3 million in 2015, $1.6 million in 2014 and $3.2 million in 2013, which are included in fuel used in electric generation. In addition, included within other operation and maintenance expense is an annual amortization of $1.4 million in each of 2015, 2014 and 2013 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for the Company are $15.3 million for 2016 and $88.9 million for the four-year period 2017-2020. These expenditures are included in the Company's Estimated Capital Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though the Company cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, SCANA, SCE&G and GENCO are subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. The Company cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact the Company, and the following discussion should not be considered all-inclusive.

Physical effects associated with climate changes could include changes in weather patterns, such as storm frequency and intensity, and any resultant damage to the Company's electric system, as well as impacts on employees and customers and on the Company's supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations, all in order to allow the Company to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Environmental commitments and contingencies are further described in Note 10 to the consolidated financial statements.

REGULATORY MATTERS

SCANA and its subsidiaries are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCANA	The SEC as to the issuance of certain securities and other matters and the FERC as to certain acquisitions and other matters.
SCANA and all subsidiaries	The CFTC, under Dodd-Frank, concerning recordkeeping, reporting, and other related regulations associated with swaps, options, forward contracts, and trade options, to the extent SCANA and any of its subsidiaries engage in any such activities.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions, wholesale electric power and transmission rates and services, and other matters; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the wholesale sale of electric energy, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to issuance of short-term borrowings, the wholesale sale of electric energy, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.
PSNC Energy	The NCUC as to gas rates, service, issuance of securities (other than notes with a maturity of two years or less or renewals of notes with a maturity of six years or less), accounting and other matters, and the SEC as to the issuance of certain securities.

SCE&G and PSNC Energy	The PHMSA and the DOT as to federal pipeline safety requirements for gas distribution pipeline systems and natural gas transmission systems, respectively. The ORS and the NCUC are responsible for enforcement of federal and state pipeline safety requirement in South Carolina (SCE&G) and North Carolina (PSNC Energy), respectively.
SCANA Energy	The GPSC through its certification as a natural gas marketer in Georgia and specifically as to retail prices for customers served under its regulated provider contract.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

SCE&G's electric transmission system is subject to NERC, which develops and enforces reliability standards for the bulk power systems throughout North America. NERC is subject to oversight by FERC.

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. The Company has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. The Company is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of the Company's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Accounting for Rate Regulated Operations

SCANA's regulated utilities record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, the Company may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of the Company's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of the Company's regulatory assets and liabilities.

The Company's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, the Company could be required to write down its investment in those assets. The Company cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect the Company's results of operations in the period in which they would be recorded. As of December 31, 2015, the Company's net investments in fossil/hydro and nuclear generation assets were approximately $2.3 billion and $4.1 billion, respectively.

In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, the Company could also be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the Company's results of operations, liquidity or financial position in the period the write-off would be recorded.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers of the Company's utilities and retail gas operations are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, the Company records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization or other regulatory provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. Accounts receivable included unbilled revenues of $129.1 million at December 31, 2015 and $186.4 million at December 31, 2014, compared to total revenues of $4.4 billion in 2015 and $5.0 billion in 2014.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G's accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and the estimated timing of cash flows. Changes in any of these estimates could significantly impact the Company's financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Asset Retirement Obligations

The Company accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from the acquisition, construction, development and normal operation in accordance with applicable accounting guidance. The Company recognizes obligations at present value in the period in which they are incurred, and capitalizes associated asset retirement costs as a part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to the Company's regulated utility operations, their recognition has no significant impact on results of operations. As of December 31, 2015, the Company has recorded AROs of $176 million for nuclear plant decommissioning (as discussed above) and AROs of $344 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts are based upon estimates which are subject to varying degrees of imprecision, particularly since payments in settlement of such obligations may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for the utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

The Company recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. Accounting guidance requires the use of several assumptions that impact pension cost, of which the discount rate and the expected return on assets are the most sensitive. Net pension cost of $18.0 million recorded in 2015 reflects the use of a 4.20% discount rate derived using a cash flow matching technique, and an assumed 7.5% long-term rate of return on plan assets. The Company believes that these assumptions and the resulting pension cost amount were reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2015 would have increased the Company's pension cost by $1.9 million and increased the pension obligation by $26.8 million. Further, had the assumed long-term rate of return on assets been 7.25%, the Company's pension cost for 2015 would have increased by $2.1 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

The Company determines the fair value of the majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, the Company evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2015, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.0%, 5.4%, 8.7% and 8.8%, respectively. The 2015 expected long-term rate of return of 7.50% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2016, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 5.3%, 4.6%, 7.2% and 8.7%, respectively. For 2016, the expected rate of return is 7.50%.

Pursuant to regulatory orders, certain previously deferred pension costs are being amortized as described in Note 2 to the consolidated financial statements. Current pension expense for electric operations is being recovered through a pension cost rider, and current pension expense related to SCE&G's gas operations is being recovered through cost of service rates.

Pension benefits are not offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, the significance of pension costs and the criticality of the related estimates to the Company's financial statements will continue to diminish. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

The Company accounts for the cost of its postretirement medical and life insurance benefit plan in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. The Company used a discount rate of 4.30%, derived using a cash flow matching technique, and recorded a net cost of $19.2 million for 2015. Had the selected discount rate been 4.05% (25 basis points lower than the discount rate referenced above), the expense for 2015 would have been $0.8 million higher and increased the obligation by $9.5 million. Because the plan provisions include "caps" on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

OTHER MATTERS

Off-Balance Sheet Arrangements

SCANA holds insignificant investments in securities and business ventures. SCANA does not engage in significant off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment, airplanes and rail cars.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments described in this section are held for purposes other than trading.

Interest Rate Risk

The tables below provide information about long-term debt issued by the Company and other financial instruments that are sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average interest rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

December 31, 2015	Expected Maturity Date							
Millions of dollars	2016	2017	2018	2019	2020	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	111.5	10.6	719.8	9.1	358.3	4,673.0	5,882.3	6,336.2
Average Fixed Interest Rate (%)	1.16	4.42	6.02	4.73	6.35	5.63	5.63	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	129.4	151.4	145.5
Average Variable Interest Rate (%)	1.11	1.11	1.11	1.11	1.11	0.55	0.63	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	654.4	554.4	4.4	4.4	4.4	133.0	1,355.0	(72.1)
Average Pay Interest Rate (%)	2.89	2.91	6.17	6.17	6.17	4.62	3.10	—
Average Receive Interest Rate (%)	0.62	0.62	1.11	1.11	1.11	0.52	0.61	—

December 31, 2014	Expected Maturity Date							
Millions of dollars	2015	2016	2017	2018	2019	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	161.5	110.4	9.5	718.6	8.1	4,529.7	5,537.9	6,437.4
Average Fixed Interest Rate (%)	7.48	1.14	4.62	5.95	4.97	5.29	5.35	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	133.8	155.8	151.2
Average Variable Interest Rate (%)	0.92	0.92	0.92	0.92	0.92	0.48	0.54	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	954.4	104.4	4.4	4.4	4.4	133.8	1,205.8	(256.7)
Average Pay Interest Rate (%)	3.84	3.74	6.17	6.17	6.17	4.70	3.95	—
Average Receive Interest Rate (%)	0.26	0.28	0.92	0.92	0.92	0.47	0.29	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

For further discussion of the Company's long-term debt and interest rate derivatives, see ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

Commodity Price Risk

The following table provides information about the Company's financial instruments that are sensitive to changes in natural gas prices. Weighted average settlement prices are per 10,000 MMBTU. Fair value represents quoted market prices.

Expected Maturity	2016	2017	2018
Futures - Long			
Settlement Price (a)	2.45	2.82	—
Contract Amount (b)	24.4	3.0	—
Fair Value (b)	21.4	2.9	—
Futures - Short			
Settlement Price (a)	2.49	—	—
Contract Amount (b)	1.7	—	—
Fair Value (b)	1.5	—	—
Options - Purchased Call (Long)			
Strike Price (a)	3.31	3.03	—

Swaps - Basis			
Pay variable/receive variable (b)	3.9	0.7	—
Average pay rate (a)	2.4630	2.8231	—
Average received rate (a)	2.4432	2.8281	—
Fair Value (b)	3.9	0.7	—

(a) Weighted average, in dollars
(b) Millions of dollars

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. See Note 6 to the consolidated financial statements. The information above includes those financial positions of Energy Marketing and PSNC Energy.

PSNC Energy utilizes futures, options and swaps to hedge gas purchasing activities. PSNC Energy's tariffs include a provision for the recovery of actual gas costs incurred. PSNC Energy defers premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program for subsequent recovery from customers.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2015 and 2014, and the related consolidated statements of income, comprehensive income, cash flows, and changes in common equity for each of the three years in the period ended December 31, 2015. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2015 and 2014, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2015, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2015, based on the criteria established in *Internal Control-Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 26, 2016 expressed an unqualified opinion on the Company's internal control over financial reporting.

Dividends declared per share of common stock were $2.18, $2.10 and $2.03 for 2015, 2014 and 2013, respectively.

See Notes to Consolidated Financial Statements.

Notes to Consolidated Financial Statements

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCANA, a South Carolina corporation, is a holding company. The Company engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina, the purchase, sale and transportation of natural gas to wholesale and retail customers in South Carolina, North Carolina and Georgia and conducts other energy-related business.

The accompanying consolidated financial statements reflect the accounts of SCANA, the following wholly-owned subsidiaries, and subsidiaries that formerly were wholly-owned during the periods presented.

Regulated businesses	Nonregulated businesses
South Carolina Electric & Gas Company	SCANA Energy Marketing, Inc.
South Carolina Fuel Company, Inc.	ServiceCare, Inc.
South Carolina Generating Company, Inc.	SCANA Services, Inc.
Public Service Company of North Carolina, Incorporated	SCANA Corporate Security Services, Inc.

CGT and SCI were sold in the first quarter of 2015. Accordingly, the assets and liabilities of these entities are aggregated and shown as Assets held for sale and Liabilities held for sale in the December 31, 2014 consolidated balance sheet. See Note 13.

The Company reports certain investments using the cost or equity method of accounting, as appropriate. Intercompany balances and transactions have been eliminated in consolidation, with the exception of profits on intercompany sales to regulated affiliates if the sales price is reasonable and the future recovery of the sales price through the rate-making process is probable, as permitted by accounting guidance.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Reclassifications

In April 2015, the FASB issued accounting guidance intended to simplify the presentation of debt issuance costs by requiring that such costs be deducted from carrying amounts related to debt when presented in the balance sheet. As permitted, the Company adopted this guidance retrospectively in the fourth quarter of 2015. As a result, for 2014 $34 million of unamortized debt issuance costs were reclassified to long-term debt, and certain amounts in Note 4 and Note 12 were also reclassified for comparative periods. The effect of adoption on the Company’s results of operations and cash flows was not significant.

In November 2015, the FASB issued accounting guidance intended to simplify the presentation of deferred tax assets and deferred tax liabilities by netting and classifying them as noncurrent on the statement of financial position. As permitted, the Company early adopted this guidance retrospectively in the fourth quarter of 2015. As a result, for 2014 $65.5 million of net deferred tax liabilities previously classified in current liabilities were reclassified to long-term liabilities. The effect of adoption on the Company's results of operations and cash flows was not significant.

Utility Plant

Utility plant is stated at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset’s life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. The Company's regulated subsidiaries calculated AFC using average composite rates of 6.1% for 2015, 7.2% for 2014 and 6.9% for 2013. These rates do not exceed the maximum rates allowed in the various regulatory jurisdictions. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

The Company records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. In 2015, SCE&G adopted lower depreciation rates for electric and common plant, as approved by the SCPSC and further described in Note 2. In addition, CGT was sold in the first quarter of 2015 (see Note 13) and excluded from the 2015 calculation of composite weighted average depreciation rates. The composite weighted average depreciation rates for utility plant assets were as follows:

	2015	2014	2013
SCE&G	2.55%	2.85%	2.96%
GENCO	2.66%	2.66%	2.66%
CGT	—	2.11%	2.19%
PSNC Energy	2.94%	2.98%	3.01%
Weighted average of above	2.61%	2.84%	2.93%

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in "Fuel used in electric generation" and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2015		2014	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.2 billion	—	$ 1.2 billion	—
Accumulated depreciation	$ 620.4 million	—	$ 578.3 million	—
Construction work in progress	$ 214.6 million	$ 3.4 billion	$ 199.3 million	$ 2.7 billion

For a discussion of expected cash outlays and expected in-service dates for the New Units and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within other receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $178.8 million at December 31, 2015 and $88.9 million at December 31, 2014.

Plant to be Retired

At December 31, 2014, SCE&G expected to retire three units that are or were coal-fired by 2020, which was prior to the end of the previously estimated useful lives over which the units were being depreciated. As such, these units were identified as Plant to be Retired. Subsequently, these units were converted to be gas-fired. In the third quarter of 2015, in connection with the adoption of a customary depreciation study and related analysis (see Note 2), SCE&G determined that these units would not likely be retired by 2020, and their depreciation rates were set to recover the units' net carrying value over their respective revised useful lives. Accordingly, the net carrying value of these units is no longer classified as Plant to be Retired at December 31, 2015.

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections is classified as a regulatory asset or regulatory liability on the consolidated balance sheet. Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2015 and 2014, SCE&G incurred $16.5 million and $19.4 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. As approved by the SCPSC, effective January 1, 2013, SCE&G accrues $1.4 million per month for its portion of the nuclear refueling outages that are scheduled for the spring of 2014 through the spring of 2020. Total costs for 2014 were $43.7 million, of which SCE&G was responsible for $29.1 million. Total costs for 2015 were $40.2 million, of which SCE&G was responsible for $26.8 million.

Goodwill

The Company considers certain amounts categorized by FERC as “acquisition adjustments” to be goodwill. For each period presented, assets with a carrying value of $210 million (net of a writedown taken in 2002 of $230 million) for PSNC Energy (Gas Distribution segment) were classified as goodwill. The Company tests goodwill for impairment annually as of January 1, unless indicators, events or circumstances require interim testing to be performed. The goodwill impairment testing is generally a two-step quantitative process which in step one requires estimation of the fair value of the reporting unit and the comparison of that amount to its carrying value. If this step indicates an impairment (a carrying value in excess of fair value), then step two, measurement of the amount of the goodwill impairment (if any), is required. Accounting guidance adopted by the Company gives it the option to first perform a qualitative assessment of impairment. Based on this qualitative ("step zero") assessment, if the Company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, the Company is not required to proceed with the two-step quantitative assessment.

In evaluations of PSNC Energy, fair value was estimated using the assistance of an independent appraisal. In evaluations for the periods presented, step one has indicated no impairment, and no impairment charges have been recorded. Should a write-down be required in the future, such a charge would be treated as an operating expense.

Nuclear Decommissioning

Based on a decommissioning cost study, SCE&G’s two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G’s method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each period presented) are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

The Company considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Receivables

Customer receivables reflect amounts due from customers arising from the delivery of energy or related services and include both billed and unbilled amounts earned pursuant to revenue recognition practices described below. Customer receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.
Other receivables consist primarily of amounts due from Santee Cooper related to the construction and operation of jointly owned nuclear generating facilities at Summer Station.

Inventories

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas, fuel oil and emission allowances. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC or NCUC, as applicable.

Asset Management and Supply Service Agreements

PSNC Energy utilizes asset management and supply service agreements with counterparties for certain natural gas storage facilities. Such counterparties held 46% and 48% of PSNC Energy’s natural gas inventory at December 31, 2015 and December 31, 2014, respectively, with a carrying value of $17.7 million and $26.1 million, respectively, through either capacity release or agency relationships. Under the terms of the asset management agreements, PSNC Energy receives storage asset management fees. No fees are received under supply service agreements. The agreements expire March 31, 2017.

Income Taxes

The Company files consolidated federal income tax returns. Under a joint consolidated income tax allocation agreement, each subsidiary’s current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers of the Company’s regulated subsidiaries; otherwise, they are charged or credited to income tax expense.

Regulatory Assets and Regulatory Liabilities

The Company’s rate-regulated utilities record costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or record revenue in a period different from the period in which the revenue would be recorded by a nonregulated enterprise. These expenses deferred for future recovery from customers or obligations to be refunded to customers are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs or revenues in the ratemaking process. Deferred amounts expected to be recovered or repaid within 12 months are classified in the balance sheet as receivables or accounts payable, respectively.

Debt Issuance Premiums, Discounts and Other Costs

The Company presents long-term debt premiums, discounts and debt issuance costs within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. For regulated subsidiaries, gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are expensed as incurred.

Income Statement Presentation

The Company presents the revenues and expenses of its regulated businesses and its retail natural gas marketing businesses (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense). Consistent with this presentation, the gain on the sale of CGT is reflected within operating income and the gain on the sale of SCI is reflected within other income (expense).

Revenue Recognition

The Company records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $129.1 million at December 31, 2015 and $186.4 million at December 31, 2014.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. The SCPSC establishes this component during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

SCE&G customers subject to a PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor. PSNC Energy’s PGA mechanism authorized by the NCUC allows the recovery of all prudently incurred gas costs, including the results of its hedging program, from customers. Any difference between actual gas costs and amounts contained in rates is deferred and included when establishing gas costs during subsequent PGA filings or in annual prudence reviews.

SCE&G’s gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. An eWNA for SCE&G's electric customers was discontinued effective with the first billing cycle of 2014 as approved by the SCPSC.

PSNC Energy is authorized by the NCUC to utilize a CUT which allows it to adjust base rates semi-annually for residential and commercial customers based on average per customer consumption, whether impacted by weather or other factors.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

Earnings Per Share

The Company computes basic earnings per share by dividing net income by the weighted average number of common shares outstanding for the period. The Company computes diluted earnings per share using this same formula, after giving effect to securities considered to be dilutive potential common stock utilizing the treasury stock method.

The weighted average number of common shares for each period presented for basic and diluted earnings per share purposes were identical, except that for 2013, the net effect of equity forward contracts resulted in such shares for diluted earnings per share purposes being 0.4 million higher than for basic earnings per share purposes.

New Accounting Matters

In April 2014, the FASB issued accounting guidance for reporting discontinued operations and disclosures of disposals of components of an entity. Under this guidance, only those discontinued operations which represent a strategic shift that will have a major effect on an entity’s operations and financial results should be reported as discontinued operations in the financial statements. As permitted, the Company adopted this guidance for the period ended December 31, 2014.

In May 2014, the FASB issued accounting guidance for revenue arising from contracts with customers that supersedes most current revenue recognition guidance, including industry-specific guidance. This revenue recognition model provides a five-step analysis in determining when and how revenue is recognized, and will require revenue recognition to depict the transfer of promised goods or services to customers in an amount that reflects the consideration a company expects to receive in exchange for those goods or services. The Company is required to adopt this guidance in the first quarter of 2018 and early adoption is permitted in the first quarter of 2017. Adoption using a retrospective method is required, with options to elect certain practical expedients or to recognize a cumulative effect in the year of initial adoption. The Company has not determined when it will adopt this guidance or what elections it will make. The Company has not determined the impact this guidance will have on its results of operations, cash flows or financial position.

In April 2015, the FASB issued accounting guidance related to fees paid by a customer in a cloud computing arrangement. Among other things, the guidance clarifies how to account for a software license element included in a cloud computing arrangement, and makes explicit that a cloud computing arrangement not containing a software license element should be accounted for as a service contract. The Company has determined that this guidance, when adopted in the first quarter of 2016, will not significantly impact the Company's results of operations, cash flows or financial position.

In July 2015, the FASB issued accounting guidance intended to simplify the subsequent measurement of inventory cost by requiring most inventory to be measured at the lower of cost and net realizable value. The Company expects to adopt this guidance when required in the first quarter of 2017. The Company is evaluating this guidance and has not determined what impact it will have on its results of operations, cash flows or financial position.

In January 2016, the FASB issued accounting guidance intended to clarify the classification and measurement of financial instruments and financial liabilities, among other things. The Company expects to adopt this guidance when required in the first quarter of 2018. The Company is evaluating this guidance and has not determined what impact it will have on its results of operations, cash flows or financial position.

In February 2016, the FASB issued accounting guidance related to the recognition, measurement and presentation of leases. The guidance applies a right-of-use model and, for lessees, requires all leases with a duration over twelve months to be recorded on the balance sheet, with the rights of use treated as assets and the payment obligations treated as liabilities. Further, and without consideration of any regulatory accounting requirements which may apply, depending primarily of the nature of the assets and the relative consumption of them, lease costs will be recognized either through the separate amortization of the right-of-use asset and the recognition of the interest cost related to the payment obligation, or through the recording of a combined straight-line rental expense. For lessors, the guidance calls for the recognition of income either through the derecognition of assets and subsequent recording of interest income on lease amounts receivable, or through the recognition of rental income on a straight line basis, also depending on the nature of the assets and relative consumption. The guidance will be effective for years beginning in 2019. The Company has not determined what impact this guidance will have on its results of operations, cash flows or financial position.

2. RATE AND OTHER REGULATORY MATTERS

Rate Matters

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased by SCE&G.

Pursuant to a November 2013 SCPSC accounting order, the Company's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

Pursuant to an April 2014 SCPSC order, SCE&G increased its base fuel cost component by approximately $10.3 million for the 12-month period beginning with the first billing cycle of May 2014. The base fuel cost increase was offset by a reduction in SCE&G's rate rider related to pension costs approved by the SCPSC in March 2014. In addition, pursuant to the April 2014 order, electric revenue for 2014 was reduced by approximately $46 million for adjustments to the fuel cost component and related under-collected fuel balance. Such adjustments are fully offset by the recognition within other income of gains realized from the late 2013 settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. The order also provided for the accrual of certain debt-related carrying costs on its under-collected balance of base fuel costs from May 1, 2014 through April 30, 2015.

The cost of fuel includes amounts paid by SCE&G pursuant to the Nuclear Waste Act for the disposal of spent nuclear fuel. As a result of a November 2013 decision by the Court of Appeals, the DOE set the Nuclear Waste Act fee to zero effective May 16, 2014. The impact of changes to the Nuclear Waste Act fee is considered during annual fuel rate proceedings.

By order dated April 30, 2015, the SCPSC approved a settlement agreement among SCE&G and certain other parties in which SCE&G agreed to decrease the total fuel cost component of retail electric rates. Under this order, SCE&G is to recover an amount equal to its under-collected balance of base fuel and variable environmental costs as of April 30, 2015, over the subsequent 12-month period beginning with the first billing cycle of May 2015.

By order dated July 15, 2015, the SCPSC approved a settlement agreement among SCE&G and certain other parties concerning SCE&G's petition for approval to participate in a DER program and to recover DER program costs as a separate component of SCE&G's overall fuel factor. Under this order, SCE&G will, among other things, implement programs to encourage the development of renewable energy facilities with a total nameplate capacity of at least approximately 84.5 MW by the end of 2020, of which half is to be customer-scale solar capacity and half is to be utility-scale solar capacity. SCE&G is to make a good faith effort to have at least 30 MW of utility-scale solar capacity in service by the end of 2016.

By order dated September 16, 2015, the SCPSC approved SCE&G's request to adopt lower depreciation rates for electric and common plant effective January 1, 2015. These rates were based on the results of a depreciation study conducted by SCE&G using utility plant balances as of December 31, 2014. In connection with the adoption of the revised depreciation rates, SCE&G recorded lower depreciation expense of approximately $29 million ($.12 per share) in 2015, and pursuant to the SCPSC order, SCE&G reduced its electric operating revenues by approximately $14.5 million ($.06 per share) with an offset to under-collected fuel included within Receivables in the balance sheet. Accordingly, the Company's net income for 2015 increased approximately $9.8 million as a result of this change in estimate.

In October 2015, the SCPSC initiated its 2016 annual review of base rates for fuel costs. A public hearing for this annual review is scheduled for April 7, 2016.

Electric - Base Rates

Prior to 2014, certain of SCE&G's electric rates included an adjustment for eWNA. The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition. In connection with the termination of the eWNA effective December 31, 2013, and pursuant to an SCPSC order, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. This revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives, which gains had been deferred as a regulatory liability.

Pursuant to an SCPSC order, SCE&G removes from rate base deferred income tax assets arising from capital expenditures related to the New Units and accrues carrying costs on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G’s weighted average long-term debt borrowing rate and are recorded as a regulatory asset and other income. Carrying costs totaled $9.5 million and $5.8 million during 2015 and 2014, respectively. SCE&G anticipates that when the New Units are placed in service and accelerated tax depreciation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

The SCPSC has approved a suite of DSM Programs for development and implementation. SCE&G offers to its retail electric customers several distinct programs designed to assist customers in reducing their demand for electricity and improving their energy efficiency. SCE&G submits annual filings to the SCPSC related to these programs which include actual program costs, net lost revenues (both forecasted and actual), customer incentives, and net program benefits, among other things. As actual DSM Program costs are incurred, they are deferred as regulatory assets and recovered through a rate rider approved by the SCPSC. The rate rider also provides for recovery of net lost revenues and for a shared savings incentive. The SCPSC approved the following rate riders pursuant to the annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2015	First billing cycle of May	$32.0 million
2014	First billing cycle of May	$15.4 million
2013	First billing cycle of May	$16.9 million

In April 2014, the SCPSC issued an order approving, among other things, SCE&G’s request to utilize approximately $17.8 million of the gains from the late 2013 settlement of certain interest rate derivative instruments, previously deferred as regulatory liabilities, to offset a portion of SCE&G’s DSM Programs rate rider. This order also allowed SCE&G to apply $5.0 million of its storm damage reserve and $5.0 million of the gains from the settlement of certain interest rate derivative instruments to offset previously deferred amounts.

In January 2016, SCE&G submitted its annual DSM Programs filing to the SCPSC. If approved, the filing would allow recovery of $37.6 million of costs and net lost revenues associated with the DSM Programs, along with an incentive to invest in such programs.

Electric - BLRA

Under the BLRA, SCE&G may file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Through 2015, requested rate adjustments have been based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved recovery of the following amounts under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	**Increase**	**Amount**
2015	2.6%	$64.5 million
2014	2.8%	$66.2 million
2013	2.9%	$67.2 million

In September 2015, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%. This revised return on equity will be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016, until such time as the New Units are completed. See Note 10.

Gas - SCE&G

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	**Action**	**Amount**
2015	No change	—
2014	0.6% Decrease	$2.6 million
2013	No change	—

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred, including transportation costs. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2015 and 2014 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each of the review periods were reasonable and prudent.

Gas - PSNC Energy

PSNC Energy's Rider D rate mechanism allows it to recover from customers all prudently incurred gas costs and certain related uncollectible expenses as well as losses on negotiated gas and transportation sales.

PSNC Energy establishes rates using a benchmark cost of gas approved by the NCUC, which may be periodically adjusted to reflect changes in the market price of natural gas. PSNC Energy revises its tariffs as necessary to track these changes and accounts for any over- or under-collection of the delivered cost of gas in its deferred accounts for subsequent rate consideration. The NCUC reviews PSNC Energy's gas purchasing practices annually. In addition, PSNC Energy utilizes a CUT which allows it to adjust its base rates semi-annually for residential and commercial customers based on average per customer consumption.

In October 2015, in connection with PSNC Energy's 2015 Annual Prudence Review, the NCUC determined that PSNC Energy's gas costs, including all hedging transactions, were reasonable and prudently incurred during the 12 months ended March 31, 2015.

In May 2014, the NCUC issued an order requiring utilities to adjust rates to reflect changes in the state corporate income tax rate that had been enacted by the North Carolina legislature and to file a proposal to refund amounts previously collected on a provisional basis. Pursuant to the order, PSNC Energy lowered its rates effective July 1, 2014, and refunded the amounts previously collected through the normal operation of its Rider D rate mechanism. These amounts were not significant for any period presented.

Regulatory Assets and Regulatory Liabilities

The Company's cost-based, rate-regulated utilities recognize in their financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, the Company has recorded regulatory assets and regulatory liabilities which are summarized in the following tables. Other than unrecovered plant, substantially all regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

	December 31,	
Millions of dollars	**2015**	**2014**
Regulatory Assets:		
Accumulated deferred income taxes	$ 298	$ 284
AROs and related funding	405	366
Deferred employee benefit plan costs	325	350
Deferred losses on interest rate derivatives	535	453
Unrecovered plant	127	137
Environmental remediation costs	42	40
DSM Programs	61	56
Other	144	137
Total Regulatory Assets	$ 1,937	$ 1,823
Regulatory Liabilities:		
Asset removal costs	$ 732	$ 703
Deferred gains on interest rate derivatives	96	82
Other	27	29
Total Regulatory Liabilities	$ 855	$ 814

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to AFC and are expected to be recovered over the remaining lives of the related property which may range up to approximately 85 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 110 years.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under GAAP. Deferred employee benefit plan costs represent amounts of pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. Accordingly, in 2013 SCE&G began recovering through utility rates approximately $63 million of deferred pension costs for electric operations over approximately 30 years and approximately $14 million of deferred pension costs for gas operations over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments made or received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt through 2043. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense through 2065 except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G will amortize these amounts through cost of service rates over the units' previous estimated remaining useful lives through approximately 2025. Unamortized amounts are included in rate base and are earning a current return.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by the Company, and are expected to be recovered over periods of up to approximately 24 years.

DSM Programs represent deferred costs associated with such programs. As a result of the April 2015 SCPSC order, deferred costs are currently being recovered over approximately five years through an approved rate rider.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the removal of assets in the future.

The SCPSC, the NCUC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC, the NCUC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by the Company. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, the Company could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the Company's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. COMMON EQUITY

The Company’s articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture and PSNC Energy’s note purchase and debenture purchase agreements each contain provisions that, under certain circumstances, which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2015 and 2014, retained earnings of approximately $72.4 million and $67.7 million, respectively, were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

Authorized shares of common stock were 200 million as of December 31, 2015 and 2014.

SCANA issued common stock valued at $14.3 million, $99.3 million and $100.9 million (when issued) during the years ended December 31, 2015, 2014 and 2013, respectively, to satisfy the requirements of various compensation and dividend reinvestment plans. In addition, in March 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196.2 million.

4. LONG-TERM AND SHORT-TERM DEBT

Total long-term debt, net reflects the retrospective adoption of accounting guidance for unamortized debt issuance costs in the fourth quarter of 2015 (see Note 1). Long-term debt by type with related weighted average effective interest rates and maturities at December 31 is as follows:

		2015		2014	
Dollars in millions	**Maturity**	**Balance**	**Rate**	**Balance**	**Rate**
SCANA Medium Term Notes (unsecured)	2020 - 2022	$ 800	5.42%	$ 800	5.42%
SCANA Senior Notes (unsecured) (a)	2016 - 2034	84	1.11%	88	0.93%
SCE&G First Mortgage Bonds (secured)	2018 - 2065	4,340	5.78%	3,840	5.56%
GENCO Notes (secured)	2016 - 2024	220	5.92%	227	5.90%
Industrial and Pollution Control Bonds (b)	2028 - 2038	122	3.51%	122	3.51%
PSNC Senior Debentures	2020 - 2026	350	5.93%	350	5.93%
Nuclear Fuel Financing	2016	100	0.78%	100	0.78%
Other (c)	2016 - 2027	18	2.72%	167	7.39%
Total debt		6,034		5,694	
Current maturities of long-term debt		(116)		(166)	
Unamortized premium, net		—		3	
Unamortized debt issuance costs		(36)		(34)	
Total long-term debt, net		$ 5,882		$ 5,497	

(a) Variable rate notes hedged by a fixed interest rate swap (fixed rate of 6.17%).
(b) Includes variable rate debt of $67.8 million at December 31, 2015 (rate of 0.03%) and 2014 (rate of 0.04%) which are hedged by fixed swaps.
(c) Includes Junior Subordinated Notes redeemed at par prior to maturity on February 2, 2015, and included in the current portion of long-term debt on the balance sheet at December 31, 2014.

In May 2015, SCE&G issued $500 million of 5.1% first mortgage bonds due June 1, 2065. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

Long-term debt maturities will be $116 million in 2016, $15 million in 2017, $724 million in 2018, $13 million in 2019 and $363 million in 2020.

Substantially all electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2015, the Bond Ratio was 5.17.

Lines of Credit and Short-Term Borrowings

At December 31, 2015 and 2014, SCANA, SCE&G (including Fuel Company) and PSNC Energy had available the following committed LOC and had outstanding the following LOC-related obligations and commercial paper borrowings:

	SCANA		SCE&G		PSNC Energy	
Millions of dollars	**2015**	**2014**	**2015**	**2014**	**2015**	**2014**
Lines of Credit:						
Total committed long-term	$ 400	$ 300	$ 1,400	$ 1,400	$ 200	$ 100
Outstanding commercial paper (270 or fewer days)	$ 37	$ 179	$ 420	$ 709	$ 74	$ 30
Weighted average interest rate	1.19%	0.54%	0.74%	0.52%	0.77%	0.65%
Letters of credit supported by LOC	$ 3	$ 3	$ 0.3	$ 0.3	—	—
Available	$ 360	$ 118	$ 980	$ 691	$ 126	$ 70

SCANA, SCE&G (including Fuel Company) and PSNC Energy are parties to five-year credit agreements in the amounts of $400 million, $1.2 billion (of which $500 million relates to Fuel Company) and $200 million, respectively. In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In December 2015, the term of the five-year agreements was amended and extended by one year, such that they expire in December 2020. The three-year agreement expires in December 2018. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N.A. and Morgan Stanley Bank, N.A. each provide 9.5% of the aggregate credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch, UBS Loan Finance LLC, MUFG Union Bank, N.A., and Branch Banking and Trust Company each provide 7.9%, and Royal Bank of Canada and U.S. Bank National Association each provide 5.5%. Two other banks provide the remaining support. The Company pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

On January 29, 2015, SCANA entered into an unsecured, three-month credit agreement in the amount of $150 million. SCANA entered this agreement to ensure sufficient liquidity was available to redeem its junior subordinated notes on February 2, 2015. No borrowings were made under this agreement, and it expired according to its terms on February 6, 2015.

The Company is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by TD Bank N.A. The letters of credit expire, subject to renewal, in the fourth quarter of 2019.

5. INCOME TAXES

Components of income tax expense are as follows:

Millions of dollars	**2015**	**2014**	**2013**
Current taxes:			
Federal	$ 382	$ 38	$ 161
State	57	(4)	17
Total current taxes	439	34	178
Deferred tax (benefit) expense, net:			
Federal	(36)	184	39
State	(7)	34	10
Total deferred taxes	(43)	218	49
Investment tax credits:			
Amortization of amounts deferred-state	(1)	(1)	(1)
Amortization of amounts deferred-federal	(2)	(3)	(3)
Total investment tax credits	(3)	(4)	(4)
Total income tax expense	$ 393	$ 248	$ 223

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2015	2014	2013
Net income	$ 746	$ 538	$ 471
Income tax expense	393	248	223
Total pre-tax income	$ 1,139	$ 786	$ 694
Income taxes on above at statutory federal income tax rate	$ 399	$ 275	$ 243
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	38	24	22
State investment tax credits (less federal income tax effect)	(6)	(5)	(5)
Allowance for equity funds used during construction	(9)	(11)	(9)
Deductible dividends—401(k) Retirement Savings Plan	(10)	(10)	(10)
Amortization of federal investment tax credits	(2)	(3)	(3)
Section 41 tax credits	1	(3)	—
Section 45 tax credits	(9)	(9)	(5)
Domestic production activities deduction	(18)	(7)	(11)
Realization of basis differences upon sale of subsidiaries	7	—	—
Other differences, net	2	(3)	1
Total income tax expense	$ 393	$ 248	$ 223

The tax effects of significant temporary differences comprising the Company’s net deferred tax liability are as follows:

Millions of dollars	2015	2014
Deferred tax assets:		
Nondeductible accruals	$ 135	$ 127
Asset retirement obligation, including nuclear decommissioning	199	216
Financial instruments	35	40
Unamortized investment tax credits	16	17
Deferred fuel costs	8	—
Monetization of bankruptcy claim	—	10
Other	5	10
Total deferred tax assets	398	420
Deferred tax liabilities:		
Property, plant and equipment	$ 1,906	$ 1,928
Deferred employee benefit plan costs	96	107
Regulatory asset, asset retirement obligation	135	122
Deferred fuel costs	—	27
Regulatory asset, unrecovered plant	49	53
Regulatory asset, net loss on interest rate derivative contracts settlement	—	21
Demand side management costs	23	21
Prepayments	31	27
Other	65	45
Total deferred tax liabilities	2,305	2,351
Net deferred tax liability	$ 1,907	$ 1,931

During the third quarter of 2013, the State of North Carolina passed legislation that lowered the state corporate income tax rate from 6.9% to 6.0% in 2014, 5.0% in 2015 and 4.0% in 2016. In connection with this change in tax rates, related state deferred tax amounts were remeasured, with the change in their balances being credited to a regulatory liability. The change in income tax rates did not and is not expected to have a material impact on the Company’s financial position, results of operations or cash flows.

The Company files consolidated federal income tax returns, and the Company and its subsidiaries file various applicable state and local income tax returns. The IRS has completed examinations of the Company’s federal returns through 2004, and the Company’s federal returns through 2007 are closed for additional assessment. The IRS is currently examining

SCANA's open federal returns through 2014 as a result of claims discussed below in Changes to Unrecognized Tax Benefits. With few exceptions, the Company is no longer subject to state and local income tax examinations by tax authorities for years before 2010.

Changes to Unrecognized Tax Benefits

Millions of dollars	2015	2014	2013
Unrecognized tax benefits, January 1	$ 16	$ 3	—
Gross increases—uncertain tax positions in prior period	33	—	—
Gross decreases—uncertain tax positions in prior period	(2)	—	—
Gross increases—current period uncertain tax positions	2	13	$ 3
Unrecognized tax benefits, December 31	$ 49	$ 16	$ 3

During 2013 and 2014, the Company amended certain of its tax returns to claim certain tax-defined research and development deductions and credits and its related impact on domestic production activities. The Company also made similar claims in filing its 2013 and 2014 returns in 2014 and 2015, respectively. In connection with these federal and state filings, the Company recorded an unrecognized tax benefit of $49 million. During 2015, as the IRS' examination of these claims progressed, without resolution, the Company evaluated and recorded adjustments to its unrecognized tax benefits; however, none of these changes materially affected the Company's effective tax rate. If recognized, $17 million of the tax benefits would affect the Company's effective tax rate. It is reasonably possible that these tax benefits will increase by an additional $7 million within the next 12 months. It is also reasonably possible that these tax benefits may decrease by $8 million within the next 12 months. No other material changes in the status of the Company’s tax positions have occurred through December 31, 2015.

The Company recognizes interest accrued related to unrecognized tax benefits within interest expense or interest income and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit, the Company has not recorded a material amount of interest income, interest expense, or penalties associated with any uncertain tax position.

6. DERIVATIVE FINANCIAL INSTRUMENTS

The Company recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. The Company recognizes changes in the fair value of derivative instruments either in earnings, as a component of other comprehensive income (loss) or, for regulated subsidiaries, within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by the Company. SCANA’s Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries. The Risk Management Committee, which is comprised of certain officers, including the Company’s Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to their attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Commodity Derivatives

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. Instruments designated as cash flow hedges are used to hedge risks associated with fixed price obligations in a volatile market and risks associated with price differentials at different delivery locations. Instruments designated as fair value hedges are used to mitigate exposure to fluctuating market prices created by fixed prices of stored natural gas. The basic types of financial instruments utilized are exchange-traded instruments, such as NYMEX futures contracts or options, and over-the-counter instruments such as options and swaps, which are typically offered by energy companies and financial institutions. Cash settlements of commodity derivatives are classified as operating activities in the consolidated statement of cash flows.

PSNC Energy hedges natural gas purchasing activities using over-the-counter options and swaps and NYMEX futures and options. PSNC Energy’s tariffs also include a provision for the recovery of actual gas costs incurred, including any costs of hedging. PSNC Energy records premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program in deferred accounts as a regulatory asset or liability for the over- or under-recovery of gas costs. These derivative financial instruments are not designated as hedges for accounting purposes.

Unrealized gains and losses on qualifying cash flow hedges of nonregulated operations are deferred in AOCI. When the hedged transactions affect earnings, previously recorded gains and losses are reclassified from AOCI to cost of gas. The effects of gains or losses resulting from these hedging activities are either offset by the recording of the related hedged transactions or are included in gas sales pricing decisions made by the business unit.

As an accommodation to certain customers, SEMI, as part of its energy management services, offers fixed price supply contracts which are accounted for as derivatives. These sales contracts are offset by the purchase of supply futures and swaps which are also accounted for as derivatives. Neither the sales contracts nor the related supply futures and swaps are designated as hedges for accounting purposes.

Interest Rate Swaps

The Company may use interest rate swaps to manage interest rate risk and exposure to changes in fair value attributable to changes in interest rates on certain debt issuances. In cases in which the Company synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges, periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, the Company may use treasury rate lock or forward starting swap agreements that are designated as cash flow hedges. Except as described in the following paragraph, the effective portions of changes in fair value and payments made or received upon termination of such agreements for regulated subsidiaries are recorded in regulatory assets or regulatory liabilities. For the holding company or nonregulated subsidiaries, such amounts are recorded in AOCI. Such amounts are amortized to interest expense over the term of the underlying debt. Ineffective portions of fair value changes are recognized in income.

Pursuant to regulatory orders, interest derivatives entered into by SCE&G after October 2013 are not designated as cash flow hedges and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Settlement losses on swaps will be amortized over the lives of subsequent debt issuances and gains may be applied to under-collected fuel, may be amortized to interest expense or may be applied as otherwise directed by the SCPSC. As discussed in Note 2, in 2013 the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income in 2013, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013. As also discussed in Note 2, pursuant to regulatory orders in 2014, the SCPSC directed SCE&G to apply $46 million of these deferred gains to reduce under-collected fuel to utilize approximately $17.8 million of these gains to offset a portion of the net lost revenues component of SCE&G's DSM Program rider, and to apply $5.0 million of the gains to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

The Company was party to natural gas derivative contracts outstanding in the following quantities:

	Commodity and Other Energy Management Contracts (in MMBTU)			
Hedge designation	**Gas Distribution**	**Retail Gas Marketing**	**Energy Marketing**	**Total**
As of December 31, 2015				
Commodity	7,530,000	7,869,000	3,973,500	19,372,500
Energy Management (a)	—	—	38,857,480	38,857,480
Total (a)	7,530,000	7,869,000	42,830,980	58,229,980
As of December 31, 2014				
Commodity	6,840,000	7,951,000	3,446,720	18,237,720
Energy Management (b)	—	—	37,495,339	37,495,339
Total (b)	6,840,000	7,951,000	40,942,059	55,733,059

(a) Includes an aggregate 1,842,048 MMBTU related to basis swap contracts in Energy Marketing.
(b) Includes an aggregate 933,893 MMBTU related to basis swap contracts in Energy Marketing.

The Company was party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $120.0 million at December 31, 2015 and $124.4 million at December 31, 2014. The Company was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.235 billion and $1.085 billion at December 31, 2015 and 2014, respectively.

The fair value of derivatives in the consolidated balance sheets is as follows:

Fair Values of Derivative Instruments

Millions of dollars	Balance Sheet Location	Asset	Liability
As of December 31, 2015			
Designated as hedging instruments

Derivatives Designated as Fair Value Hedges

The Company had no interest rate or commodity derivatives designated as fair value hedges for any period presented.

Derivatives in Cash Flow Hedging Relationships

The effect of derivative instruments on the consolidated statements of income is as follows:

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts (Effective Portion)	Loss Reclassified from Deferred Accounts into Income (Effective Portion) Location	Amount
Year Ended December 31, 2015			
Interest rate contracts	$ (3)	Interest expense	$ (3)
Year Ended December 31, 2014			
Interest rate contracts	$ (9)	Interest expense	$ (3)
Year Ended December 31, 2013			
Interest rate contracts	$ 106	Interest expense	$ (3)

Millions of dollars	Gain or (Loss) Recognized in OCI, net of tax (Effective Portion)	Gain (Loss) Reclassified from AOCI into Income, net of tax (Effective Portion) Location	Amount
Year Ended December 31, 2015			
Interest rate contracts	$ (2)	Interest expense	$ (7)
Commodity contracts	(10)	Gas purchased for resale	(15)
Total	$ (12)		$ (22)
Year Ended December 31, 2014			
Interest rate contracts	$ (6)	Interest expense	$ (7)
Commodity contracts	(8)	Gas purchased for resale	4
Total	$ (14)		$ (3)
Year Ended December 31, 2013			
Interest rate contracts	$ 5	Interest expense	$ (8)
Commodity contracts	2	Gas purchased for resale	(3)
Total	$ 7		$ (11)

As of December 31, 2015, the Company expects that during the next 12 months reclassifications from accumulated other comprehensive loss to earnings arising from cash flow hedges will include approximately $3.3 million as an increase to gas cost and approximately $7.1 million as an increase to interest expense, assuming natural gas and financial markets remain at their current levels. As of December 31, 2015, all of the Company's commodity cash flow hedges settle by their terms before the end of the second quarter of 2018.

As of December 31, 2015, the Company expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from cash flow hedges designated as hedging instruments will include approximately $2.2 million as an increase to interest expense assuming financial markets remain at their current levels.

Hedge Ineffectiveness

Other gain (losses) recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant for all periods presented.

Derivatives Not Designated as Hedging Instruments

Millions of dollars	Gain (Loss) Deferred in Regulatory Accounts	Gain Reclassified from Deferred Accounts into Income Location	Amount
Year Ended December 31, 2015			
Interest rate contracts	$ (69)	Other income	$ 5
Year Ended December 31, 2014			
Interest rate contracts	$ (352)	Other income	$ 64
Year Ended December 31, 2013			
Interest rate contracts	$ 39	Other income	$ 50

Gains reclassified to other income offset revenue reductions as previously described herein and in Note 2.

As of December 31, 2015, the Company expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from interest rate swaps not designated as cash flow hedges will include approximately $0.6 million as an increase to interest expense.

Credit Risk Considerations

The Company limits credit risk in its commodity and interest rate derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, the Company uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. The Company uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with the Company's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of the Company’s derivative instruments contain contingent provisions that require the Company to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2015 and 2014, the Company had posted $50.4 million and $152.4 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months is recorded in Other Current Assets on the consolidated balance sheets. Collateral related to the noncurrent positions is recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2015 and 2014, the Company would have been required to post an additional $44.8 million and $129.8 million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2015 and 2014, are $95.2 million and $282.2 million, respectively.

In addition, as of December 31, 2015 and December 31, 2014, the Company has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2015 and December 31, 2014, the Company could request $7.3 million and $- million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2015 and December 31, 2014 is $7.3 million and $- million, respectively. In addition, at December 31, 2015, the Company could have called on letters of credit in the amount of $3.0 million related to $14.0 million in commodity derivatives that are in a net asset position, compared to letters of credit of $9.2 million related to derivatives of $20 million at December 31, 2014, if all the contingent features underlying these instruments had been fully triggered.

Information related to the Company's offsetting derivative assets and liabilities follows:

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

The Company values available for sale securities using quoted prices from a national stock exchange, such as the NASDAQ, where the securities are actively traded. For commodity derivative and energy management assets and liabilities, the Company uses unadjusted NYMEX prices to determine fair value, and considers such measures of fair value to be Level 1 for exchange traded instruments and Level 2 for over-the-counter instruments. The Company's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	As of December 31, 2015		As of December 31, 2014	
Millions of dollars	**Level 1**	**Level 2**	**Level 1**	**Level 2**
Assets:				
Available for sale securities	$ 11	—	$ 13	—
Interest rate contracts	—	$ 15	—	—
Commodity contracts	1	—	1	—
Energy management contracts	—	14	—	$ 20
Liabilities:				
Interest rate contracts	—	87	—	257
Commodity contracts	1	4	1	11
Energy management contracts	4	12	5	18

There were no Level 3 fair value measurements for either period presented, and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2015 and December 31, 2014 were as follows:

	As of December 31, 2015		As of December 31, 2014	
Millions of dollars	**Carrying Amount**	**Estimated Fair Value**	**Carrying Amount**	**Estimated Fair Value**
Long-term debt	$ 5,997.6	$ 6,445.7	$ 5,663.1	$ 6,558.0

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

The Company sponsors a noncontributory defined benefit pension plan covering regular, full-time employees hired before January 1, 2014. The Company's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

The Company's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all eligible employees hired subsequently. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, the Company provides certain unfunded postretirement health care and life insurance benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost, while employees hired subsequently are responsible for the full cost of retiree medical benefits elected by them. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

	Pension Benefits		Other Postretirement Benefits	
Millions of dollars	**2015**	**2014**	**2015**	**2014**
Benefit obligation, January 1	$ 919.5	$ 823.0	$ 268.2	$ 238.0
Service cost	24.1	20.0	5.3	4.6
Interest cost	38.2	40.4	11.4	12.0
Plan participants' contributions	—	—	2.4	2.2
Actuarial (gain) loss	(62.4)	100.1	(21.2)	23.5
Benefits paid	(64.0)	(64.0)	(12.5)	(12.1)
Benefit obligation, December 31	$ 855.4	$ 919.5	$ 253.6	$ 268.2

The Company adopted new mortality tables and an improvement scale published by the Society of Actuaries in 2014, resulting in an actuarial loss for pension and other post retirement benefit obligations of approximately $26.3 million and $2.7 million, respectively, in 2014. In 2015, based on an evaluation of the mortality experience of the pension plan, the Company adopted a custom mortality table for purposes of measuring pension and other postretirement benefit obligations at year-end. This change resulted in an actuarial gain for pension and other postretirement benefit obligations of approximately $21.5 million and $2.4 million, respectively, in 2015.

The accumulated benefit obligation for pension benefits was $829.3 million at the end of 2015 and $888.3 million at the end of 2014. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

	Pension Benefits		Other Postretirement Benefits	
	2015	**2014**	**2015**	**2014**
Annual discount rate used to determine benefit obligation	4.68%	4.20%	4.78%	4.30%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.00%	3.00%	3.00%

A 7.0% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2015. The rate was assumed to decrease gradually to 5.0% for 2021 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation by $0.8 million at December 31, 2015 and by $1.3 million at December 31, 2014. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation by $0.7 million at December 31, 2015 and by $1.0 million at December 31, 2014.

Funded Status

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	**2015**	**2014**	**2015**	**2014**
Fair value of plan assets	$ 781.7	$ 861.8	—	—
Benefit obligation	855.4	919.5	$ 253.6	$ 268.2
Funded status	$ (73.7)	$ (57.7)	$ (253.6)	$ (268.2)

Amounts recognized on the consolidated balance sheets were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2015	2014	2015	2014
Current liability	—	—	$ (11.9)	$ (11.2)
Noncurrent liability	$ (73.7)	$ (57.7)	(241.7)	(257.0)

Amounts recognized in accumulated other comprehensive loss were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2015	2014	2015	2014
Net actuarial loss	$ 10.4	$ 8.1	$ 1.7	$ 3.0
Prior service cost	0.2	0.3	—	0.1
Total	$ 10.6	$ 8.4	$ 1.7	$ 3.1

Amounts recognized in regulatory assets were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2015	2014	2015	2014
Net actuarial loss	$ 219.4	$ 222.1	$ 24.0	$ 43.8
Prior service cost	5.9	9.6	0.3	0.6
Total	$ 225.3	$ 231.7	$ 24.3	$ 44.4

In connection with the joint ownership of Summer Station, as of December 31, 2015 and 2014, the Company recorded within deferred debits $20.3 million and $17.8 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2015 and 2014, the Company also recorded within deferred debits $13.8 million and $15.1 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2015	2014
Fair value of plan assets, January 1	$ 861.8	$ 870.0
Actual return (loss) on plan assets	(16.1)	55.8
Benefits paid	(64.0)	(64.0)
Fair value of plan assets, December 31	$ 781.7	$ 861.8

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. During 2013, in connection with the amendments to the plan, the Company adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The Company's pension plan asset allocation at December 31, 2015 and 2014 and the target allocation for 2016 are as follows:

	Percentage of Plan Assets		
	Target Allocation	December 31,	
Asset Category	2016	2015	2014
Equity Securities	58%	57%	57%
Fixed Income	33%	32%	34%
Hedge Funds	9%	11%	9%

For 2016, the expected long-term rate of return on assets will be 7.50%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes the target allocation is achieved. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment strategy described previously.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2015 and 2014, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	Fair Value Measurements at Reporting Date Using					
Millions of dollars	Total	Level 2	Level 3	Total	Level 2	Level 3
	December 31, 2015			*December 31, 2014*		
Mutual funds	$ 538	$ 538	—	$ 622	$ 622	—
Short-term investment vehicles	14	14	—	20	20	—
US Treasury securities	22	22	—	6	6	—
Corporate debt securities	78	78	—	86	86	—
Municipals	14	14	—	15	15	—
Limited partnerships	33	33	—	32	32	—
Multi-strategy hedge funds	83	—	$ 83	81	—	$ 81
	$ 782	$ 699	$ 83	$ 862	$ 781	$ 81

At December 31, 2015, assets with fair value measurements classified as Level 1 were insignificant. There were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during 2015 or 2014.

The pension plan values certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

Millions of dollars	Fair Value Measurements Level 3 2015	2014
Beginning Balance	$ 81	$ 76
Unrealized gains included in changes in net assets	2	5
Purchases, issuances, and settlements	—	—
Ending Balance	$ 83	$ 81

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from the Company's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	Pension Benefits	Other Postretirement Benefits
2016	$ 65.1	$ 11.9
2017	63.2	12.7
2018	64.7	13.5
2019	65.3	14.2
2020	65.8	14.9
2021-2025	338.3	80.5

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, the Company does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

The Company records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2015	2014	2013	2015	2014	2013
Service cost	$ 24.1	$ 20.0	$ 21.8	$ 5.3	$ 4.6	$ 5.9
Interest cost	38.2	40.4	38.5	11.4	12.0	11.1
Expected return on assets	(62.0)	(66.7)	(61.4)	n/a	n/a	n/a
Prior service cost amortization	4.1	4.1	6.0	0.4	0.3	0.7
Amortization of actuarial losses	13.6	4.8	16.9	2.1	—	3.3
Transition obligation amortization	—	—	—	—	—	0.3
Curtailment	—	—	9.9	—	—	—
Net periodic benefit cost	$ 18.0	$ 2.6	$ 31.7	$ 19.2	$ 16.9	$ 21.3

In connection with regulatory orders, SCE&G recovers current pension expense through a rate rider that may be adjusted annually (for retail electric operations) or through cost of service rates (for gas operations). For retail electric operations, current pension expense is recognized based on amounts collected through its rate rider, and differences between actual pension expense and amounts recognized pursuant to the rider are deferred as a regulatory asset (for under-collections) or regulatory liability (for over-collections) as applicable. In addition, SCE&G amortizes certain previously deferred pension costs. See Note 2.

Other changes in plan assets and benefit obligations recognized in OCI (net of tax) were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	**2015**	**2014**	**2013**	**2015**	**2014**	**2013**

Total recognized in regulatory assets	$ (6.4)	$ 94.1	$ (186.3)	$ (20.1)	$ 19.1	$ (33.4)

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
	2015	**2014**	**2013**	**2015**	**2014**	**2013**
Discount rate	4.20%	5.03%	4.10%/5.07%	4.30%	5.19%	4.19%
Expected return on plan assets	7.50%	8.00%	8.00%	n/a	n/a	n/a
Rate of compensation increase	3.00%	3.00%	3.75%/3.00%	3.00%	3.75%	3.75%
Health care cost trend rate	n/a	n/a	n/a	7.00%	7.40%	7.80%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2020

Net periodic benefit cost for the period through September 1, 2013 was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The estimated amounts to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2016 are as follows:

Millions of Dollars	**Pension Benefits**	**Other Postretirement Benefits**
Actuarial loss	$ 0.6	—
Prior service cost	0.2	—
Total	$ 0.8	—

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2016 are as follows:

Millions of Dollars	**Pension Benefits**	**Other Postretirement Benefits**
Actuarial loss	$ 12.7	$ 0.3
Prior service cost	3.4	0.3
Total	$ 16.1	$ 0.6

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

401(k) Retirement Savings Plan

The Company sponsors a defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. The Company provides 100% matching contributions up to 6% of an employee's eligible earnings. Total matching contributions made to the plan were $26.2 million in 2015, $25.8 million in 2014 and $23.4 million in 2013 and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

The LTECP provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA's common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

The 2013-2015 and 2014-2016 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three-year performance cycle. The 2015-2017 award is based on performance over a single three-year cycle. In each performance cycle of the 2013-2015 and 2014-2016 awards, 20% of the performance awards were granted in the form of restricted share units, which are liability awards payable in cash and 80% of the awards were granted in performance shares, each of which has a value that is equal to, and changes with, the value of a share of SCANA common stock. For the 2015-2017 awards, 30% are in the form of restricted share units and 70% are in the form of performance shares. Dividend equivalents are accrued on the performance shares and the restricted share units. Performance awards and related dividend equivalents are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to certain exceptions. Payouts of performance share awards are determined by SCANA's performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in GAAP-adjusted net earnings per share (weighted 50%).

Compensation cost of liability awards is recognized over their respective three-year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2013-2015 performance cycle were paid in cash totaling $18.4 million at SCANA's discretion in February 2016. Cash-settled liabilities related to earlier performance cycles totaled approximately $20.8 million in 2015, $11.8 million in 2014, and $12.2 million in 2013.

Fair value adjustments for all performance cycles resulted in compensation expense recognized in the statements of income totaling approximately $18.0 million in 2015, $20.3 million in 2014 and $8.7 million in 2013. Such fair value adjustments also resulted in capitalized compensation costs of $2.3 million in 2015, $3.1 million in 2014 and $1.4 million in 2013. At December 31, 2015, SCANA had $20.4 million of unrecognized compensation cost, which is expected to be recognized over a weighted-average period of 18 months.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.4 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million of coverage for accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $43.5 million.

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Company's results of operations, cash flows and financial position.

New Nuclear Construction

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's current ownership share in the New Units is 55%. As discussed below, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G's weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2015, SCE&G's investment in the New Units, including related transmission, totaled $3.6 billion, for which the financing costs on $3.2 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In October 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule. Shield building construction remains a principal focus area for SCE&G's oversight of the project. The primary critical path for both Unit 2 and Unit 3 runs through the placement of concrete within the containment vessels, the fabrication of shield building panels, the fabrication of the air inlet and tension rings and the completion of shield building construction. For Unit 3, the critical path also runs through the setting of CA20 which is a prerequisite to concrete placement in certain areas of the nuclear island. Plans to accelerate the work needed to permit placing this concrete are underway. In addition, WEC has reached agreement on a mitigation plan to accelerate shield building panel fabrication with one of its subcontractors. Additional mitigation will be required in critical path areas to support the updated substantial completion dates described below.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The result was a revised fully integrated project schedule with timing of specific construction activities (Revised, Fully-Integrated Construction Schedule) along with related cost information.

The Revised, Fully-Integrated Construction Schedule indicated that the substantial completion of Unit 2 was expected to occur in mid-June 2019 and that the substantial completion of Unit 3 was expected to be approximately 12 months later. The Consortium continues to refine and update the Revised, Fully-Integrated Construction Schedule as designs are finalized, as construction progresses, and as additional information is received.

In September 2015, the SCPSC approved an updated BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively, each subject to an 18-month contingency period. In addition, the SCPSC approved certain updated owner's costs ($245 million) and other capital costs ($453 million), of which $539 million were associated with the schedule delays and other contested costs. In this proceeding, SCE&G's total projected capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) were estimated to be $5.2 billion and $6.8 billion, respectively. These projections included cost amounts related to the Revised, Fully-Integrated Construction Schedule for which SCE&G had not accepted responsibility and which were the subject of dispute. As such, these updated milestone schedule and projections did not reflect the resolution of negotiations. In addition, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%. This revised return on equity will be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016, until such time as the New Units are completed.

On October 27, 2015, SCE&G, Santee Cooper and the Consortium reached a settlement regarding the above mentioned disputes, and the EPC Contract was amended. The October 2015 Amendment became effective in December 2015, upon the consummation of the acquisition by WEC of the stock of Stone & Webster from CB&I. Following that acquisition, Stone & Webster continues to be a member of the Consortium as a subsidiary of WEC rather than CB&I, and WEC has engaged Fluor Corporation as a subcontracted construction manager.

Among other things, the October 2015 Amendment:

(i) resolved by settlement and release substantially all outstanding disputes between SCE&G and the Consortium, in exchange for (a) an additional cost to be paid by SCE&G and Santee Cooper of $300 million (SCE&G’s 55% portion being $165 million) and an increase in the fixed component of the contract price by that amount, and (b) a credit to SCE&G and Santee Cooper of $50 million (SCE&G’s 55% portion being approximately $27 million) to be applied to the target component of the contract price,

(ii) revised the guaranteed substantial completion dates of Units 2 and 3 to August 31, 2019 and 2020, respectively,

(iii) revised the delay-related liquidated damages computation requirements, including those related to the eligibility of the New Units to earn Internal Revenue Code Section 45J production tax credits (see also below), and capped those aggregate liquidated damages at $463 million per New Unit (SCE&G’s 55% portion being approximately $255 million per New Unit),

(iv) provides for payment to the Consortium of a completion bonus of $275 million per New Unit (SCE&G’s 55% portion being approximately $151 million per New Unit) for each New Unit placed in service by the deadline to qualify for production tax credits,

(v) provides for development of a revised construction milestone payment schedule, with SCE&G and Santee Cooper making monthly payments of $100 million (SCE&G’s 55% portion being $55 million) for each of the first five months following effectiveness, followed by payments made based on milestones achieved, and

(vi) provided that SCE&G and Santee Cooper waive and cancel the CB&I parent company guaranty with respect to the project.

Under the October 2015 Amendment, SCE&G’s total estimated project costs increased by approximately $286 million over the $6.8 billion approved by the SCPSC in September 2015, bringing its total estimated gross construction cost of the project (including escalation and AFC) to approximately $7.1 billion.

The payment obligations under the EPC Contract are joint and several obligations of WEC and Stone & Webster, and in connection with the October 2015 Amendment, Toshiba Corporation, WEC’s parent company, reaffirmed its guaranty of WEC’s payment obligations. Based on Toshiba's current credit ratings and pursuant to the terms of the EPC Contract, SCE&G has exercised its rights to demand a payment and performance bond from WEC. Such bond will be based on estimated billings and its aggregate nominal coverage will not exceed $100 million (or $55 million for SCE&G's 55% share). SCE&G and Santee Cooper are responsible for the cost of the bond. In addition, the EPC Contract provides that upon the request of

SCE&G, the Consortium must escrow certain intellectual property and software for SCE&G's benefit to enable completion of the New Units. SCE&G has made such a request to the Consortium.

In addition to the above, the October 2015 Amendment provided for an explicit definition of a Change in Law designed to reduce the likelihood of certain future commercial disputes, and the Consortium also acknowledged and agreed that the project scope includes providing New Units that meet the standards of the NRC approved Design Control Document Revision 19. The October 2015 Amendment also established a dispute resolution board process for certain commercial claims and disputes, including any dispute that might arise with respect to the development of the revised construction milestone payment schedule referred to above. The EPC Contract was also revised to eliminate the requirement or ability to bring suit before substantial completion of the project.

Finally, the October 2015 Amendment provides SCE&G and Santee Cooper an irrevocable option, until November 1, 2016 and subject to regulatory approvals, to further amend the EPC Contract to fix the total amount to be paid to the Consortium for its entire scope of work on the project (excluding a limited amount of work within the time and materials component of the contract price) after June 30, 2015 at $6.082 billion (SCE&G’s 55% portion being approximately $3.345 billion). This total amount to be paid would be subject to adjustment for amounts paid since June 30, 2015. Were this fixed price option to be exercised, the aggregate delay-related liquidated damages referred to in (iii) above would be capped at $338 million per unit (SCE&G’s 55% portion being approximately $186 million per unit), and the completion bonus referred to in (iv) above would be $150 million per New Unit (SCE&G’s 55% portion being approximately $83 million per New Unit). The exercise of this fixed price option would result in SCE&G’s total estimated project costs increasing by approximately $774 million over the $6.8 billion approved by the SCPSC in September 2015, and would bring its total estimated gross construction cost (including escalation and AFC) of the project to approximately $7.6 billion.

Resolution of the disputes as described in (i) above, or in the case of the exercise of the fixed price option, would result in estimated project costs above the amounts approved by the SCPSC; however, the guaranteed substantial completion dates fall within the SCPSC approved 18-month contingency periods. SCE&G held an allowable ex parte communication briefing with the SCPSC on November 19, 2015 and, following an evaluation as to whether to exercise the fixed price option, expects to file a petition in 2016, as provided under the BLRA, for an update to the project’s estimated capital cost and milestone schedule which would incorporate the impact of the October 2015 Amendment.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes through both the informal and formal procedures and currently anticipates that any costs that arise through such dispute resolution processes (including those reflected in the October 2015 Amendment described above), as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost, including its cost of financing, of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the October 2015 Amendment, which has not been approved by the SCPSC, SCE&G’s currently projected cost would be approximately $750 million to $850 million for the additional 5% interest being acquired from Santee Cooper.

Nuclear Production Tax Credits

The IRS has notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. These nuclear production tax credits (related to SCE&G's 55% share of both New Units) could total as much as approximately $1.4 billion. Such credits would be earned over the first eight years of each New Unit's operations and would be realized by SCE&G over those years or during allowable carry-forward periods. Based on the guaranteed substantial completion dates provided above, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. When and to the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation. SCE&G prepared and submitted an overall integration plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

Environmental

The Company's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on the Company's financial condition, results of operations and cash flows. In addition, the Company often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, the Company expects to recover such expenditures and costs through existing ratemaking provisions.

From a regulatory perspective, SCANA, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

On August 3, 2015, the EPA issued a revised standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The final rule requires all new coal-fired power plants to meet a carbon emission rate of 1,400 pounds carbon dioxide per MWh and new natural gas units to meet 1,000 pounds carbon dioxide per MWh. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without partial carbon capture and sequestration capabilities. The Company is evaluating the final rule, but does not plan to construct new coal-fired units in the foreseeable future.

In addition, on August 3, 2015, the EPA issued its final rule on emission guidelines for states to follow in developing plans to address GHG emissions from existing units. The rule includes state-specific goals for reducing national carbon dioxide emissions by 32% from 2005 levels by 2030. The rule also provides for nuclear reactors under construction, such as the New Units, to count towards compliance and establishes a phased-in compliance approach beginning in 2022. The rule gives states from one to three years to issue SIPs, which will ultimately define the specific compliance methodology that will be applied to existing units in that state. It is expected that South Carolina will request a two-year extension (until September 2018). On February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. The order of the Supreme Court has no immediate impact on SCE&G and GENCO or their generation operations. The Company is currently evaluating the rule and expects any costs incurred to comply with such rule to be recoverable through rates.

In July 2011, the EPA issued the CSAPR to reduce emissions of sulfur dioxide and nitrogen oxide from power plants in the eastern half of the United States. A series of court actions stayed this rule until October 23, 2014, when the Court of Appeals granted a motion to lift the stay. On December 3, 2014, the EPA published an interim final rule that aligns the dates in the CSAPR text with the revised court-ordered schedule, which delayed the implementation dates to 2015 for Phase 1 and to 2017 for Phase 2. The CSAPR replaces the CAIR and requires a total of 28 states to reduce annual sulfur dioxide emissions and annual or ozone season nitrogen oxide emissions to assist in attaining the ozone and fine particle NAAQS. The rule establishes an emissions cap for sulfur dioxide and nitrogen oxide and limits the trading for emission allowances by separating affected states into two groups with no trading between the groups. On July 28, 2015, the Court of Appeals held that Phase 2 emissions budgets for certain states, including South Carolina, required reductions in emissions beyond the point necessary to achieve downwind attainment and were, therefore, invalid. The Court of Appeals remanded CSAPR, without vacating the rule, to the

EPA for further consideration. The opinion of the Court of Appeals has no immediate impact on SCE&G and GENCO or their generation operations. Air quality control installations that SCE&G and GENCO have already completed have positioned them to comply with the existing allowances set by the CSAPR. Any cost incurred to comply with CSAPR are expected to be recoverable through rates.

In April 2012, the EPA's MATS rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for generating facilities to meet the standards, and the Company's evaluation of the rule is ongoing. The Company's decision to retire certain coal-fired units (see Note 2) and its project to build the New Units along with other actions are expected to result in the Company's compliance with MATS.

On November 19, 2014, the EPA finalized its reconsideration of certain provisions applicable during startup and shutdown of generating facilities under the MATS rule. SCE&G and GENCO have received a one year extension (until April 2016) to comply with MATS at Cope, McMeekin, Wateree and Williams Stations. These extensions will allow time to convert McMeekin Station to burn natural gas and to install additional pollution control devices at the other plants that will enhance the control of certain MATS-regulated pollutants. On June 29, 2015, the U.S. Supreme Court ruled that the EPA unreasonably failed to consider costs in its decision to regulate, and remanded a case challenging the regulation on that basis to the Court of Appeals. The Court noted during remand that EPA has said that it is on track to issue a revised "appropriate and necessary" finding by April 15, 2016. The ruling, however, is not expected to have an impact on SCE&G or GENCO due to the aforementioned retirements and conversions. SCE&G and GENCO currently are in compliance with the MATS rule and expect to remain in compliance.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility's NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule became effective on January 4, 2016. After this date, state regulators will modify facility NPDES permits to match more restrictive standards, thus requiring facilities to retrofit with new wastewater treatment technologies. Compliance dates will vary by type of wastewater, and some will be based on a facility's five year permit cycle and thus may range from 2018 to 2023. The Company expects that wastewater treatment technology retrofits will be required at Williams and Wateree Stations and may be required at other facilities. Any costs incurred to comply with the ELG Rule are expected to be recoverable through rates.

The CWA Section 316(b) Existing Facilities Rule became effective in October 2014. This rule establishes national requirements for the location, design, construction and capacity of cooling water intake structures at existing facilities that reflect the best technology available for minimizing the adverse environmental impacts of impingement and entrainment. SCE&G and GENCO are conducting studies and implementing plans to ensure compliance with this rule. In addition, Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones.

On April 17, 2015, the EPA's final rule for CCR was published in the Federal Register and became effective in the fourth quarter of 2015. This rule regulates CCR as a non-hazardous waste under Subtitle D of the Resource Conservation and Recovery Act and imposes certain requirements on ash storage ponds and other CCR management facilities at SCE&G's and GENCO's coal-fired generating facilities. Although the full effects of this rule are still being evaluated, SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds and have previously recognized AROs for such ash storage ponds under existing requirements. The Company does not expect the incremental compliance costs associated with this rule to be significant and expects to recover such costs in future rates.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998, and it imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2015, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017 and has constructed a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. The states of South Carolina and North Carolina have similar laws. The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify the Company that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue at least through 2017 and will cost an additional $18.5 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2015, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $34.8 million and are included in regulatory assets.

Claims and Litigation

The Company is subject to various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on the Company's results of operations, cash flows or financial condition.

Operating Lease Commitments

The Company is obligated under various operating leases for rail cars, vehicles, office space, furniture and equipment. Leases expire at various dates through 2051. Rent expense totaled approximately $11.1 million in 2015, $12.3 million in 2014 and $14.8 million in 2013. Future minimum rental payments under such leases will be $10 million in 2016, $7 million in 2017, $6 million in 2018, $6 million in 2019, $3 million in 2020 and $27 million thereafter.

Guarantees

SCANA issues guarantees on behalf of its consolidated subsidiaries to facilitate commercial transactions with third parties. These guarantees are in the form of performance guarantees, primarily for the purchase and transportation of natural gas, standby letters of credit issued by financial institutions and credit support for certain tax-exempt bond issues. SCANA is not required to recognize a liability for such guarantees unless it becomes probable that performance under the guarantees will be required. SCANA believes the likelihood that it would be required to perform or otherwise incur any losses associated with these guarantees is remote; therefore, no liability for these guarantees has been recognized. To the extent that a liability subject to a guarantee has been incurred, the liability is included in the consolidated financial statements. At December 31, 2015, the maximum future payments (undiscounted) that SCANA could be required to make under guarantees totaled approximately $1.8 billion.

Asset Retirement Obligations

The Company recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that results from their acquisition, construction, development and normal operation relate primarily to the Company's regulated utility operations. As of December 31, 2015, the Company has recorded AROs of approximately $176 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $344 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of AROs is as follows:

Millions of dollars	2015	2014
Beginning balance	$ 563	$ 576
Liabilities incurred	—	3
Liabilities settled	(16)	(6)
Accretion expense	25	26
Revisions in estimated cash flows	(52)	(36)
Ending balance	$ 520	$ 563

In 2015, revisions in estimated cash flows primarily relate to changes in the expected timing of ARO settlements due to changes in the estimated useful lives of certain electric utility properties identified as part of a customary depreciation study. In 2014 such revisions primarily relate to lower estimates for certain environmental clean up obligations at generation facilities.

11. AFFILIATED TRANSACTIONS

The Company received cash distributions from equity-method investees of $4.0 million in 2015, $7.8 million in 2014 and $10.4 million in 2013. The Company made investments in equity-method investees of $4.1 million in 2015, $5.7 million in 2014 and $5.2 million in 2013.

SCE&G owns 40% of Canadys Refined Coal, LLC, which is involved in the manufacturing and sale of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G’s total purchases from this affiliate were $233.2 million in 2015, $260.3 million in 2014 and $134.2 million in 2013. SCE&G’s total sales to this affiliate were $232.0 million in 2015, $259.0 million in 2014 and $133.6 million in 2013. SCE&G’s payable to this affiliate was $12.9 million at December 31, 2015 and $27.9 million at December 31, 2014 SCE&G’s receivable from this affiliate was $12.8 million at December 31, 2015 and $27.8 million at December 31, 2014.

12. SEGMENT OF BUSINESS INFORMATION

Reportable segments, which are described below, follow the same accounting policies as those described in Note 1 and reflect the effect of certain reclassifications described therein. The Company records intersegment sales and transfers of electricity and gas based on rates established by the appropriate regulatory authority. Nonregulated sales and transfers are recorded at current market prices.

Electric Operations primarily generates, transmits and distributes electricity, and is regulated by the SCPSC and FERC.

Gas Distribution, comprised of the local distribution operations of SCE&G and PSNC Energy, purchases and sells natural gas, primarily at retail. SCE&G and PSNC Energy are regulated by the SCPSC and the NCUC, respectively.

Retail Gas Marketing markets natural gas in Georgia and is regulated as a marketer by the GPSC. Energy Marketing markets natural gas to industrial and large commercial customers and municipalities in the Southeast.

All Other is comprised of the holding company and its other direct and indirect wholly-owned subsidiaries, which conduct nonregulated, energy-related operations. All Other also includes two additional subsidiaries prior to their sale in the first quarter of 2015 (see Note 13) and, in 2015, also includes within net income the holding company's gains on the sales of those businesses. None of these subsidiaries met the quantitative thresholds for determining reportable segments during any period reported.

Regulated reportable segments share a similar regulatory environment and, in some cases, overlapping service areas. However, Electric Operations’ product differs from the other segments, as does its generation process and method of distribution. Marketing segments differ from each other in their respective markets and customer type.

Management uses operating income to measure segment profitability for SCE&G and other regulated operations and evaluates utility plant, net, for segments attributable to SCE&G. As a result, the Company does not allocate interest charges, income tax expense or assets other than utility plant to its segments. For nonregulated operations, management uses net income as the measure of segment profitability and evaluates total assets for financial position. Interest income is not reported by segment and is not material. The Company's deferred tax assets are netted with deferred tax liabilities for consolidated reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the energy-related and regulated segments. Revenues from non-reportable and nonregulated segments are included in Other Income. Therefore the adjustments to total operating revenues remove revenues from non-reportable segments. Adjustments to net income consist of the unallocated net income of the Company's regulated reportable segments.

Segment Assets include utility plant, net for SCE&G's Electric Operations and Gas Distribution, and all assets for PSNC Energy and the remaining segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for SCE&G.

Adjustments to Interest Expense, Income Tax Expense, Expenditures for Assets and Deferred Tax Assets include primarily the totals from SCANA or SCE&G that are not allocated to the segments. Interest Expense is also adjusted to eliminate charges between affiliates. Adjustments to Depreciation and Amortization consist of non-reportable segment expenses, which are not included in the depreciation and amortization reported on a consolidated basis. Expenditures for Assets are adjusted for AFC and revisions to estimated cash flows related to AROs. Deferred Tax Assets are adjusted to net them against deferred tax liabilities on a consolidated basis.

Disclosure of Reportable Segments (Millions of dollars)

	Electric Operations	Gas Distribution	Retail Gas Marketing	Energy Marketing	All Other	Adjustments/ Eliminations	Consolidated Total
2015							
External Revenue	$ 2,551	$ 810	$ 449	$ 569	$ 5	$ (4)	$ 4,380

13. DISPOSITIONS

In December 2014, SCANA entered into definitive agreements to sell CGT and SCI. CGT was an interstate natural gas pipeline regulated by FERC that transported natural gas in South Carolina and southeastern Georgia, and it was sold to Dominion Resources, Inc. SCI provided fiber optic communications and other services and built, managed and leased communications towers in several southeastern states, and it was sold to Spirit Communications. These sales closed in the first quarter of 2015. Proceeds from these sales, net of transaction costs, were approximately $647 million, and the pre-tax gain on the sales recognized during 2015 was approximately $341 million.

CGT and SCI operated principally in wholesale markets, whereas the Company's primary focus is the delivery of energy-related products and services to retail markets. In addition, neither CGT nor SCI met accounting criteria for disclosure as a reportable segment. Accordingly, segment disclosures related to them are included within All Other in Note 12. As a result, the Company determined that the sales of CGT and SCI did not represent a strategic shift that had a major effect on its operations, and therefore, these sales did not meet the criteria for classification as discontinued operations.

The carrying values of the major classes of assets and liabilities classified as held for sale in the consolidated balance sheet as of December 31, 2014, were as follows:

Millions of dollars	CGT	SCI	Total
Assets Held for Sale			
Utility Plant, Net	$ 288.4	—	$ 288.4
Nonutility Property and Investments, Net	0.6	$ 40.1	40.7
Current Assets	6.5	3.9	10.4
Deferred Debits and Other Assets	0.9	0.2	1.1
Total Assets Held for Sale	$ 296.4	$ 44.2	$ 340.6
Liabilities Held for Sale			
Current Liabilities	$ 3.5	$ 2.2	$ 5.7
Deferred Credits and Other Liabilities	42.9	3.1	46.0
Total Liabilities Held for Sale	$ 46.4	$ 5.3	$ 51.7

14. QUARTERLY FINANCIAL DATA (UNAUDITED)

Millions of dollars, except per share amounts	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Annual
2015					
Total operating revenues	$ 1,389	$ 967	$ 1,068	$ 956	$ 4,380
Operating income	586	216	292	214	1,308
Net income	400	99	149	98	746
Earnings per share	2.80	.69	1.04	.69	5.22
2014					
Total operating revenues	$ 1,590	$ 1,026	$ 1,121	$ 1,214	$ 4,951
Operating income	350	154	269	234	1,007
Net income	193	96	144	105	538
Earnings per share	1.37	.68	1.01	.73	3.79

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCE&G is a regulated public utility engaged in the generation, transmission, distribution and sale of electricity and in the purchase and sale, primarily at retail, and transportation of natural gas. SCE&G's business is subject to seasonal fluctuations. Generally, sales of electricity are higher during the summer and winter months because of air-conditioning and heating requirements, and sales of natural gas are greater in the winter months due to heating requirements. SCE&G's electric service territory extends into 24 counties covering nearly 17,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 36 counties in South Carolina and covers approximately 23,000 square miles.

Key Earnings Drivers and Outlook

During 2015, economic growth continued to improve in the southeast. In SCE&G's service territory, companies announced plans during the year to invest over $1.6 billion, with the expectation of creating approximately 4,000 jobs. South Carolina's unemployment rate ended December 2015 at 5.5%, a drop of 1% over 2014, an improvement that takes on greater significance when considering that almost 80,000 more South Carolinians were employed at the end of 2015 over 2014. In addition, SCE&G's regulated businesses experienced positive customer growth year over year.

Over the next five years, key earnings drivers for SCE&G will be additions to utility rate base, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

SCE&G's electric operations primarily generates electricity and provides for its transmission, distribution and sale to approximately 698,000 customers (as of December 31, 2015) in portions of South Carolina in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control costs. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electricity prices and, therefore, the competitive position of electricity against other energy sources.

Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2015 was 10.25% for non-BLRA rate base and 11.0% for BLRA-related rate base. To prevent the need for a non-BLRA base rate increase during years of peak nuclear construction, SCE&G has a stated goal of earning a return on equity for non-BLRA rate base of 9% or higher. For the year ended December 31, 2015, SCE&G's earned return on equity related to non-BLRA rate base was approximately 9.75%.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of two 1,250 MW (1,117 MW, net) nuclear generation units, which SCE&G will jointly own with Santee Cooper. SCE&G's current ownership share in the New Units is 55%, and SCE&G has agreed to acquire an additional 5% ownership from Santee Cooper in increments beginning with the commercial operation date of Unit 2. The purchase of this additional 5% ownership is expected to be funded by increased cash flows resulting from tax deductibility of depreciation associated with the New Units when they enter commercial operation.

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. As of December 31, 2015, SCE&G's investment in the New Units totaled $3.6 billion, for which the financing costs on $3.2 billion have been reflected in rates under the BLRA.

In September 2015, the SCPSC approved an updated BLRA milestone schedule and certain updated owner's costs and other capital costs, some of which were associated with schedule delays and other contested costs. Also in September 2015, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%, to be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016.

On October 27, 2015, SCE&G, Santee Cooper and the Consortium reached a settlement regarding certain disputes, and the EPC Contract was amended. The October 2015 Amendment became effective on December 31, 2015, and among other things, it resolved by settlement and release substantially all outstanding disputes between SCE&G and the Consortium. The October 2015 Amendment also provides SCE&G and Santee Cooper an irrevocable option, until November 1, 2016 and subject to regulatory approvals, to further amend the EPC Contract to fix the total amount to be paid to the Consortium for its entire scope of work on the project after June 30, 2015, subject to certain exceptions.

On November 19, 2015, SCE&G held an allowable *ex parte* communication briefing with the SCPSC to describe SCE&G's settlement with the Consortium. During that briefing, the Company provided the following summary of key points related to the SCPSC's September 2015 order and the October 2015 Amendment.

	SCPSC Order #2015-661 September 2015	**October 2015 Amendment**	**Fixed Price Option Under the October 2015 Amendment**
Guaranteed Substantial Completion Dates	Unit 2 - June 2019 Unit 3 - June 2020	Unit 2 - August 2019 Unit 3 - August 2020	
Capital Cost (SCE&G's 55% share)	$5.247 billion	$5.492 billion	$6.757 billion
Future Escalation to WEC*	$794 million	$813 million	$19 million
Total Expected Project Cost (SCE&G's 55% share)	$6.827 billion	$7.113 billion	$7.601 billion
Liquidated Damages	$155 million at 100%$86 million - SCE&G	$926 million at 100% $509 million - SCE&G	$676 million at 100% $372 million - SCE&G
Bonuses	Capacity Performance Related	Completion - Capacity Performance bonus removed $550 million at 100% $303 million - SCE&G	$300 million at 100% $165 million - SCE&G
Change in Law Language	Generally defined	Explicitly defined - Formal written adoption of a new statute, regulation, requirement, or code or new NRC regulatory requirement that did not exist as of this amendment	

* The fixed price option, regardless of date of acceptance, would fix project costs and shift the risk of escalation (excluding escalation primarily on owner's and transmission costs) to WEC as of June 30, 2015. Total gross escalation recorded as of June 30, 2015 is $386 million. Under the fixed price option, total gross escalation remaining on the project is estimated to be approximately $145 million.

Following an evaluation as to whether to exercise the fixed price option, SCE&G expects to file a petition, as provided under the BLRA, for an update to the project's estimated capital cost schedule which would incorporate the impact of the October 2015 Amendment. Refer to the Exhibit Index for information on where a copy of the October 2015 Amendment is available publicly.

The information summarized above, as well as additional information on these and other related matters, is further discussed at Note 2 and Note 10 to the consolidated financial statements.

Environmental

EPA regulations have a significant impact on Consolidated SCE&G's electric operations. In 2015, several regulations were proposed or became final, including the following:

- On June 29, 2015, the Supreme Court ruled that the EPA unreasonably failed to consider costs in its decision to regulate mercury and other specified air pollutants under the MATS rule, but did not vacate MATS. The EPA has indicated that it expects to issue a revised rule responsive to the issue raised by the Supreme Court by April 15, 2016. SCE&G and GENCO have received a one-year extension (until April 2016) to comply with MATS at certain of their generating stations. These extensions will allow time to convert one generating station to burn natural gas and to install additional pollution control devices at other generating stations. SCE&G and GENCO currently are in compliance with the MATS rule and expect to remain in compliance.

- A revised standard for new power plants under the CAA was proposed on August 3, 2015, and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. This rule effectively prevents construction of new coal-fired plants without partial carbon capture and sequestration capabilities.

- On August 3, 2015, the EPA issued its final rule under the Clean Power Plan that would regulate carbon dioxide emissions from existing units. This rule includes state-specific goals for reducing national carbon dioxide emissions by 32% from 2005 levels by 2030. The rule provides for nuclear reactors under construction, such as the New Units, to count towards compliance and establishes a phased-in compliance approach beginning in 2022. The rule gives states from one to three years to issue SIPs, which will ultimately define the specific compliance methodology that will be applied to existing units in that state. It is expected that South Carolina will request a two-year extension (until September 2018). On February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. The order of the Supreme Court has no immediate impact on SCE&G and GENCO or their generation operations. Any costs incurred to comply with such rule are expected to be recoverable through rates.

- The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved in connection with the renewal (every five years) of state-issued NPDES permits. The ELG Rule became effective January 4, 2016. SCE&G and GENCO expect that wastewater treatment technology retrofits will be required at two generating stations and may be required at other facilities. The extent of the station-specific retrofits required and the related schedule for compliance will be determined in connection with each plant's NPDES permit renewal.

- New federal regulations affecting the management and disposal of CCRs became effective in the fourth quarter of 2015. Under these regulations, CCRs will not be regulated as hazardous waste. These regulations do impose certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. These regulations are not expected to have a material effect on SCE&G and GENCO because SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The above environmental initiatives and similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, Consolidated SCE&G cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on Consolidated SCE&G, if any. Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The local distribution operations of SCE&G purchases, transports and sells natural gas to approximately 348,000 retail customers (as of December 31, 2015) in portions of South Carolina. Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25%.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact SCE&G’s ability to retain large commercial and industrial customers. In addition, the production of shale gas in the United States continues to keep prices for this commodity at historic lows, and such prices are expected to continue at such levels for the foreseeable future.

RESULTS OF OPERATIONS

Net Income

Net income for Consolidated SCE&G was as follows:

Millions of dollars	2015	Change	2014	Change	2013
Net income	$ 479.5	4.8%	$ 457.7	17.1%	$ 390.8

2015 vs 2014

Net income increased primarily due to higher electric margin, higher gas distribution margin and lower depreciation expense, partially offset by lower other income, higher operation and maintenance expense, higher property taxes, higher interest cost, and higher income taxes, as further described below.

2014 vs 2013

Net income increased primarily due to the effects of weather, customer growth and base rate increases under the BLRA. Higher electric and gas margins were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense, further described below.

Dividends Declared

Consolidated SCE&G's Boards of Directors declared the following dividends on common stock (all of which was held by SCANA):

Declaration Date	Dividend Amount	Quarter Ended	Payment Date
February 18, 2016	$74.2 million	March 31, 2016	April 1, 2016
February 20, 2015	$70.7 million	March 31, 2015	April 1, 2015
April 30, 2015	$69.7 million	June 30, 2015	July 1, 2015
July 30, 2015	$70.5 million	September 30, 2015	October 1, 2015
October 29, 2015	$74.5 million	December 31, 2015	January 1, 2016
February 20, 2014	$64.3 million	March 31, 2014	April 1, 2014
April 24, 2014	$64.4 million	June 30, 2014	July 1, 2014
July 31, 2014	$68.5 million	September 30, 2014	October 1, 2014
October 30, 2014	$74.4 million	December 31, 2014	January 1, 2015

When a dividend payment date falls on a weekend or holiday, the payment is made the following business day.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 2,557.1	(2.7)%	$ 2,629.4	8.2%	$ 2,430.5
Less: Fuel used in electric generation	660.6	(17.4)%	799.3	6.4%	751.0
Purchased power	52.1	(35.4)%	80.7	87.7%	43.0
Margin	1,844.4	5.4 %	1,749.4	6.9%	1,636.5
Other operation and maintenance expenses	509.6	0.4 %	507.5	3.6%	489.9
Depreciation and amortization	266.9	(7.8)%	289.5	0.4%	288.3
Other taxes	192.4	4.1 %	184.8	3.2%	179.0
Operating Income	$ 875.5	14.1 %	$ 767.6	13.0%	$ 679.3

2015 vs 2014

- Margin increased due to downward adjustments of $69.0 million in 2014, compared to downward adjustments of $19.7 million in 2015, pursuant to orders of the SCPSC, related to fuel cost recovery and DSM Programs. These adjustments had no effect on net income as they were fully offset by the recognition, within other income, of gains realized upon the late 2013 settlement of certain derivative interest rate contracts, lower depreciation expense upon the adoption and implementation of revised depreciation rates as a result of an updated depreciation study and the application, as a reduction to operation and maintenance expenses, of a portion of the storm damage reserve. Margin also increased due to base rate increases under the BLRA of $65.7 million and residential and commercial customer growth of $21.4 million. These increases were partially offset by $25.6 million due to the effects of weather, lower industrial margins of $14.6 million primarily due to variable price contracts, and lower collections under the rate rider for pension costs of $3.0 million. See Note 2 to the consolidated financial statements.
- Operations and maintenance expenses increased due to the application of $5.0 million in 2014 of the storm damage reserve to offset downward revenue adjustments related to DSM Programs and the amortization of $3.7 million of DSM Programs cost. These increases were partially offset by lower labor costs of $2.0 million primarily due to lower pension cost recognition as a result of lower rate rider collections.
- Depreciation and amortization decreased by $28.7 million in 2015 due to the implementation of the above mentioned revised depreciation rates, $14.5 million of which was offset by downward revenue adjustments. This decrease in depreciation expense was partially offset by increases associated with net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

2014 vs 2013

- Electric margin increased due to the effects of weather of $43.5 million, base rate increases under the BLRA of $54.1 million and customer growth of $14.7 million. These margin increases were partially offset by downward adjustments of $69.0 million in 2014, compared to downward adjustments of $50.1 million in 2013, pursuant to SCPSC orders related to fuel cost recovery, the reversal of undercollected amounts related to SCE&G's eWNA program (the eWNA was discontinued effective with the first billing cycle of 2014) and DSM Programs. Such adjustments are fully offset by the recognition within other income of gains realized upon the late 2013 settlement of certain derivative interest rate contracts and the application, as a reduction to operation and maintenance expenses, of a portion of the storm damage reserve, both of which had been deferred in regulatory accounts. See Note 2 to the consolidated financial statements.
- Operations and maintenance expenses increased due to nonlabor operating expenses of $8.9 million, DSM Programs cost amortization of $2.1 million, higher labor expense of $1.1 million which includes incentive compensation and lower pension cost recognition, storm expenses of $1.1 million and other general expenses of $1.9 million.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2015	Change	2014	Change	2013
Residential	7,978	(2.2)%	8,156	7.7	7,571
Commercial	7,386	0.2 %	7,371	2.3%	7,205
Industrial	6,201	(0.5)%	6,234	3.9%	6,000
Other	595	(0.8)%	600	3.3%	581
Total retail sales	22,160	(0.9)%	22,361	4.7%	21,357
Wholesale	942	(1.7)%	958	0.3%	955
Total	23,102	(0.9)%	23,319	4.5%	22,312

2015 vs 2014

Retail sales volumes decreased primarily due to the effects of weather, partially offset by customer growth.

2014 vs 2013

Retail sales volumes increased primarily due to the effects of weather and customer growth.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G. Gas distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2015	Change	2014	Change	2013
Operating revenues	$ 372.7	(19.4)%	$ 462.2	11.5%	$ 414.4
Less: Gas purchased for resale	192.5	(32.0)%	283.1	16.0%	244.1
Margin	180.2	0.6 %	179.1	5.2%	170.3
Other operation and maintenance expenses	69.8	3.1 %	67.7	1.7%	66.6
Depreciation and amortization	26.8	4.3 %	25.7	2.4%	25.1
Other taxes	24.9	7.8 %	23.1	9.0%	21.2
Operating Income	$ 58.7	(6.2)%	$ 62.6	9.1%	$ 57.4

2015 vs 2014

- Margin increased by $4.3 million due to customer growth partially offset by a decrease of $3.1 million due to a SCPSC-approved decrease in base rates under the RSA which became effective in November 2014.
- Operation and maintenance expenses increased due to higher labor costs of $1.1 million, primarily due to incentive compensation.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

2014 vs 2013

- Margin increased primarily due to residential and commercial customer growth of $4.0 million and increased average usage of $2.5 million.
- Operations and maintenance expense increased $1.3 million due to labor.
- Depreciation and amortization increased due to net plant additions.
- Other taxes increased due primarily to higher property taxes associated with net plant additions.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2015	Change	2014	Change	2013
Residential	12,086	(19.0)%	14,917	19.2 %	12,515
Commercial	12,580	(9.7)%	13,936	9.0 %	12,786
Industrial	17,901	(2.2)%	18,307	(10.3)%	20,411
Transportation gas	4,781	11.5 %	4,286	(10.7)%	4,801
Total	47,348	(8.0)%	51,446	1.8 %	50,513

2015 vs 2014

Residential and commercial firm sales volumes decreased due to the effects of weather and lower average use. These decreases were partially offset by customer growth. Commercial and industrial interruptible volumes decreased due to a shift to transportation service from system supply and the impact of curtailments. Transportation volumes increased due to customers shifting to transportation only service.

2014 vs 2013

Residential and commercial sales volumes increased primarily due to the effects of weather and customer growth. Industrial sales volumes decreased due to weather related curtailments and a customer switching to an alternative fuel source. Transportation sales volumes decreased due to weather related curtailments.

Other Operating Expenses

Other operating expenses (including transactions with affiliates) were as follows:

Millions of dollars		2015	Change		2014	Change		2013
Other operation and maintenance	$	579.4	0.7 %	$	575.2	3.4%	$	556.5
Depreciation and amortization		293.7	(6.8)%		315.2	0.6%		313.4
Other taxes		217.3	4.5 %		207.9	3.8%		200.2

Changes in other operating expenses are addressed in the electric operations and gas distribution segments.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on Consolidated SCE&G's income statements and balance sheets as follows:

Millions of dollars		2015	Change		2014	Change		2013
Income Statement Impact:								
Employee benefit costs	$	2.8	(30.0)%	$	4.0	(63.6)%	$	11.0
Other expense		0.2	100.0 %		0.1	(83.3)%		0.6
Balance Sheet Impact:								
Increase in capital expenditures		3.4	*		0.3	(95.3)%		6.4
Component of amount receivable from Summer Station co-owner		1.5	*		0.1	(96.0)%		2.5
Increase (decrease) in regulatory assets		6.2	*		(3.2)	*		5.5
Net periodic benefit cost	$	14.1	*	$	1.3	(96.0)%	$	26.0

* Greater than 100%

Pursuant to regulatory orders, SCE&G recovers current pension expense through a rate rider (for retail electric operations) and through cost of service rates (for gas operations), and amortizes pension costs previously deferred in regulatory assets as further described in Note 2 and Note 8 to the consolidated financial statements. Amounts amortized were as follows:

Millions of dollars		2015		2014		2013
Retail electric operations	$	2.0	$	2.0	$	2.0
Gas operations		1.0		1.0		0.2

Other Income (Expense)

Other income (expense) includes the results of certain incidental non-utility activities and AFC. AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. Consolidated SCE&G includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. Components of other income (expense) were as follows:

Millions of dollars		2015	Change		2014	Change		2013
Other income	$	31.1	(61.0)%	$	79.8	51.4%	$	52.7
Other expense		(31.1)	(8.0)%		(33.8)	93.1%		(17.5)
AFC - equity funds		24.8	(10.5)%		27.7	10.4%		25.1

2015 vs 2014

Other income decreased due primarily to the recognition of $64.0 million of gains in 2014, compared to $5.2 million in 2015, realized upon the settlement of certain interest rate contracts previously recorded as regulatory liabilities pursuant to the SCPSC orders previously discussed. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income (see electric margin discussion). AFC decreased due to lower AFC rates.

2014 vs 2013

Other income (expense) increased primarily due to the recognition of $64.0 million of gains realized upon the late 2013 settlement of certain interest rate derivative contracts previously recorded as regulatory liabilities pursuant to SCPSC orders previously discussed, compared to $50.1 million of such gains in 2013. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income. Donations increased $4.6 million, equity partnership losses increased $2.3 million and AFC increased $2.6 million.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars	2015	Change	2014	Change	2013
Interest on long-term debt, net	$ 236.0	8.5%	$ 217.6	5.2 %	$ 206.8
Other interest expense	12.1	16.3%	10.4	(1.0)%	10.5
Total	$ 248.1	8.8%	$ 228.0	4.9 %	$ 217.3

Interest on long-term debt increased in each year primarily due to increased long-term borrowings.

Income Taxes

Income tax expense increased each year primarily due to increases in income before taxes.

LIQUIDITY AND CAPITAL RESOURCES

Consolidated SCE&G anticipates that its contractual cash obligations will be met through internally generated funds and additional short- and long-term borrowings. Consolidated SCE&G expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt.

Consolidated SCE&G’s cash requirements arise primarily from its operational needs, funding its construction programs and payment of dividends to SCANA. The ability of Consolidated SCE&G to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental
regulations, will depend upon its ability to attract the necessary financial capital on reasonable terms. Consolidated SCE&G recovers the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and Consolidated SCE&G continues its ongoing construction program, Consolidated SCE&G expects to seek increases in rates. Consolidated SCE&G’s future financial position and results of operations will be affected by Consolidated SCE&G’s ability to obtain adequate and timely rate and other regulatory relief.

Rating agencies consider qualitative and quantitative factors when assessing Consolidated SCE&G's credit ratings, including regulatory environment, capital structure and the ability to meet liquidity requirements. Changes in the regulatory environment or deterioration of Consolidated SCE&G's commonly monitored financial credit metrics could adversely affect Consolidated SCE&G's debt ratings. This could cause Consolidated SCE&G to pay higher interest rates on its long- and short-term indebtedness, and could limit Consolidated SCE&G's access to capital markets and liquidity.

Cash outlays for property additions and construction expenditures, including nuclear fuel, were $1.0 billion in 2015. Consolidated SCE&G’s current estimates of its capital expenditures for construction and nuclear fuel for the next three years, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	2016	2017	2018
Consolidated SCE&G - Normal			
Generation	$ 88	$ 130	$ 91
Transmission & Distribution	192	163	187
Other	12	9	15
Gas	61	63	60
Common	3	2	4
Total Consolidated SCE&G - Normal	356	367	357
New Nuclear (including transmission)	1,166	1,013	677
Cash Requirements for Construction	1,522	1,380	1,034
Nuclear Fuel	122	80	89
Total Estimated Capital Expenditures	$ 1,644	$ 1,460	$ 1,123

Consolidated SCE&G's contractual cash obligations as of December 31, 2015 are summarized as follows:

Contractual Cash Obligations

	Payments due by period				
Millions of dollars	Total	Less than 1 year	1 - 3 years	4 - 5 years	More than 5 years
Long-term and short-term debt including interest	$ 10,850	$ 777	$ 1,425	$ 454	$ 8,194
Capital leases	16	4	9	1	2
Operating leases	26	4	4	1	17
Purchase obligations	3,468	1,735	1,621	112	—
Other commercial commitments	2,725	450	825	700	750
Total	$ 17,085	$ 2,970	$ 3,884	$ 1,268	$ 8,963

Included in the table above in purchase obligations is SCE&G's portion of a contractual agreement for the design and construction of the New Units at Summer Station. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent. SCE&G estimates it will cost $750 million to $850 million to acquire an additional 5% ownership in the New Units and has included $750 million for this purpose in other commercial commitments. See also New Nuclear Construction in Note 10 to the consolidated financial statements.

Purchase obligations includes customary purchase orders under which SCE&G has the option to utilize certain vendors without the obligation to do so. SCE&G may terminate such arrangements without penalty.

Other commercial commitments includes estimated obligations for coal and nuclear fuel purchases. SCE&G also has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional AROs that are not listed in the contractual cash obligations above. See Notes 1 and 10 to the consolidated financial statements.

Consolidated SCE&G is party to certain interest rate derivative contracts for which unfavorable market movements above certain thresholds are funded in cash. Certain of these interest rate derivative contracts are accounted for as cash flow hedges, and others are not designated as cash flow hedges but are accounted for pursuant to regulatory orders. See further discussion at ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK and Note 6 to the consolidated financial statements. At December 31, 2015, Consolidated SCE&G had posted $13 million in cash collateral related to interest rate derivative contracts.

In connection with the effectiveness of the October 2015 Amendment, SCE&G accrued within accounts payable $250 million (SCE&G's 55% share is $137.5 million) as of December 31, 2015 for the settlement and release of substantially all outstanding disputes between SCE&G and the Consortium. These amounts are not included in capital expenditures and contractual cash obligations above. See Note 10 to the consolidated financial statements.

Consolidated SCE&G has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional AROs that are not listed in contractual cash obligations above. See Notes 1 and 10 to the consolidated financial statements. In addition Consolidated SCE&G has recorded liabilities for certain unrecognized tax benefits that are not included in contractual cash obligations. See Note 5 to the consolidated financial statements.

Financing Limits and Related Matters

Consolidated SCE&G's issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including the SCPSC and FERC.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

In December 2015, the Consolidated SCE&G's existing five-year committed LOCs were amended and extended by one year. At December 31, 2015 SCE&G and Fuel Company were parties to five-year credit agreements in the amounts of $1.2 billion, (of which $500 million relates to Fuel Company) which expire in December 2020. In addition, at December 31, 2015 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in December 2018. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

As of December 31, 2015, Consolidated SCE&G had no outstanding borrowings under its $1.4 billion facilities, had approximately $420 million in commercial paper borrowings outstanding, was obligated under $.3 million in LOC-supported letters of credit, and had approximately $130 million in cash and temporary investments. Consolidated SCE&G regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance
on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2015 were approximately $422 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2015, Consolidated SCE&G's long-term debt portfolio has a weighted average maturity of approximately 23 years and bears an average cost of 5.8%. Substantially all of Consolidated SCE&G's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, Consolidated SCE&G rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

SCE&G's Restated Articles of Incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G's bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock, all of which is beneficially owned by SCANA.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2015, approximately $72.4 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G's common stock.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2015, the Bond Ratio was 5.17.

Financing Activities

During 2015, net cash inflows related to financing activities totaled approximately $54 million, primarily associated with the issuance of long-term debt and contributions from parent, partially offset by repayment of short- and long-term debt and payment of dividends.

In May 2015, SCE&G issued $500 million of 5.1% first mortgage bonds due June 1, 2065. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G’s construction program, to finance capital expenditures, and for general corporate purposes.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G’s construction program, to finance capital expenditures, and for general corporate purposes.

Investing Activities

To settle interest rate derivative contracts, SCE&G paid approximately $253 million, net, in 2015, approximately $95 million in 2014 and approximately $6 million, net, through the third quarter of 2013. During the fourth quarter of 2013, SCE&G received approximately $120 million upon the settlement of interest rate derivatives.

For additional information, see Note 4 to the consolidated financial statements.

Major tax incentives included within federal legislation resulted in the allowance of bonus depreciation for property placed in service in 2008 through 2015. These incentives, along with certain other deductions, have had a positive impact on the cash flows of Consolidated SCE&G. Bonus depreciation will also be significant for 2016 through 2019 under recent law.

Ratios of earnings to fixed charges for each of the five years ended December 31, 2015, were as follows:

December 31,	2015	2014	2013	2012	2011
SCE&G	3.69	3.77	3.48	3.29	3.13

NEW NUCLEAR CONSTRUCTION MATTERS

For a discussion of developments related to new nuclear construction, see Note 2 and Note 10 to the consolidated financial statements.

ENVIRONMENTAL MATTERS

Consolidated SCE&G's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on Consolidated SCE&G's financial condition, results of operations and cash flows. In addition, Consolidated SCE&G often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, Consolidated SCE&G expects to recover such expenditures and costs through existing ratemaking provisions.

For the three years ended December 31, 2015, Consolidated SCE&G's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $41.4 million. During this same period, Consolidated SCE&G expended approximately $38.5 million for the construction and retirement of landfills and ash ponds, net of disposal proceeds. In addition, Consolidated SCE&G made expenditures to operate and maintain environmental control equipment at its fossil plants of $8.7 million in 2015, $9.1 million in 2014 and $9.2 million in 2013, which are included in other operation and maintenance expense, and made expenditures to handle waste ash, net of disposal proceeds, of $1.3 million in 2015, $1.6 million in 2014 and $3.2 million in 2013, which are included in fuel used in electric generation. In addition, included within other operation and maintenance expense is an annual amortization of $1.4 million in each of 2015, 2014 and 2013 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for Consolidated SCE&G are $15.3 million for 2016 and $88.9 million for the four-year period 2017-2020. These expenditures are included in Consolidated SCE&G's Estimated Capital Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though Consolidated SCE&G cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, SCE&G and GENCO are subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. Consolidated SCE&G cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact Consolidated SCE&G, and the following discussion should not be considered all-inclusive.

Physical effects associated with climate changes could include changes in weather patterns, such as storm frequency and intensity, and any resultant damage to Consolidated SCE&G's electric system, as well as impacts on employees and customers and on Consolidated SCE&G's supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations, all in order to allow Consolidated SCE&G to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Environmental commitments and contingencies are further described in Note 10 to the consolidated financial statements.

REGULATORY MATTERS

SCE&G, GENCO and Fuel Company are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCE&G, GENCO and Fuel Company	The CFTC, under Dodd-Frank, concerning recordkeeping, reporting, and other related regulations associated with swaps, options, forward contracts, and trade options, to the extent SCE&G, GENCO and Fuel Company engage in any such activities.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions, wholesale electric power and transmission rates and services, and other matters; the PHMSA and the DOT as to federal pipeline safety requirements for gas distribution pipeline systems and natural gas transmission systems, respectively; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the wholesale sale of electric energy, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to the issuance of short-term borrowings, the wholesale sale of electric energy, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

SCE&G's electric transmission system is subject to NERC, which develops and enforces reliability standards for the bulk power systems throughout North America. NERC is subject to oversight by FERC.

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. SCE&G has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. SCE&G is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of Consolidated SCE&G's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Accounting for Rate Regulated Operations

Consolidated SCE&G's regulated operations record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, Consolidated SCE&G may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of Consolidated SCE&G's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of Consolidated SCE&G's regulatory assets and liabilities.

Consolidated SCE&G's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, Consolidated SCE&G could be required to write down its investment in those assets. Consolidated SCE&G cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect Consolidated SCE&G's results of operations in the period in which they would be recorded. As of December 31, 2015, Consolidated SCE&G's net investments in fossil/hydro and nuclear generation assets were $2.3 billion and $4.1 billion, respectively.

In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, Consolidated SCE&G could also be required to write off its regulatory assets and liabilities. Such an event could have a material effect on Consolidated SCE&G's results of operations, liquidity or financial position in the period the write-off would be recorded.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, SCE&G records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. As of December 31, 2015 and 2014, accounts receivable included unbilled revenues of $101.5 million and $115.8 million, respectively, compared to total revenues of $2.9 billion and $3.1 billion for the years 2015 and 2014, respectively.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G's accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and the estimated timing of cash flows. Changes in any of these estimates could significantly impact SCE&G's financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1on an after-tax basis.

Asset Retirement Obligations

Consolidated SCE&G accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from the acquisition, construction, development and normal operation in accordance with applicable accounting guidance. Consolidated SCE&G recognizes obligations at present value in the period in which they are incurred, and capitalizes associated asset retirement costs as part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to Consolidated SCE&G's utility operations, their recognition has no significant impact on results of operations. As of December 31, 2015, Consolidated SCE&G has recorded AROs of $176 million for nuclear plant decommissioning (as discussed above) and AROs of $312 million for other conditional obligations related to generation, transmission and distribution properties, including gas pipelines. All of the amounts are based upon estimates which are subject to varying degrees of imprecision, particularly since payments in settlement of such obligations may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

SCE&G participates in SCANA's noncontributory defined benefit pension plan, which covers substantially all regular, full-time employees. SCANA recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. Accounting guidance requires the use of several assumptions that impact pension cost, of which the discount rate and the expected return on assets are the most sensitive. SCANA's net pension cost of $18.0 million ($14.2 million attributable to SCE&G) recorded in 2015 reflects the use of a 4.20% discount rate derived using a cash flow matching technique, and an assumed 7.50% long-term rate of return on plan assets. SCANA believes that these assumptions and the resulting pension cost amount were reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2015 would have increased SCANA's pension cost by $1.9 million and increased the pension obligation by $26.8 million. Further, had the assumed long-term rate of return on assets been 7.25%, SCANA's pension cost for 2015 would have increased by $2.1 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

SCANA determines the fair value of the majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, SCANA evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2015, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.0%, 5.4%, 8.7% and 8.8%, respectively. The 2015 expected long-term rate of return of 7.50% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. SCANA regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2016, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 5.3%, 4.6%, 7.2% and 8.7%, respectively. For 2016, the expected rate of return is 7.50%.

Pursuant to regulatory orders, certain previously deferred pension costs are being amortized as described in Note 2 to the consolidated financial statements. Current pension expense for electric operations is being recovered through a pension cost rider, and current pension expense related to SCE&G's gas operations is being recovered through cost of service rates.

Pension benefits are not offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, the significance of pension costs and the criticality of the related estimates to SCE&G's financial statements will continue to diminish. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. SCANA accounts for the cost of the postretirement medical and life insurance benefit plan in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. SCANA used a discount rate of 4.30%, derived using a cash flow matching technique, and recorded a net cost to SCE&G of $15.8 million for 2015. Had the selected discount rate been 4.05% (25 basis points lower than the discount rate referenced above), the expense for 2015 would have been $0.6 million higher and increased the obligation by $9.5 million. Because the plan provisions include "caps" on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

OTHER MATTERS

Off-Balance Sheet Arrangements

Consolidated SCE&G holds insignificant investments in securities and businesses ventures. Consolidated SCE&G does not engage in significant off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment and rail cars.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments described in this section are held for purposes other than trading.

The tables below provide information about long-term debt issued by Consolidated SCE&G which is sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

December 31, 2015	Expected Maturity Date							
Millions of dollars	2016	2017	2018	2019	2020	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	110.4	10.1	719.8	9.1	8.3	3,873.0	4,730.7	5,095.0
Average Fixed Interest Rate (%)	1.13	4.50	6.02	4.73	4.94	5.71	5.64	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	63.7
Average Variable Interest Rate (%)	—	—	—	—	—	0.03	0.03	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	650.0	550.0	—	—	—	71.4	1,271.4	(49.8)
Average Pay Interest Rate (%)	2.87	2.88	—	—	—	3.28	2.90	—
Average Receive Interest Rate (%)	0.61	0.61	—	—	—	0.01	0.58	—

December 31, 2014	Expected Maturity Date							
Millions of dollars	2015	2016	2017	2018	2019	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	9.9	109.4	9.0	718.6	8.1	3,379.7	4,234.8	4,999.8
Average Fixed Interest Rate (%)	4.54	1.11	4.73	5.95	4.97	5.29	5.29	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	65.2
Average Variable Interest Rate (%)	—	—	—	—	—	0.04	0.04	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	950.0	100.0	—	—	—	67.8	1,117.8	(233.0)
Average Pay Interest Rate (%)	3.83	3.63	—	—	—	3.28	3.78	—
Average Receive Interest Rate (%)	0.26	0.26	—	—	—	0.04	0.24	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

For further discussion of Consolidated SCE&G’s long-term debt and interest rate derivatives, see ITEM 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholder of
South Carolina Electric & Gas Company
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of South Carolina Electric & Gas Company and affiliates (the "Company") as of December 31, 2015 and 2014, and the related consolidated statements of income, comprehensive income, cash flows, and changes in equity for each of the three years in the period ended December 31, 2015. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2015 and 2014, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2015, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

Notes to Consolidated Financial Statements

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCE&G, a public utility, is a South Carolina corporation organized in 1924 and a wholly-owned subsidiary of SCANA, a South Carolina corporation. Consolidated SCE&G engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina and in the purchase, sale and transportation of natural gas to retail customers in South Carolina.

SCE&G has determined that it has a controlling financial interest in GENCO and Fuel Company (which are considered to be VIEs), and accordingly, the accompanying consolidated financial statements include the accounts of SCE&G, GENCO and Fuel Company. The equity interests in GENCO and Fuel Company are held solely by SCANA, SCE&G's parent. Accordingly, GENCO's and Fuel Company's equity and results of operations are reflected as noncontrolling interest in Consolidated SCE&G's consolidated financial statements. Intercompany balances and transactions between SCE&G, Fuel Company and GENCO have been eliminated in consolidation.

GENCO owns a coal-fired electric generating station with a 605 megawatt net generating capacity (summer rating). GENCO's electricity is sold, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a power purchase agreement and related operating agreement. The effects of these transactions are eliminated in consolidation. Substantially all of GENCO's property (carrying value of approximately $491 million) serves as collateral for its long-term borrowings. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission and other environmental allowances. See also Note 4.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Reclassifications

In April 2015, the FASB issued accounting guidance intended to simplify the presentation of debt issuance costs by requiring that such costs be deducted from carrying amounts related to debt when presented in the balance sheet. As permitted, Consolidated SCE&G adopted this guidance retrospectively in the fourth quarter of 2015. As a result, for 2014 $29 million of unamortized debt issuance costs were reclassified to long-term debt, and certain amounts in Note 4 and Note 12 were also reclassified for comparative periods. The effect of adoption on Consolidated SCE&G's results of operations and cash flows was not significant.

In November 2015, the FASB issued accounting guidance intended to simplify the presentation of deferred tax assets and deferred tax liabilities by netting and classifying them as noncurrent on the statement of financial position. As permitted, Consolidated SCE&G early adopted this guidance retrospectively in the fourth quarter of 2015. As a result, for 2014 $27.9 million of net deferred tax liabilities previously classified in current liabilities were reclassified to long-term liabilities. The effect of adoption on Consolidated SCE&G's results of operations and cash flows was not significant.

Utility Plant

Utility plant is stated at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset's life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. Consolidated SCE&G calculated AFC using average composite rates of 5.6% for 2015, 6.5% for 2014 and 6.9% for 2013. These rates do not exceed the maximum allowable rate as calculated under FERC Order No. 561. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

Consolidated SCE&G records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. In 2015, SCE&G adopted lower depreciation rates for electric and common plant, as approved by the SCPSC and further described in Note 2. The composite weighted average depreciation rates for utility plant assets were 2.56% in 2015, 2.84% in 2014 and 2.94% in 2013.

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in “Fuel used in electric generation” and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2015		2014	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.2 billion	—	$ 1.2 billion	—
Accumulated depreciation	$ 620.4 million	—	$ 578.3 million	—
Construction work in progress	$ 214.6 million	$ 3.4 billion	$ 199.3 million	$ 2.7 billion

For a discussion of expected cash outlays and expected in-service dates for the New Units and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within other receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $178.8 million at December 31, 2015 and $88.9 million at December 31, 2014.

Plant to be Retired

At December 31, 2014, SCE&G expected to retire three units that are or were coal-fired by 2020, which was prior to the end of the previously estimated useful lives over which the units were being depreciated. As such, these units were identified as Plant to be Retired. Subsequently, these units were converted to be gas-fired. In the third quarter of 2015, in connection with the adoption of a customary depreciation study and related analysis (see Note 2), SCE&G determined that these units would not likely be retired by 2020, and their depreciation rates were set to recover the units' net carrying value over their respective revised useful lives. Accordingly, the net carrying value of these units is no longer classified as Plant to be Retired at December 31, 2015.

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections are classified as a regulatory asset or regulatory liability on the consolidated balance sheet. Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2015 and 2014, SCE&G incurred $16.5 million and $19.4 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. As approved by the SCPSC, effective January 1, 2013, SCE&G accrues $1.4 million per month for its portion of the nuclear refueling outages that are scheduled for the spring of 2014 throught the spring of 2020. Total costs for 2014 were $43.7 million, of which SCE&G was responsible for $29.1 million. Total costs for 2015 were $40.2 million, of which SCE&G was responsible for $26.8 million.

Nuclear Decommissioning

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each period presented) are invested in insurance policies on the lives of certain SCE&G and affiliate personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

Consolidated SCE&G considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Receivables

Customer receivables reflect amounts due from customers arising from the delivery of energy or related services and include both billed and unbilled amounts earned pursuant to revenue recognition practices described below. Customer receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.
Other receivables consist primarily of amounts due from Santee Cooper related to the construction and operation of jointly owned nuclear generating facilities at Summer Station.

Inventories

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas, fuel oil and emission allowances. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC.

Income Taxes

Consolidated SCE&G is included in the consolidated federal income tax returns of SCANA. Under a joint consolidated income tax allocation agreement, each SCANA subsidiary's current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers; otherwise, they are charged or credited to income tax expense. Also under provisions of the income tax allocation agreement, certain tax benefits of the parent holding company are distributed in cash to tax paying affiliates, including Consolidated SCE&G, in the form of capital contributions.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G records costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or record revenue in a period different from the period in which the revenue would be recorded by a nonregulated enterprise. These expenses deferred for future recovery from customers or obligations to be refunded to customers are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs or revenues in the ratemaking process. Deferred amounts expected to be recovered or repaid within 12 months are classified in the balance sheet as receivables or accounts payable, respectively.

Debt Issuance Premiums, Discounts and Other Costs

Consolidated SCE&G presents long-term debt premiums, discounts and debt issuance costs within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. Gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are expensed as incurred.

Income Statement Presentation

Consolidated SCE&G presents the revenues and expenses of its regulated activities (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense).

Revenue Recognition

Consolidated SCE&G records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $101.5 million at December 31, 2015 and $115.8 million at December 31, 2014.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. The SCPSC establishes this component during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

Customers subject to the PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor.

SCE&G’s gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. An eWNA for SCE&G's electric customers was discontinued effective with the first billing cycle of 2014 as approved by the SCPSC.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

New Accounting Matters

In May 2014, the FASB issued accounting guidance for revenue arising from contracts with customers that supersedes most current revenue recognition guidance, including industry-specific guidance. This revenue recognition model provides a five-step analysis in determining when and how revenue is recognized, and will require revenue recognition to depict the transfer of promised goods or services to customers in an amount that reflects the consideration a company expects to receive in exchange for those goods or services. Consolidated SCE&G is required to adopt this guidance in the first quarter of 2018 and early adoption is permitted in the first quarter of 2017. Adoption using a retrospective method is required, with options to elect certain practical expedients or to recognize a cumulative effect in the year of initial adoption. Consolidated SCE&G has not determined when it will adopt this guidance or what elections it will make. Consolidated SCE&G has not determined the impact this guidance will have on its results of operations, cash flows or financial position.

In April 2015, the FASB issued accounting guidance related to fees paid by a customer in a cloud computing arrangement. Among other things, the guidance clarifies how to account for a software license element included in a cloud computing arrangement, and makes explicit that a cloud computing arrangement not containing a software license element should be accounted for as a service contract. Consolidated SCE&G has determined that this guidance, when adopted in the first quarter of 2016, will not significantly impact Consolidated SCE&G's results of operations, cash flows or financial position.

In July 2015, the FASB issued accounting guidance intended to simplify the subsequent measurement of inventory cost by requiring most inventory to be measured at the lower of cost and net realizable value. Consolidated SCE&G expects to adopt this guidance when required in the first quarter of 2017. Consolidated SCE&G is evaluating this guidance and has not determined what impact it will have on its results of operations, cash flows or financial position.

In January 2016, the FASB issued accounting guidance intended to clarify the classification and measurement of financial instruments and financial liabilities, among other things. Consolidated SCE&G expects to adopt this guidance when required in the first quarter of 2018. Consolidated SCE&G is evaluating this guidance and has not determined what impact it will have on its results of operations, cash flows or financial position.

In February 2016, the FASB issued accounting guidance related to the recognition, measurement and presentation of leases. The guidance applies a right-of-use model and, for lessees, requires all leases with a duration over twelve months to be recorded on the balance sheet, with the rights of use treated as assets and the payment obligations treated as liabilities. Further, and without consideration of any regulatory accounting requirements which may apply, depending primarily of the nature of the assets and the relative consumption of them, lease costs will be recognized either through the separate amortization of the right-of-use asset and the recognition of the interest cost related to the payment obligation, or through the recording of a combined straight-line rental expense. For lessors, the guidance calls for the recognition of income either through the derecognition of assets and subsequent recording of interest income on lease amounts receivable, or through the recognition of rental income on a straight line basis, also depending on the nature of the assets and relative consumption. The guidance will be effective for year beginning in 2019. Consolidated SCE&G has not determined what impact this guidance will have on its results of operations, cash flows or financial position.

2. RATE AND OTHER REGULATORY MATTERS

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased by SCE&G.

Pursuant to a November 2013 SCPSC accounting order, SCE&G's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

Pursuant to an April 2014 SCPSC order, SCE&G increased its base fuel cost component by approximately $10.3 million for the 12-month period beginning with the first billing cycle of May 2014. The base fuel cost increase was offset by a reduction in SCE&G's rate rider related to pension costs approved by the SCPSC in March 2014. In addition, pursuant to the April 2014 order, electric revenue for 2014 was reduced by approximately $46 million for adjustments to the fuel cost component and related under-collected fuel balance. Such adjustments are fully offset by the recognition within other income of gains realized from the late 2013 settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. The order also provided for the accrual of certain debt-related carrying costs on its under-collected balance of base fuel costs from May 1, 2014 through April 30, 2015.

The cost of fuel includes amounts paid by SCE&G pursuant to the Nuclear Waste Act for the disposal of spent nuclear fuel. As a result of a November 2013 decision by the Court of Appeals, the DOE set the Nuclear Waste Act fee to zero effective May 16, 2014. The impact of changes to the Nuclear Waste Act fee is considered during annual fuel rate proceedings.

By order dated April 30, 2015, the SCPSC approved a settlement agreement among SCE&G and certain other parties in which SCE&G agreed to decrease the total fuel cost component of retail electric rates. Under this order, SCE&G is to recover an amount equal to its under-collected balance of base fuel and variable environmental costs as of April 30, 2015, over the subsequent 12-month period beginning with the first billing cycle of May 2015.

By order dated July 15, 2015, the SCPSC approved a settlement agreement among SCE&G and certain other parties concerning SCE&G's petition for approval to participate in a DER program and to recover DER program costs as a separate component of SCE&G's overall fuel factor. Under this order, SCE&G will, among other things, implement programs to encourage the development of renewable energy facilities with a total nameplate capacity of at least approximately 84.5 MW by the end of 2020, of which half is to be customer-scale solar capacity and half is to be utility-scale solar capacity. SCE&G is to make a good faith effort to have at least 30 MW of utility-scale solar capacity in service by the end of 2016.

By order dated September 16, 2015, the SCPSC approved SCE&G's request to adopt lower depreciation rates for electric and common plant effective January 1, 2015. These rates were based on the results of a depreciation study conducted by SCE&G using utility plant balances as of December 31, 2014. In connection with the adoption of the revised depreciation rates, SCE&G recorded lower depreciation expense of approximately $29 million in 2015, and pursuant to the SCPSC order, SCE&G reduced its electric operating revenues by approximately $14.5 million with an offset to under-collected fuel included within Receivables in the balance sheet. Accordingly, SCE&G's net income for 2015 increased approximately $9.8 million as a result of this change in estimate.

In October 2015, the SCPSC initiated its 2016 annual review of base rates for fuel costs. A public hearing for this annual review is scheduled for April 7, 2016.

Electric - Base Rates

Prior to 2014, certain of SCE&G's electric rates included an adjustment for eWNA. The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition. In connection with the termination of the eWNA effective December 31, 2013, and pursuant to an SCPSC order, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. This revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives, which gains had been deferred as a regulatory liability.

Pursuant to an SCPSC order, SCE&G removes from rate base deferred income tax assets arising from capital expenditures related to the New Units and accrues carrying costs on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G’s weighted average long-term debt borrowing rate and are recorded as a regulatory asset and other income. Carrying costs totaled $9.5 million and $5.8 million during 2015 and 2014, respectively. SCE&G anticipates that when the New Units are placed in service and accelerated tax depreciation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

The SCPSC has approved a suite of DSM Programs for development and implementation. SCE&G offers to its retail electric customers several distinct programs designed to assist customers in reducing their demand for electricity and improving their energy efficiency. SCE&G submits annual filings to the SCPSC related to these programs which include actual program costs, net lost revenues (both forecasted and actual), customer incentives, and net program benefits, among other things. As actual DSM Program costs are incurred, they are deferred as regulatory assets and recovered through a rate rider approved by the SCPSC. The rate rider also provides for recovery of net lost revenues and for a shared savings incentive. The SCPSC approved the following rate riders pursuant to the annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2015	First billing cycle of May	$32.0 million
2014	First billing cycle of May	$15.4 million
2013	First billing cycle of May	$16.9 million

In April 2014, the SCPSC issued an order approving, among other things, SCE&G’s request to utilize approximately $17.8 million of the gains from the late 2013 settlement of certain interest rate derivative instruments, previously deferred as regulatory liabilities, to offset a portion of SCE&G’s DSM Programs rate rider. This order also allowed SCE&G to apply $5.0 million of its storm damage reserve and $5.0 million of the gains from the settlement of certain interest rate derivative instruments to offset previously deferred amounts.

In January 2016, SCE&G submitted its annual DSM Programs filing to the SCPSC. If approved, the filing would allow recovery of $37.6 million of costs and net lost revenues associated with the DSM Programs, along with an incentive to invest in such programs.

Electric - BLRA

Under the BLRA, SCE&G may file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Through 2015, requested rate adjustments have been based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved recovery of the following amounts under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	Increase	Amount
2015	2.6%	$64.5 million
2014	2.8%	$66.2 million
2013	2.9%	$67.2 million

In September 2015, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%. This revised return on equity will be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016, until such time as the New Units are completed. See Note 10.

Gas

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	Action	Amount
2015	No change	—
2014	0.6% Decrease	$ 2.6 million
2013	No change	—

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred, including transportation costs. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2015 and 2014 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each of the review periods were reasonable and prudent.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G has significant cost-based, rate-regulated operations and recognizes in its financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, Consolidated SCE&G has recorded regulatory assets and regulatory liabilities, which are summarized in the following tables. Other than unrecovered plant, substantially all regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

Millions of dollars	December 31, 2015	2014
Regulatory Assets:		
Accumulated deferred income taxes	$ 291	$ 278
AROs and related funding	384	347
Deferred employee benefit plan costs	295	310
Deferred losses on interest rate derivatives	535	453
Unrecovered plant	127	137
Environmental remediation costs	35	36
DSM Programs	61	56
Other	129	128
Total Regulatory Assets	$ 1,857	$ 1,745
Regulatory Liabilities:		
Asset removal costs	519	505
Deferred gains on interest rate derivatives	96	82
Other	20	23
Total Regulatory Liabilities	$ 635	$ 610

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to AFC and are expected to be recovered over the remaining lives of the related property which may range up to approximately 85 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 110 years.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under GAAP. Deferred employee benefit plan costs represent pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. Accordingly, in 2013 SCE&G began recovering through utility rates approximately $63 million of deferred pension costs for electric operations over approximately 30 years and approximately $14 million of deferred pension costs for gas operations over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments made or received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt through 2043. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense through 2065 except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G will amortize these amounts through cost of service rates over the units' previous estimated remaining useful lives through approximately 2025. Unamortized amounts are included in rate base and are earning a current return.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by SCE&G and are expected to be recoverable over periods of up to approximately 24 years.

DSM Programs represent deferred costs associated with such programs. As a result of an April 2015 SCPSC order, deferred costs are currently being recovered over approximately five years through an approved rate rider.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the removal of assets in the future.

The SCPSC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by SCE&G. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, Consolidated SCE&G could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on Consolidated SCE&G's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. EQUITY

Authorized shares of SCE&G common stock were 50 million as of December 31, 2015 and 2014. Authorized shares of SCE&G preferred stock were 20 million, of which 1,000 shares, no par value, were held by SCANA as of December 31, 2015 and 2014.

SCE&G's articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G's bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2015 and 2014, retained earnings of approximately $72.4 million and $67.7 million, respectively, were restricted by this requirement as to payment of cash dividends on common stock.

4. LONG-TERM AND SHORT-TERM DEBT

Total long-term debt, net reflects the retrospective adoption of accounting guidance for unamortized debt issuance costs in the fourth quarter of 2015 (see Note 1). Long-term debt by type with related weighted average effective interest rates and maturities at December 31 is as follows:

		2015		2014	
Dollars in millions	**Maturity**	**Balance**	**Rate**	**Balance**	**Rate**
First Mortgage Bonds (secured)	2018 - 2065	$ 4,340	5.78%	$ 3,840	5.56%
GENCO Notes (secured)	2016 - 2024	220	5.92%	227	5.90%
Industrial and Pollution Control Bonds (a)	2028 - 2038	122	3.51%	122	3.51%
Nuclear Fuel Financing	2016	100	0.78%	100	0.78%
Other	2016 - 2027	17	2.63%	14	2.63%
Total debt		4,799		4,303	
Current maturities of long-term debt		(110)		(10)	
Unamortized premium, net		2		6	
Unamortized debt issuance costs		(32)		(29)	
Total long-term debt, net		$ 4,659		$ 4,270	

(a) Includes variable rate debt of $67.8 million at December 31, 2015 (rate of 0.03%) and 2014 (rate of 0.04%), which are hedged by fixed swaps.

In May 2015, SCE&G issued $500 million of 5.1% first mortgage bonds due June 1, 2065. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

Long-term debt maturities will be $110 million in 2016, $10 million in 2017, $720 million in 2018, $9 million in 2019 and $8 million in 2020.

Substantially all electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2015, the Bond Ratio was 5.17.

Lines of Credit and Short-Term Borrowings

At December 31, 2015 and 2014, SCE&G (including Fuel Company) had available the following committed LOC and had outstanding the following LOC-related obligations and commercial paper borrowings:

Millions of dollars	2015	2014
Lines of credit:		
Total committed long-term	$ 1,400	$ 1,400
Outstanding commercial paper (270 or fewer days)	$ 420	$ 709
Weighted average interest rate	0.74%	0.52%
Letters of credit supported by an LOC	$ 0.3	$ 0.3
Available	$ 980	$ 691

SCE&G and Fuel Company are parties to five-year credit agreements in the amount of $1.2 billion (of which $500 million relates to Fuel Company). In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In December 2015, the term of the five-year agreements was amended and extended by one year, such that they expire in December 2020. The three-year agreement expires in December 2018. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N.A. and Morgan Stanley Bank, N.A. each provide 9.5% of the aggregate credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch, UBS Loan Finance LLC, MUFG Union Bank, N.A., and Branch Banking and Trust Company each provide 7.9%, and Royal Bank of Canada and U.S. Bank National Association each provide 5.5%. Two other banks provide the remaining support. Consolidated SCE&G pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

Consolidated SCE&G is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by TD Bank N.A. These letters of credit expire, subject to renewal, in the fourth quarter of 2019.

Consolidated SCE&G participates in a utility money pool with SCANA and certain other subsidiaries of SCANA. Money pool borrowings and investments bear interest at short-term market rates. Consolidated SCE&G's interest income and expense from money pool transactions were not significant for any period presented. At December 31, 2015 Consolidated SCE&G had outstanding money pool borrowings due to an affiliate of $33 million and money pool investments due from an affiliate of $9 million. At December 31, 2014 Consolidated SCE&G had outstanding money pool borrowings due to an affiliate of $83 million and money pool investments due from an affiliate of $80 million. On the consolidated balance sheets, amounts due from an affiliate are included within Receivables-affiliated companies, and amounts due to an affiliate are included within Affiliated payables.

5. INCOME TAXES

Components of income tax expense are as follows:

Millions of dollars	2015	2014	2013
Current taxes:			
Federal	$ 208	$ 39	$ 146
State	32	(6)	13
Total current taxes	240	33	159
Deferred tax (benefit) expense, net:			
Federal	(3)	157	25
State	(3)	32	9
Total deferred taxes	(6)	189	34
Investment tax credits:			
Amortization of amounts deferred—state	(1)	(1)	(1)
Amortization of amounts deferred—federal	(2)	(3)	(3)
Total investment tax credits	(3)	(4)	(4)
Total income tax expense	$ 231	$ 218	$ 189

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2015	2014	2013
Net income	$ 466	$ 446	$ 380
Income tax expense	231	218	189
Noncontrolling interest	14	12	11
Total pre-tax income	$ 711	$ 676	$ 580
Income taxes on above at statutory federal income tax rate	$ 249	$ 237	$ 203
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	24	21	18
State investment tax credits (less federal income tax effect)	(6)	(5)	(5)
Allowance for equity funds used during construction	(9)	(10)	(9)
Amortization of federal investment tax credits	(2)	(3)	(3)
Section 41 tax credits	1	(3)	—
Section 45 tax credits	(9)	(9)	(5)
Domestic production activities deduction	(18)	(7)	(11)
Other differences, net	1	(3)	1
Total income tax expense	$ 231	$ 218	$ 189

The tax effects of significant temporary differences comprising Consolidated SCE&G's net deferred tax liability are as follows:

Millions of dollars	2015	2014
Deferred tax assets:		
Nondeductible accruals	$ 52	$ 47
Asset retirement obligation, including nuclear decommissioning	187	205
Unamortized investment tax credits	16	17
Deferred fuel costs	7	—
Financial instruments	2	—
Other	2	6
Total deferred tax assets	266	275
Deferred tax liabilities:		
Property, plant and equipment	$ 1,644	$ 1,623
Regulatory asset, asset retirement obligation	127	115
Deferred employee benefit plan costs	85	91
Deferred fuel costs	—	27
Regulatory asset, unrecovered plant	49	53
Regulatory asset, net loss on interest rate derivative contracts settlement	—	21
Demand side management costs	23	21
Prepayments	29	25
Other	41	23
Total deferred tax liabilities	1,998	1,999
Net deferred tax liability	$ 1,732	$ 1,724

Consolidated SCE&G is included in the consolidated federal income tax return of SCANA and files various applicable state and local income tax returns. The IRS has completed examinations of SCANA's federal returns through 2004, and SCANA's federal returns through 2007 are closed for additional assessment. The IRS is currently examining SCANA's open federal returns through 2014 as a result of claims discussed below in Changes to Unrecognized Tax Benefits. With few exceptions, Consolidated SCE&G is no longer subject to state and local income tax examinations by tax authorities for years before 2010.

Changes to Unrecognized Tax Benefits

Millions of dollars	2015	2014	2013
Unrecognized tax benefits, January 1	$ 16	$ 3	—
Gross increases-uncertain tax positions in prior period	33	—	—
Gross decreases-uncertain tax positions in prior period	(2)	—	—
Gross increases-current period uncertain tax positions	2	13	$ 3
Unrecognized tax benefits, December 31	$ 49	$ 16	$ 3

During 2013 and 2014, Consolidated SCE&G amended certain of its tax returns to claim certain tax-defined research and development deductions and credits and its related impact on domestic production activities. Consolidated SCE&G also made similar claims in filing its 2013 and 2014 returns in 2014 and 2015, respectively. In connection with these federal and state filings, Consolidated SCE&G recorded an unrecognized tax benefit of $49 million. During 2015, as the IRS' examination progressed, without resolution, Consolidated SCE&G evaluated and recorded adjustments to its unrecognized tax benefits; however, none of these changes materially affected Consolidated SCE&G's effective tax rate. If recognized, $17 million of the tax benefits would affect Consolidated SCE&G's effective tax rate. It is reasonably possible that these tax benefits will increase by an additional $7 million within the next 12 months. It is also reasonably possible that these tax benefits may decrease by $8 million within the next 12 months. No other material changes in the status of Consolidated SCE&G's tax positions have occurred through December 31, 2015.

Consolidated SCE&G recognizes interest accrued related to unrecognized tax benefits within interest expense or interest income and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit, Consolidated SCE&G has not recorded a material amount of interest income, interest expense, or penalties associated with any uncertain tax position.

6. DERIVATIVE FINANCIAL INSTRUMENTS

Consolidated SCE&G recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. Consolidated SCE&G recognizes changes in the fair value of derivative instruments either in earnings or within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by Consolidated SCE&G. SCANA's Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries, including Consolidated SCE&G. The Risk Management Committee, which is comprised of certain officers, including Consolidated SCE&G's Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to their attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Interest Rate Swaps

Consolidated SCE&G synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges. Periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, Consolidated SCE&G may use treasury rate lock or forward starting swap agreements. Pursuant to regulatory orders, interest derivatives entered into by SCE&G after October 2013 are not designated as cash flow hedges, and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Settlement losses on swaps will be amortized over the lives of subsequent debt issuances and gains may be applied to under-collected fuel, may be amortized to interest expense or may be applied as otherwise directed by the SCPSC. As discussed in Note 2, in 2013 the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income in 2013, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013. As also discussed in Note 2, pursuant to regulatory orders in 2014, the SCPSC directed SCE&G to apply $46 million of these deferred gains to reduce under-collected fuel to utilize approximately $17.8 million of these gains to offset a portion of the net lost revenues component of SCE&G's DSM Program rider, and to apply $5.0 million of the gains to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

Consolidated SCE&G was a party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $36.4 million and $36.4 million at December 31, 2015 and 2014, respectively. Consolidated SCE&G was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.235 billion and $1.085 billion at December 31, 2015 and 2014, respectively.

The fair value of derivatives in the consolidated balance sheets is as follows:

Fair Values of Derivative Instruments

Millions of dollars	Balance Sheet Location	Asset	Liability
As of December 31, 2015			
Designated as hedging instruments			
Interest rate contracts	Derivative financial instruments		$ 1
	Other deferred credits and other liabilities		9
Total			$ 10
Not designated as hedging instruments			
Interest rate contracts	Other current assets	$ 10	
	Other deferred debits and other assets	5	
	Derivative financial instruments		$ 33
	Other deferred credits and other liabilities		22
Total		$ 15	$ 55
As of December 31, 2014			
Designated as hedging instruments			
Interest rate contracts	Derivative financial instruments		$ 1
	Other deferred credits and other liabilities		8
Total			$ 9
Not designated as hedging instruments			
Interest rate contracts	Derivative financial instruments		$ 207
	Other deferred credits and other liabilities		17
Total			$ 224

The effect of derivative instruments on the consolidated statements of income is as follows:

Derivatives in Cash Flow Hedging Relationships		Gain (Loss) Reclassified from Deferred Accounts into Income (Effective Portion)	
Millions of dollars	Gain (Loss) Deferred in Regulatory Accounts (Effective Portion)	Location	Amount
Year Ended December 31, 2015			
Interest rate contracts	$ (3)	Interest expense	$ (3)
Year Ended December 31, 2014			
Interest rate contracts	$ (9)	Interest expense	$ (3)
Year Ended December 31, 2013			
Interest rate contracts	$ 106	Interest expense	$ (3)

As of December 31, 2015, Consolidated SCE&G expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from cash flow hedges designated as hedging instruments will include approximately $2.2 million as an increase to interest expense assuming financial markets remain at their current levels.

Hedge Ineffectiveness

Other gains (losses) recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant for all periods presented.

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts	Gain Reclassified from Deferred Accounts into Income	
		Location	Amount
Year Ended December 31, 2015			
Interest rate contracts	$ (69)	Other income	$ 5
Year Ended December 31, 2014			
Interest rate contracts	$ (352)	Other income	$ 64
Year Ended December 31, 2013			
Interest rate contracts	$ 39	Other income	$ 50

The gains reclassified to other income offset revenue reductions as previously described herein and in Note 2.

As of December 31, 2015, Consolidated SCE&G expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from interest rate swaps not designated as cash flow hedges will include approximately $0.6 million as an increase to interest expense.

Credit Risk Considerations

Consolidated SCE&G limits credit risk in its derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, Consolidated SCE&G uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. Consolidated SCE&G uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with Consolidated SCE&G's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of Consolidated SCE&G’s derivative instruments contain contingent provisions that require Consolidated SCE&G to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2015 and 2014, Consolidated SCE&G had posted $13.4 million and $107.1 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months are recorded in Other Current Assets on the consolidated balance sheets. Collateral related to the noncurrent positions is recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2015 and 2014, Consolidated SCE&G would have been required to post an additional $43.6 million and $125.9 million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2015 and 2014, are $57.0 million and $233.0 million, respectively.

In addition, as of December 31, 2015 and December 31, 2014, Consolidated SCE&G has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2015 and December 31, 2014, Consolidated SCE&G could request $7.3 million and $- million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2015 and December 31, 2014 is $7.3 million and $- million, respectively.

Information related to Consolidated SCE&G's offsetting derivative assets and liabilities follows:

Offsetting Derivative Assets

Millions of dollars	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Received	Net Amount
As of December 31, 2015						
Interest rate	$ 15	—	$ 15	$ (8)	—	$ 7

Balance sheet location	Other current assets	$ 10
	Other deferred debits and other assets	5
	Total	$ 15

As of December 31, 2014 Consolidated SCE&G had no derivative assets.

Offsetting Derivative Liabilities

Millions of dollars	Gross Amounts of Recognized Liabilities	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Posted	Net Amount
As of December 31, 2015						
Interest rate	$ 65	—	$ 65	$ (8)	$ (13)	$ 44

Balance sheet location	Derivative financial instruments	$ 34
	Other deferred credits and other liabilities	31
	Total	$ 65

Millions of dollars	Gross Amounts of Recognized Liabilities	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Financial Instruments	Cash Collateral Posted	Net Amount
As of December 31, 2014						
Interest rate	$ 233	—	$ 233	—	$ (107)	$ 126

Balance sheet location	Derivative financial instruments	$ 208
	Other deferred credits and other liabilities	25
	Total	$ 233

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

Consolidated SCE&G's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value Level 2 measurements were as follows:

	As of December 31, 2015	As of December 31, 2014
Millions of dollars	**Level 2**	**Level 2**
Assets-Interest rate contracts	$ 15	—
Liabilities-Interest rate contracts	65	$ 233

There were no Level 1 or Level 3 fair value measurements for either period presented and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2015 and December 31, 2014 were as follows:

	As of December 31, 2015		As of December 31, 2014	
Millions of dollars	**Carrying Amount**	**Estimated Fair Value**	**Carrying Amount**	**Estimated Fair Value**
Long-term debt	$ 4,769.0	$ 5,129.1	$ 4,279.5	$ 5,041.9

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

SCE&G participates in SCANA's noncontributory defined benefit pension plan, which covers regular, full-time employees hired before January 1, 2014. SCANA's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

SCANA's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all eligible employees hired subsequently. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost, while employees hired subsequently are responsible for the full costs of retiree medical benefits elected by them. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

The same benefit formula applies to all SCANA subsidiaries participating in the parent sponsored plans and, with regard to the pension plan, there are no legally separate asset pools. The postretirement benefit plans are accounted for as multiple employer plans. The information presented below reflects Consolidated SCE&G's portion of the obligations, assets, funded status, net periodic benefit costs, and other information reported for the parent sponsored plans as a whole. The tabular data presented reflects the use of various cost assignment methodologies and participation assumptions based on Consolidated SCE&G's past and current employees and its share of plan assets.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

Millions of dollars	Pension Benefits 2015	Pension Benefits 2014	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014
Benefit obligation, January 1	$ 773.7	$ 695.7	$ 204.1	$ 181.7
Service cost	19.3	16.0	4.4	3.6
Interest cost	32.2	34.1	9.4	9.4
Plan participants' contributions	—	—	1.9	1.8
Actuarial (gain) loss	(47.0)	82.7	(15.7)	18.6
Benefits paid	(54.2)	(54.8)	(10.3)	(9.6)
Amounts funded to parent	—	—	(2.1)	(1.4)
Benefit obligation, December 31	$ 724.0	$ 773.7	$ 191.7	$ 204.1

SCANA adopted new mortality tables and an improvement scale published by the Society of Actuaries in 2014, resulting in an actuarial loss for pension and other post retirement benefit obligations of approximately $22.1 million and $2.1 million, respectively, in 2014. In 2015, based on an evaluation of the mortality experience of the pension plan, SCANA adopted a custom mortality table for purposes of measuring pension and other postretirement benefit obligations at year-end. This change resulted in an actuarial gain for pension and other postretirement benefit obligations of approximately $18.2 million and $2.0 million, respectively, in 2015.

The accumulated benefit obligation for pension benefits was $702.0 million at the end of 2015 and $747.6 million at the end of 2014. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

	Pension Benefits 2015	Pension Benefits 2014	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014
Annual discount rate used to determine benefit obligation	4.68%	4.20%	4.78%	4.30%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.00%	3.00%	3.00%

A 7.0% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2015. The rate was assumed to decrease gradually to 5.0% for 2021 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation by $0.6 million at December 31, 2015 and by $0.9 million at December 31, 2014. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation by $0.6 million at December 31, 2015 and by $0.8 million at December 31, 2014.

Funded Status

Millions of Dollars December 31,	Pension Benefits 2015	Pension Benefits 2014	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014
Fair value of plan assets	$ 720.1	$ 783.6	—	—
Benefit obligation	724.0	773.7	$ 191.7	$ 204.1
Funded status	$ (3.9)	$ 9.9	$ (191.7)	$ (204.1)

Amounts recognized on the consolidated balance sheets were as follows:

Millions of Dollars December 31,	Pension Benefits 2015	Pension Benefits 2014	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014
Current liability	—	—	$ (9.8)	$ (8.5)
Noncurrent asset	—	$ 9.9	—	—
Noncurrent liability	$ (3.9)	—	(181.9)	(195.6)

Amounts recognized in accumulated other comprehensive loss were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2015	2014	2015	2014
Net actuarial loss	$ 2.0	$ 1.9	$ 0.7	$ 1.0
Prior service cost	—	0.1	—	—
Total	$ 2.0	$ 2.0	$ 0.7	$ 1.0

Amounts recognized in regulatory assets were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2015	2014	2015	2014
Net actuarial loss	$ 193.7	$ 191.9	$ 20.4	$ 35.9
Prior service cost	5.2	8.3	0.2	0.5
Total	$ 198.9	$ 200.2	$ 20.6	$ 36.4

In connection with the joint ownership of Summer Station, as of December 31, 2015 and 2014, SCE&G recorded within deferred debits $20.3 million and $17.8 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2015 and 2014, SCE&G also recorded within deferred debits $13.8 million and $15.1 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2015	2014
Fair value of plan assets, January 1	$ 783.6	$ 792.1
Actual return (loss) on plan assets	(9.3)	46.3
Benefits paid	(54.2)	(54.8)
Fair value of plan assets, December 31	$ 720.1	$ 783.6

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. During 2013, in connection with the amendments to the plan, SCANA adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The pension plan asset allocation at December 31, 2015 and 2014 and the target allocation for 2016 are as follows:

	Percentage of Plan Assets		
	Target Allocation	December 31,	
Asset Category	2016	2015	2014
Equity Securities	58%	57%	57%
Fixed Income	33%	32%	34%
Hedge Funds	9%	11%	9%

For 2016, the expected long-term rate of return on assets will be 7.50%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes the target allocation is achieved. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment strategy described previously.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2015 and 2014, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	Fair Value Measurements at Reporting Date Using					
Millions of dollars	Total	Level 2	Level 3	Total	Level 2	Level 3
	December 31, 2015			*December 31, 2014*		
Mutual funds	$ 496	$ 496	—	$ 566	$ 566	—
Short-term investment vehicles	12	12	—	18	18	—
US Treasury securities	20	20	—	6	6	—
Corporate debt securities	72	72	—	78	78	—
Municipals	13	13	—	14	14	—
Limited partnerships	30	30	—	29	29	—
Multi-strategy hedge funds	77	—	$ 77	73	—	$ 73
	$ 720	$ 643	$ 77	$ 784	$ 711	$ 73

At December 31, 2015, assets with fair value measurements classified as Level 1 were insignificant. There were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during 2015 or 2014.

The pension plan values certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

	Fair Value Measurements Level 3	
Millions of dollars	2015	2014
Beginning Balance	$ 73	$ 69
Unrealized gains included in changes in net assets	4	4
Purchases, issuances, and settlements	—	—
Ending Balance	$ 77	$ 73

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from Consolidated SCE&G's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	Pension Benefits	Other Postretirement Benefits
2016	$ 65.1	$ 9.8
2017	63.2	10.5
2018	64.7	11.1
2019	65.3	11.7
2020	65.8	12.3
2021 - 2025	338.3	66.1

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, SCE&G does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

Consolidated SCE&G records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2015	2014	2013	2015	2014	2013
Service cost	$ 19.3	$ 16.0	$ 17.6	$ 4.4	$ 3.6	$ 4.6
Interest cost	32.2	34.1	32.6	9.4	9.4	8.7
Expected return on assets	(52.2)	(56.3)	(51.9)	n/a	n/a	n/a
Prior service cost amortization	3.4	3.5	5.0	0.3	0.3	0.6
Amortization of actuarial losses	11.4	4.0	14.3	1.7	—	2.6
Curtailment	—	—	8.4	—	—	—
Net periodic benefit cost	$ 14.1	$ 1.3	$ 26.0	$ 15.8	$ 13.3	$ 16.5

In connection with regulatory orders, SCE&G recovers current pension expense through a rate rider that may be adjusted annually (for retail electric operations) or through cost of service rates (for gas operations). For retail electric operations, current pension expense is recognized based on amounts collected through its rate rider, and differences between actual pension expense and amounts recognized pursuant to the rider are deferred as a regulatory asset (for under-collections) or regulatory liability (for over-collections) as applicable. In addition, SCE&G amortizes certain previously deferred pension costs. See Note 2.

Other changes in plan assets and benefit obligations recognized in OCI (net of tax) were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2015	2014	2013	2015	2014	2013
Current year actuarial (gain) loss	$ 0.2	$ 0.2	$ (0.8)	$ (0.3)	$ 0.4	$ (0.4)
Amortization of actuarial losses	(0.1)	(0.1)	(0.1)	—	—	(0.1)
Amortization of prior service cost	(0.1)	(0.1)	—	—	—	—
Total recognized in OCI	$ —	$ —	$ (0.9)	$ (0.3)	$ 0.4	$ (0.5)

Other changes in plan assets and benefit obligations recognized in regulatory assets were as follows:

Millions of dollars	Pension Benefits 2015	Pension Benefits 2014	Pension Benefits 2013	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014	Other Postretirement Benefits 2013
Current year actuarial (gain) loss	$ 12.2	$ 87.7	$ (137.1)	$ (14.0)	$ 15.8	$ (24.4)
Amortization of actuarial losses	(10.4)	(3.5)	(12.7)	(1.5)	—	(2.2)
Amortization of prior service cost	(3.1)	(2.8)	(4.5)	(0.3)	(0.2)	(0.5)
Prior service cost (credit)	—	—	(7.7)	—	—	—
Amortization of transition obligation	—	—	—	—	—	(0.1)
Total recognized in regulatory assets	$ (1.3)	$ 81.4	$ (162.0)	$ (15.8)	$ 15.6	$ (27.2)

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits 2015	Pension Benefits 2014	Pension Benefits 2013	Other Postretirement Benefits 2015	Other Postretirement Benefits 2014	Other Postretirement Benefits 2013
Discount rate	4.20%	5.03%	4.10%/5.07%	4.30%	5.19%	4.19%
Expected return on plan assets	7.50%	8.00%	8.00%	n/a	n/a	n/a
Rate of compensation increase	3.00%	3.00%	3.75%/3.00%	3.00%	3.75%	3.75%
Health care cost trend rate	n/a	n/a	n/a	7.00%	7.40%	7.80%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2020

Net periodic benefit cost for the period through September 1, 2013, was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The actuarial loss and prior service cost to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2016 are insignificant.

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2016 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 11.2	$ 0.3
Prior service cost	3.0	0.2
Total	$ 14.2	$ 0.5

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

401(k) Retirement Savings Plan

SCE&G participates in a SCANA-sponsored defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. SCE&G provides 100% matching contributions up to 6% of an employee's eligible earnings. Total matching contributions made to the plan were $21.8 million in 2015, $20.7 million in 2014 and $18.7 million in 2013 and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

SCE&G participates in the LTECP which provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA's common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

The 2013-2015 and 2014-2016 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three-year performance cycle. The 2015-2017 award is based on performance over a single three-year cycle. In each performance cycle of the 2013-2015 and 2014-2016 awards, 20% of the performance awards were granted in the form of restricted share units, which are liability awards payable in cash and 80% of the awards were granted in performance shares each of which has a value that is equal to, and changes with, the value of a share of SCANA common stock. For the 2015-2017 awards, 30% are in the form of restricted share units and 70% are in the form of performance shares. Dividend equivalents are accrued on the performance shares and the restricted share units. Performance awards and related dividend equivalents are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to certain exceptions. Payouts of performance share awards are determined by SCANA's performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in GAAP-adjusted net earnings per share (weighted 50%).

Compensation cost of liability awards is recognized over their respective three-year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2013-2015 performance cycle were paid in cash totaling $3.7 million at SCANA's discretion in February 2016. Cash-settled liabilities related to earlier performance cycles totaled approximately $6.3 million in 2015, $1.9 million in 2014 and $3.2 million in 2013.

Fair value adjustments for all performance cycles resulted in compensation expense recognized in the statements of income totaling approximately $12.2 million in 2015, $12.6 million in 2014 and $5.5 million in 2013. Such fair value adjustments also resulted in capitalized compensation costs of $0.6 million in 2015, $0.6 million in 2014 and $0.5 million in 2013. At December 31, 2015 SCE&G's unrecognized compensation cost was insignificant.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.4 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million of coverage for accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $43.5 million.

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Consolidated SCE&G's results of operations, cash flows and financial position.

New Nuclear Construction

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's current ownership share in the New Units is 55%. As discussed below, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G’s related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G’s weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2015, SCE&G’s investment in the New Units, including related transmission, totaled \$3.6 billion, for which the financing costs on \$3.2 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In October 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule. Shield building construction remains a principal focus area for SCE&G’s oversight of the project. The primary critical path for both Unit 2 and Unit 3 runs through the placement of concrete within the containment vessels, the fabrication of shield building panels, the fabrication of the air inlet and tension rings and the completion of shield building construction. For Unit 3, the critical path also runs through the setting of CA20 which is a prerequisite to concrete placement in certain areas of the nuclear island. Plans to accelerate the work needed to permit placing this concrete are underway. In addition, WEC has reached agreement on a mitigation plan to accelerate shield building panel fabrication with one of its subcontractors. Additional mitigation will be required in critical path areas to support the updated substantial completion dates described below.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The result was a revised fully integrated project schedule with timing of specific construction activities (Revised, Fully-Integrated Construction Schedule) along with related cost information.

The Revised, Fully-Integrated Construction Schedule indicated that the substantial completion of Unit 2 was expected to occur in mid-June 2019 and that the substantial completion of Unit 3 was expected to be approximately 12 months later. The Consortium continues to refine and update the Revised, Fully-Integrated Construction Schedule as designs are finalized, as construction progresses, and as additional information is received.

In September 2015, the SCPSC approved an updated BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively, each subject to an 18-month contingency period. In addition, the SCPSC approved certain updated owner's costs (\$245 million) and other capital costs (\$453 million), of which \$539 million were associated with the schedule delays and other contested costs. In this proceeding, SCE&G's total projected capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) were estimated to be \$5.2 billion and \$6.8 billion, respectively. These projections included cost amounts related to the Revised, Fully-Integrated Construction Schedule for which SCE&G had not accepted responsibility and which were the subject of dispute. As such, these updated milestone schedule and projections did not reflect the resolution of negotiations. In addition, the SCPSC approved a revision to the allowed return on equity for new nuclear construction from 11.0% to 10.5%. This revised return on equity will be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2016, until such time as the New Units are completed.

On October 27, 2015, SCE&G, Santee Cooper and the Consortium reached a settlement regarding the above mentioned disputes, and the EPC Contract was amended. The October 2015 Amendment became effective in December 2015, upon the consummation of the acquisition by WEC of the stock of Stone & Webster from CB&I. Following that acquisition, Stone & Webster continues to be a member of the Consortium as a subsidiary of WEC rather than CB&I, and WEC has engaged Fluor Corporation as a subcontracted construction manager.

Among other things, the October 2015 Amendment:

(i) resolved by settlement and release substantially all outstanding disputes between SCE&G and the Consortium, in exchange for (a) an additional cost to be paid by SCE&G and Santee Cooper of $300 million (SCE&G’s 55% portion being $165 million) and an increase in the fixed component of the contract price by that amount, and (b) a credit to SCE&G and Santee Cooper of $50 million (SCE&G’s 55% portion being approximately $27 million) to be applied to the target component of the contract price,

(ii) revised the guaranteed substantial completion dates of Units 2 and 3 to August 31, 2019 and 2020, respectively,

(iii) revised the delay-related liquidated damages computation requirements, including those related to the eligibility of the New Units to earn Internal Revenue Code Section 45J production tax credits (see also below), and capped those aggregate liquidated damages at $463 million per New Unit (SCE&G’s 55% portion being approximately $255 million per New Unit),

(iv) provides for payment to the Consortium of a completion bonus of $275 million per New Unit (SCE&G’s 55% portion being approximately $151 million per New Unit) for each New Unit placed in service by the deadline to qualify for production tax credits,

(v) provides for development of a revised construction milestone payment schedule, with SCE&G and Santee Cooper making monthly payments of $100 million (SCE&G’s 55% portion being $55 million) for each of the first five months following effectiveness, followed by payments made based on milestones achieved, and

(vi) provided that SCE&G and Santee Cooper waive and cancel the CB&I parent company guaranty with respect to the project.

Under the October 2015 Amendment, SCE&G’s total estimated project costs increased by approximately $286 million over the $6.8 billion approved by the SCPSC in September 2015, bringing its total estimated gross construction cost of the project (including escalation and AFC) to approximately $7.1 billion.

The payment obligations under the EPC Contract are joint and several obligations of WEC and Stone & Webster, and in connection with the October 2015 Amendment, Toshiba Corporation, WEC’s parent company, reaffirmed its guaranty of WEC’s payment obligations. Based on Toshiba's current credit ratings and pursuant to the terms of the EPC Contract, SCE&G has exercised its rights to demand a payment and performance bond from WEC. Such bond will be based on estimated billings and its aggregate nominal coverage will not exceed $100 million (or $55 million for SCE&G's 55% share). SCE&G and Santee Cooper are responsible for the cost of the bond. In addition, the EPC Contract provides that upon the request of SCE&G, the Consortium must escrow certain intellectual property and software for SCE&G's benefit to enable completion of the New Units. SCE&G has made such a request to the Consortium.

In addition to the above, the October 2015 Amendment provided for an explicit definition of a Change in Law designed to reduce the likelihood of certain future commercial disputes, and the Consortium also acknowledged and agreed that the project scope includes providing New Units that meet the standards of the NRC approved Design Control Document Revision 19. The October 2015 Amendment also established a dispute resolution board process for certain commercial claims and disputes, including any dispute that might arise with respect to the development of the revised construction milestone payment schedule referred to above. The EPC Contract was also revised to eliminate the requirement or ability to bring suit before substantial completion of the project.

Finally, the October 2015 Amendment provides SCE&G and Santee Cooper an irrevocable option, until November 1, 2016 and subject to regulatory approvals, to further amend the EPC Contract to fix the total amount to be paid to the Consortium for its entire scope of work on the project (excluding a limited amount of work within the time and materials component of the contract price) after June 30, 2015 at $6.082 billion (SCE&G’s 55% portion being approximately $3.345 billion). This total amount to be paid would be subject to adjustment for amounts paid since June 30, 2015. Were this fixed price option to be exercised, the aggregate delay-related liquidated damages referred to in (iii) above would be capped at $338 million per unit (SCE&G's 55% portion being approximately $186 million per unit), and the completion bonus referred to in (iv) above would be $150 million per New Unit (SCE&G's 55% portion being approximately $83 million per New Unit). The exercise of this fixed price option would result in SCE&G's total estimated project costs increasing by approximately $774 million over the $6.8 billion approved by the SCPSC in September 2015, and would bring its total estimated gross construction cost (including escalation and AFC) of the project to approximately $7.6 billion.

Resolution of the disputes as described in (i) above, or in the case of the exercise of the fixed price option, would result in estimated project costs above the amounts approved by the SCPSC; however, the guaranteed substantial completion dates fall within the SCPSC approved 18-month contingency periods. SCE&G held an allowable ex parte communication briefing with the SCPSC on November 19, 2015 and, following an evaluation as to whether to exercise the fixed price option, expects to file a petition in 2016, as provided under the BLRA, for an update to the project's estimated capital cost and milestone schedule which would incorporate the impact of the October 2015 Amendment.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes through both the informal and formal procedures and currently anticipates that any costs that arise through such dispute resolution processes (including those reflected in the October 2015 Amendment described above), as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost, including its cost of financing, of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the October 2015 Amendment, which has not been approved by the SCPSC, SCE&G's currently projected cost would be approximately $750 million to $850 million for the additional 5% interest being acquired from Santee Cooper.

Nuclear Production Tax Credits

The IRS has notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. These nuclear production tax credits (related to SCE&G's 55% share of both New Units) could total as much as approximately $1.4 billion. Such credits would be earned over the first eight years of each New Unit's operations and would be realized by SCE&G over those years or during allowable carry-forward periods. Based on the guaranteed substantial completion dates provided above, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. When and to the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation. SCE&G prepared and submitted an overall integration plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

Environmental

Consolidated SCE&G's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on Consolidated SCE&G's financial condition, results of operations and cash flows. In addition, Consolidated SCE&G often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, Consolidated SCE&G expects to recover such expenditures and costs through existing ratemaking provisions.

From a regulatory perspective, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

On August 3, 2015, the EPA issued a revised standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The final rule requires all new coal-fired power plants to meet a carbon emission rate of 1,400 pounds carbon dioxide per MWh and new natural gas units to meet 1,000 pounds carbon dioxide per MWh. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without partial carbon capture and sequestration capabilities. Consolidated SCE&G is evaluating the final rule, but does not plan to construct new coal-fired units in the foreseeable future.

In addition, on August 3, 2015, the EPA issued its final rule on emission guidelines for states to follow in developing plans to address GHG emissions from existing units. The rule includes state-specific goals for reducing national carbon dioxide emissions by 32% from 2005 levels by 2030. The rule also provides for nuclear reactors under construction, such as the New Units, to count towards compliance and establishes a phased-in compliance approach beginning in 2022. The rule gives states from one to three years to issue SIPs, which will ultimately define the specific compliance methodology that will be applied to existing units in that state. It is expected that South Carolina will request a two-year extension (until September 2018). On February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. The order of the Supreme Court has no immediate impact on SCE&G and GENCO or their generation operations. Consolidated SCE&G is currently evaluating the rule and expects any costs incurred to comply with such rule to be recoverable through rates.

In July 2011, the EPA issued the CSAPR to reduce emissions of sulfur dioxide and nitrogen oxide from power plants in the eastern half of the United States. A series of court actions stayed this rule until October 23, 2014, when the Court of Appeals granted a motion to lift the stay. On December 3, 2014, the EPA published an interim final rule that aligns the dates in the CSAPR text with the revised court-ordered schedule, which delayed the implementation dates to 2015 for Phase 1 and to 2017 for Phase 2. The CSAPR replaces the CAIR and requires a total of 28 states to reduce annual sulfur dioxide emissions and annual or ozone season nitrogen oxide emissions to assist in attaining the ozone and fine particle NAAQS. The rule establishes an emissions cap for sulfur dioxide and nitrogen oxide and limits the trading for emission allowances by separating affected states into two groups with no trading between the groups. On July 28, 2015, the Court of Appeals held that Phase 2 emissions budgets for certain states, including South Carolina, required reductions in emissions beyond the point necessary to achieve downwind attainment and were, therefore, invalid. The Court of Appeals remanded CSAPR, without vacating the rule, to the EPA for further consideration. The opinion of the Court of Appeals has no immediate impact on SCE&G and GENCO or their generation operations. Air quality control installations that SCE&G and GENCO have already completed have positioned them to comply with the existing allowances set by the CSAPR. Any cost incurred to comply with CSAPR are expected to be recoverable through rates.

In April 2012, the EPA's MATS rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for generating facilities to meet the standards, and SCE&G and GENCO's evaluation of the rule is ongoing. SCE&G's decision to retire certain coal-fired units (see Note 2) and its project to build the New Units along with other actions are expected to result in the SCE&G's compliance with MATS.

On November 19, 2014, the EPA finalized its reconsideration of certain provisions applicable during startup and shutdown of generating facilities under the MATS rule. SCE&G and GENCO have received a one year extension (until April 2016) to comply with MATS at Cope, McMeekin, Wateree and Williams Stations. These extensions will allow time to convert McMeekin Station to burn natural gas and to install additional pollution control devices at the other plants that will enhance the control of certain MATS-regulated pollutants. On June 29, 2015, the U.S. Supreme Court ruled that the EPA unreasonably failed to consider costs in its decision to regulate, and remanded a case challenging the regulation on that basis to the Court of

Appeals. The Court noted during remand that EPA has said that it is on track to issue a revised "appropriate and necessary" finding by April 15, 2016. The ruling, however, is not expected to have an impact on SCE&G or GENCO due to the aforementioned retirements and conversions. SCE&G and GENCO currently are in compliance with the MATS rule and expect to remain in compliance.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility’s NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule became effective on January 4, 2016. After this date, state regulators will modify facility NPDES permits to match more restrictive standards, thus requiring facilities to retrofit with new wastewater treatment technologies. Compliance dates will vary by type of wastewater, and some will be based on a facility's five year permit cycle and thus may range from 2018 to 2023. Consolidated SCE&G expects that wastewater treatment technology retrofits will be required at Williams and Wateree Stations and may be required at other facilities. Any costs incurred to comply with the ELG Rule are expected to be recoverable through rates.

The CWA Section 316(b) Existing Facilities Rule became effective in October 2014. This rule establishes national requirements for the location, design, construction and capacity of cooling water intake structures at existing facilities that reflect the best technology available for minimizing the adverse environmental impacts of impingement and entrainment. SCE&G and GENCO are conducting studies and implementing plans to ensure compliance with this rule. In addition, Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones.

On April 17, 2015, the EPA's final rule for CCR was published in the Federal Register and became effective in the fourth quarter of 2015. This rule regulates CCR as a non-hazardous waste under Subtitle D of the Resource Conservation and Recovery Act and imposes certain requirements on ash storage ponds and other CCR management facilities at SCE&G's and GENCO's coal-fired generating facilities. Although the full effects of this rule are still being evaluated, SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds and have previously recognized AROs for such ash storage ponds under existing requirements. Consolidated SCE&G does not expect the incremental compliance costs associated with this rule to be significant and expects to recover such costs in future rates.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998, and it imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2015, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017 and has constructed a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. The state of South Carolina has similar laws. SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify SCE&G that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue until at least through 2017 and will cost an additional $18.5 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2015, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $34.8 million and are included in regulatory assets.

Claims and Litigation

Consolidated SCE&G is subject to various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on Consolidated SCE&G's results of operations, cash flows or financial condition.

Operating Lease Commitments

Consolidated SCE&G is obligated under various operating leases for rail cars, vehicles, office space, furniture and equipment. Leases expire at various dates through 2051. Rent expense totaled approximately $12.3 million in 2015, $12.1 million in 2014 and $13.6 million in 2013. Future minimum rental payments under such leases will be $4 million in 2016, $2 million in 2017, $1 million in 2018, $1 million in 2019, $1 million in 2020 and $17 million thereafter.

Asset Retirement Obligations

Consolidated SCE&G recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that result from their acquisition, construction, development and normal operation relate primarily to Consolidated SCE&G's regulated utility operations. As of December 31, 2015, Consolidated SCE&G has recorded AROs of approximately $176 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $312 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of AROs is as follows:

Millions of dollars	2015	2014
Beginning balance	$ 536	$ 547
Liabilities incurred	—	3
Liabilities settled	(16)	(6)
Accretion expense	23	25
Revisions in estimated cash flows	(55)	(33)
Ending Balance	$ 488	$ 536

In 2015, revisions in estimated cash flows primarily relate to changes in the expected timing of ARO settlements due to changes in the estimated useful lives of certain electric utility properties identified as part of a customary depreciation study. In 2014 such revisions primarily relate to lower estimates for certain environmental clean up obligations at generation facilities.

11. AFFILIATED TRANSACTIONS

Prior to January 31, 2015, CGT was a wholly-owned subsidiary of SCANA and transported natural gas to SCE&G to serve retail gas customers and certain electric generation requirements. SCE&G's purchases from CGT totaled approximately $3.4 million in 2015, $30.0 million in 2014 and $33.3 million in 2013. SCE&G's payables to CGT for transportation services were $3.3 million at December 31, 2014, and SCE&G's receivables from CGT related to such transportation services were $1.2 million at December 31, 2014.

SCE&G purchases natural gas and related pipeline capacity from SEMI to serve its retail gas customers and certain electric generation requirements. Such purchases totaled approximately $128.5 million in 2015, $195.7 million in 2014 and $166.9 million in 2013. SCE&G's payables to SEMI for such purchases were $7.5 million and $12.6 million as of December 31, 2015 and 2014, respectively.

SCE&G owns 40% of Canadys Refined Coal, LLC which is involved in the manufacturing and sale of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G's total purchases from this affiliate were $233.2 million in 2015, $260.3 million in 2014 and $134.2 million in 2013. SCE&G's total sales to this affiliate were

$232.0 million in 2015, $259.0 million in 2014 and $133.6 million in 2013. SCE&G's payable to this affiliate was $12.9 million at December 31, 2015 and $27.9 million at December 31, 2014 SCE&G's receivable from this affiliate was $12.8 million at December 31, 2015 and $27.8 million at December 31, 2014.

SCANA Services, for itself and its parent company, provides the following services to Consolidated SCE&G, which are rendered at direct or allocated cost: information systems services, telecommunications services, customer services, marketing and sales, human resources, corporate compliance, purchasing, financial services, risk management, public affairs, legal services, investor relations, gas supply and capacity management, strategic planning, general administrative services and retirement benefits. In addition, SCANA Services processes and pays invoices for Consolidated SCE&G and is reimbursed. Costs for these services totaled $300.0 million in 2015, $292.2 million in 2014 and $285.6 million in 2013. Consolidated SCE&G's payables to SCANA Services for these services were $57.0 million and $47.3 million at December 31, 2015 and 2014, respectively.

Borrowings from and investments in an affiliated money pool are described in Note 4. SCE&G's participation in SCANA's noncontributory defined benefit pension plan and unfunded postretirement health care and life insurance programs are described in Note 8.

12. SEGMENT OF BUSINESS INFORMATION

Consolidated SCE&G's reportable segments follow the same accounting policies as those described in Note 1 and reflect the effect of certain reclassifications described therein.

Electric Operations primarily generates, transmits, and distributes electricity, and is regulated by the SCPSC and FERC. Gas Distribution purchases and sells natural gas, primarily at retail, and is regulated by the SCPSC.

Management uses operating income to measure segment profitability for regulated operations and evaluates utility plant, net, for its segments. As a result, Consolidated SCE&G does not allocate interest charges, income tax expense, earnings available to common shareholder or assets other than utility plant to its segments. Intersegment revenue and interest income were not significant. Consolidated SCE&G's deferred tax assets are netted with deferred tax liabilities for reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the reportable segments. Revenues from non-reportable segments are included in Other Income. Segment Assets include utility plant, net for all reportable segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for the segments. Adjustments to Interest Expense and Deferred Tax Assets include amounts that are not allocated to the segments. Expenditures for Assets are adjusted for revisions to estimated cash flows related to AROs, and totals not allocated to other segments.

Disclosure of Reportable Segments (Millions of dollars)

	Electric Operations	Gas Distribution	Adjustments/ Eliminations	Consolidated Total
2015				
External Revenue	$ 2,557	$ 373	—	$ 2,930
Operating Income	876	58	—	934
Interest Expense	17	—	$ 231	248
Depreciation and Amortization	277	28	(11)	294
Segment Assets	10,883	757	3,125	14,765
Expenditures for Assets	1,087	57	(136)	1,008
Deferred Tax Assets	5	n/a	(5)	—
2014				
External Revenue	$ 2,629	$ 462	—	$ 3,091
Operating Income	768	62	—	830
Interest Expense	19	—	$ 209	228
Depreciation and Amortization	300	27	(12)	315
Segment Assets	10,182	721	3,175	14,078
Expenditures for Assets	936	55	(57)	934
Deferred Tax Assets	11	n/a	(11)	—
2013				
External Revenue	$ 2,431	$ 414	—	$ 2,845
Operating Income	679	58	—	737
Interest Expense	19	—	$ 198	217
Depreciation and Amortization	294	26	(7)	313
Segment Assets	9,488	686	2,499	12,673
Expenditures for Assets	907	45	51	1,003

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not Applicable.

ITEM 9A. CONTROLS AND PROCEDURES

SCANA:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2015, SCANA conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of the effectiveness of the design and operation of SCANA’s disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934). Based on this evaluation, the CEO and CFO concluded that, as of December 31, 2015, SCANA's disclosure controls and procedures were effective.

Management’s Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2015, SCANA conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of any change in SCANA's internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934) during the quarter ended December 31, 2015. There has been no change in SCANA’s internal controls over financial reporting during the quarter ended December 31, 2015 that has materially affected or is reasonably likely to materially affect SCANA’s internal control over financial reporting.

The Management Report on Internal Control over Financial Reporting follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCANA is responsible for establishing and maintaining adequate internal control over financial reporting. SCANA’s internal control system was designed by or under the supervision of SCANA’s management, including its CEO and CFO, to provide reasonable assurance to SCANA’s management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCANA’s management assessed the effectiveness of SCANA’s internal control over financial reporting as of December 31, 2015. In making this assessment, SCANA used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control—Integrated Framework (2013)*. Based on this assessment, SCANA’s management believes that, as of December 31, 2015, internal control over financial reporting is effective based on those criteria.

SCANA’s independent registered public accounting firm has issued an attestation report on SCANA’s internal control over financial reporting. This report follows.

ATTESTATION REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the internal control over financial reporting of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2015, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2015, based on the criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2015, of the Company and our report dated February 26, 2016, expressed an unqualified opinion on those financial statements and financial statement schedule.

/s/DELOITTE & TOUCHE LLP
Charlotte, North Carolina
February 26, 2016

SCE&G:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2015, SCE&G conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of the effectiveness of the design and operation of SCE&G’s disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934). Based on this evaluation, the CEO and CFO concluded that, as of December 31, 2015, SCE&G's disclosure controls and procedures were effective.

Management’s Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2015, SCE&G conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of any change in SCE&G's internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934) during the quarter ended December 31, 2015. There has been no change in SCE&G’s internal controls over financial reporting during the quarter ended December 31, 2015 that has materially affected or is reasonably likely to materially affect SCE&G’s internal control over financial reporting.

The Management Report on Internal Control over Financial Reporting follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCE&G is responsible for establishing and maintaining adequate internal control over financial reporting. SCE&G’s internal control system was designed by or under the supervision of SCE&G’s management, including its CEO and CFO, to provide reasonable assurance to SCE&G’s management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCE&G’s management assessed the effectiveness of SCE&G’s internal control over financial reporting as of December 31, 2015. In making this assessment, SCE&G used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control-Integrated Framework (2013).* Based on this assessment, SCE&G’s management believes that, as of December 31, 2015, internal control over financial reporting is effective based on those criteria.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

SCANA: A list of SCANA's executive officers is in Part I of this annual report at page 23. The other information required by ITEM 10 is incorporated herein by reference to the captions "INFORMATION ABOUT EXPERIENCE AND QUALIFICATION OF DIRECTORS AND NOMINEES," "NOMINEES FOR DIRECTORS," "CONTINUING DIRECTORS," "BOARD MEETINGS-COMMITTEES OF THE BOARD", "GOVERNANCE INFORMATION-SCANA's Code of Conduct & Ethics" and "OTHER INFORMATION-Section 16(a) Beneficial Ownership Reporting Compliance" in SCANA's definitive proxy statement for the 2016 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 11. EXECUTIVE COMPENSATION

SCANA: The information required by ITEM 11 is incorporated herein by reference to the captions "Compensation Committee Interlocks and Insider Participation," "Compensation Discussion and Analysis," Compensation Committee Report," "Summary Compensation Table," "2015 Grants of Plan-Based Awards," "Outstanding Equity Awards at 2015 Fiscal Year-End," "2015 Option Exercises and Stock Vested," "Pension Benefits," "2015 Nonqualified Deferred Compensation," and "Potential Payments Upon Termination or Change in Control," under the heading "EXECUTIVE COMPENSATION" and the heading "DIRECTOR COMPENSATION" in SCANA's definitive proxy statement for the 2016 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

SCANA: Information required by ITEM 12 is incorporated herein by reference to the caption "SHARE OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT" in SCANA's definitive proxy statement for the 2016 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

Equity securities issuable under SCANA's compensation plans at December 31, 2015 are summarized as follows:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights		Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
	(a)		(b)	(c)
Equity compensation plans approved by security holders:				
2015 Long-Term Equity Compensation Plan	157,316	(1)	n/a	4,842,684
Prior Long-Term Equity Compensation Plan	493,611	(2)	n/a	—
Non-Employee Director Compensation Plan	n/a		n/a	49,913
Equity compensation plans not approved by security holders	n/a		n/a	n/a
Total	650,927		n/a	4,892,597

(1) Represents unearned non-vested performance share awards from the 2015-2017 performance period assuming a target level payout.
(2) Represents earned non-vested performance share awards from the 2014-2016 performance period at achieved levels and unearned non-vested performance share awards from the 2014-2016 performance period assuming a target level payout. Also includes 226,902 performance shares related to vested grants from the 2013-2015 performance period which were settled in cash rather than shares in February 2016. The remaining award amount of 266,709 will be 128,132 higher if maximum level payout is earned for the 2014-2016 performance period.

SCE&G: Not applicable.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

SCANA: The information required by ITEM 13 is incorporated herein by reference to the captions “RELATED PARTY TRANSACTIONS” and “GOVERNANCE INFORMATION - Director Independence” in SCANA’s definitive proxy statement for the 2016 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA’s fiscal year.

SCE&G: Not applicable.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

SCANA: The information required by ITEM 14 is incorporated herein by reference to “PROPOSAL 2-APPROVAL OF THE APPOINTMENT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM” in SCANA’s definitive proxy statement for the 2016 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities and Exchange Act of 1934 within 120 days after the end of SCANA’s fiscal year.

SCE&G: The Audit Committee Charter requires the Audit Committee to pre-approve all auditing services and permitted non-audit services (including the fees and terms thereof) to be performed by the independent registered accounting firm. Pursuant to a policy adopted by the Audit Committee, its Chairman may pre-approve the rendering of services on behalf of the Audit Committee. Decisions by the Chairman to pre-approve the rendering of services are presented to the Audit Committee at its next scheduled meeting.

Independent Registered Public Accounting Firm’s Fees

The following table sets forth the aggregate fees, all of which were approved by the Audit Committee, charged to SCE&G and its consolidated affiliates for the fiscal years ended December 31, 2015 and 2014 by Deloitte & Touche LLP, the member firms of Deloitte Touche Tohmatsu, and their respective affiliates.

	2015	2014
Audit Fees (1)	$ 2,032,222	$ 1,977,658
Audit-Related Fees (2)	114,832	123,107
Total Fees	$ 2,147,054	$ 2,100,765

(1) Fees for audit services billed in 2015 and 2014 consisted of audits of annual financial statements, comfort letters, statutory and regulatory audits, consents and other services related to SEC filings, and accounting research.

(2) Fees primarily for employee benefit plan audits.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(a) The following documents are filed or furnished as a part of this Form 10-K:

(1) Financial Statements and Schedules:

The Report of Independent Registered Public Accounting Firm on the financial statements for each of SCANA and SCE&G is listed under ITEM 8 herein.

The financial statements and supplementary financial data filed as part of this report for SCANA and SCE&G are listed under ITEM 8 herein.

The financial statement schedules "Schedule II - Valuation and Qualifying Accounts" filed as part of this report for SCANA and SCE&G are included below.

(2) Exhibits

Exhibits required to be filed or furnished with this Annual Report on Form 10-K are listed in the Exhibit Index following the signature page. Certain of such exhibits which have heretofore been filed with the SEC and which are designated by reference to their exhibit number in prior filings are incorporated herein by reference and made a part hereof.

Pursuant to Rule 15d-21 promulgated under the Securities Exchange Act of 1934, the annual report for SCANA’s employee stock purchase plan will be furnished under cover of Form 11-K to the SEC when the information becomes available.

As permitted under Item 601(b)(4)(iii) of Regulation S-K, instruments defining the rights of holders of long-term debt of less than 10% of the total consolidated assets of SCANA, for itself and its subsidiaries and of SCE&G, for itself and its consolidated affiliates, have been omitted and SCANA and SCE&G agree to furnish a copy of such instruments to the SEC upon request.

Schedule II—Valuation and Qualifying Accounts
(in millions)

Description	Beginning Balance	Additions: Charged to Income	Additions: Charged to Other Accounts	Deductions from Reserves	Ending Balance
SCANA:

POWER OF ATTORNEY

KNOW ALL MEN BY THESE PRESENTS, that each of the undersigned, being a director or officer of SCANA Corporation ("SCANA"), hereby constitutes and appoints Kevin B. Marsh, Jimmy E. Addison and Ronald T. Lindsay, and each of them, his or her true and lawful attorney-in-fact and agent, with full power of substitution and resubstitution, for him or her and in his or her name, place and stead in any and all capacities, to sign an Annual Report for SCANA's fiscal year ended December 31, 2015, on Form 10-K under the Securities Exchange Act of 1934, as amended, or such other form as any such attorney-in-fact may deem necessary or desirable, and any amendments to the foregoing (collectively, the "Annual Report"), each in such form as they or any one of them may approve, and to file the same with all exhibits thereto and other documents in connection therewith with the Securities and Exchange Commission, granting unto said attorneys-in-fact and agents, and each of them, full power and authority to do and perform each and every act and thing requisite and necessary to be done so that such Annual Report shall comply with the Securities Exchange Act of 1934, as amended, and the applicable rules and regulations adopted or issued pursuant thereto, as fully and to all intents and purposes as he or she might or could do in person, hereby ratifying and confirming all that said attorneys-in-fact and agents, or any of them or their substitute or resubstitute, may lawfully do or cause to be done by virtue hereof.

IN WITNESS WHEREOF, each of the undersigned has hereunto set his or her hand this 18th day of February 2016.

KNOW ALL MEN BY THESE PRESENTS, that each of the undersigned, being a director or officer of South Carolina Electric & Gas Company ("SCE&G"), hereby constitutes and appoints Kevin B. Marsh, Jimmy E. Addison and Ronald T. Lindsay, and each of them, his or her true and lawful attorney-in-fact and agent, with full power of substitution and resubstitution, for him or her and in his or her name, place and stead in any and all capacities, to sign an Annual Report for SCE&G's fiscal year ended December 31, 2015, on Form 10-K under the Securities Exchange Act of 1934, as amended, or such other form as any such attorney-in-fact may deem necessary or desirable, and any amendments to the foregoing (collectively, the "Annual Report"), each in such form as they or any one of them may approve, and to file the same with all exhibits thereto and other documents in connection therewith with the Securities and Exchange Commission, granting unto said attorneys-in-fact and agents, and each of them, full power and authority to do and perform each and every act and thing requisite and necessary to be done so that such Annual Report shall comply with the Securities Exchange Act of 1934, as amended, and the applicable rules and regulations adopted or issued pursuant thereto, as fully and to all intents and purposes as he or she might or could do in person, hereby ratifying and confirming all that said attorneys-in-fact and agents, or any of them or their substitute or resubstitute, may lawfully do or cause to be done by virtue hereof.

IN WITNESS WHEREOF, each of the undersigned has hereunto set his or her hand this 18th day of February 2016.

CERTIFICATION

I, Kevin B. Marsh, certify that:

1. I have reviewed this annual report on Form 10-K of SCANA Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

SCANA Corporation Yes ☐ No ☒ South Carolina Electric & Gas Company Yes ☐ No ☒

The aggregate market value of voting stock held by non-affiliates of SCANA Corporation was $6.85 billion at June 28, 2013, the last business day of the registrant's most recently completed second fiscal quarter, based on the closing price of $49.10 per share. South Carolina Electric & Gas Company is a wholly -owned subsidiary of SCANA Corporation and has no voting stock other than its common stock, all of which is held beneficially and of record by SCANA Corporation. A description of registrants' common stock follows:

Registrant	Description of Common Stock	Shares Outstanding at February 20, 2014
SCANA Corporation	Without Par Value	141,144,841
South Carolina Electric & Gas Company	Without Par Value	40,296,147

Documents incorporated by reference: Specified sections of SCANA Corporation's Proxy Statement, in connection with its 2014 Annual Meeting of Shareholders, are incorporated by reference in Part III hereof.

This combined Form 10-K is separately filed by SCANA Corporation and South Carolina Electric & Gas Company. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. Each registrant makes no representation as to information relating to the other company.

South Carolina Electric & Gas Company meets the conditions set forth in General Instruction I(1) (a) and (b) of Form 10-K and therefore is filing this Form with the reduced disclosure format allowed under General Instruction I(2).

TABLE OF CONTENTS

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Statements included in this Annual Report on Form 10-K which are not statements of historical fact are intended to be, and are hereby identified as, "forward-looking statements" for purposes of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements include, but are not limited to, statements concerning key earnings drivers, customer growth, environmental regulations and expenditures, leverage ratio, projections for pension fund contributions, financing activities, access to sources of capital, impacts of the adoption of new accounting rules and estimated construction and other expenditures. In some cases, forward-looking statements can be identified by terminology such as "may," "will," "could," "should," "expects," "forecasts," "plans," "anticipates," "believes," "estimates," "projects," "predicts," "potential" or "continue" or the negative of these terms or other similar terminology. Readers are cautioned that any such forward-looking statements are not guarantees of future performance and involve a number of risks and uncertainties, and that actual results could differ materially from those indicated by such forward-looking statements. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, but are not limited to, the following:

(1) the information is of a preliminary nature and may be subject to further and/or continuing review and adjustment;

(2) regulatory actions, particularly changes in rate regulation, regulations governing electric grid reliability and pipeline integrity, environmental regulations, and actions affecting the construction of new nuclear units;

(3) current and future litigation;

(4) changes in the economy, especially in areas served by subsidiaries of SCANA;

(5) the impact of competition from other energy suppliers, including competition from alternate fuels in industrial markets;

(6) the impact of conservation and demand side management efforts and/or technological advances on customer usage;

(7) the loss of sales to distributed generation, such as solar photovoltaic systems;

(8) growth opportunities for SCANA's regulated and diversified subsidiaries;

(9) the results of short- and long-term financing efforts, including prospects for obtaining access to capital markets and other sources of liquidity;

(10) the effects of weather, especially in areas where the generation and transmission facilities of SCANA and its subsidiaries (the Company) are located and in areas served by SCANA's subsidiaries;

(11) changes in SCANA's or its subsidiaries' accounting rules and accounting policies;

(12) payment and performance by counterparties and customers as contracted and when due;

(13) the results of efforts to license, site, construct and finance facilities for electric generation and transmission;

(14) maintaining creditworthy joint owners for SCE&G's new nuclear generation project;

(15) the ability of suppliers, both domestic and international, to timely provide the labor, secure processes, components, parts, tools, equipment and other supplies needed, at agreed upon prices, for our construction program, operations and maintenance;

(16) the results of efforts to ensure the physical and cyber security of key assets and processes;

(17) the availability of fuels such as coal, natural gas and enriched uranium used to produce electricity; the availability of purchased power and natural gas for distribution; the level and volatility of future market prices for such fuels and purchased power; and the ability to recover the costs for such fuels and purchased power;

(18) the availability of skilled and experienced human resources to properly manage, operate, and grow the Company's businesses;

(19) labor disputes;

(20) performance of SCANA's pension plan assets;

(21) changes in taxes;

(22) inflation or deflation;

(23) compliance with regulations;

(24) natural disasters and man-made mishaps that directly affect our operations or the regulations governing them; and

(25) the other risks and uncertainties described from time to time in the periodic reports filed by SCANA or SCE&G with the SEC.

SCANA and SCE&G disclaim any obligation to update any forward-looking statements.

DEFINITIONS

Abbreviations used in this Form 10-K have the meanings set forth below unless the context requires otherwise:

TERM	MEANING
AFC	Allowance for Funds Used During Construction

Williams Station	A.M. Williams Generating Station, owned by GENCO
WNA	Weather Normalization Adjustment

PART I

ITEM 1. BUSINESS

CORPORATE STRUCTURE AND ORGANIZATION

SCANA is a South Carolina corporation created in 1984 as a holding company. SCANA holds directly all of the capital stock of the following subsidiaries, each of which is incorporated in South Carolina.

SCE&G	Engaged in the generation, transmission, distribution and sale of electricity to retail and wholesale customers and the purchase, sale and transportation of natural gas to retail customers
GENCO	Owns Williams Station and sells electricity solely to SCE&G
Fuel Company	Acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission allowances
PSNC Energy	Purchases, sells and transports natural gas to retail customers
CGT	Transports natural gas in South Carolina and southeastern Georgia
SCI	Provides fiber optic communications, ethernet services and data center facilities and builds, manages and leases communications towers in South Carolina, North Carolina and Georgia
SEMI	Markets natural gas, primarily in the Southeast, and provides energy-related risk management services. SCANA Energy, a division of SEMI, markets natural gas in Georgia's retail market.
ServiceCare, Inc.	Provides service contracts on home appliances and heating and air conditioning units
SCANA Services, Inc.	Provides administrative, management and other services to SCANA's subsidiaries and business units

SCANA owns one other energy-related company that is insignificant and being liquidated.

SCANA and its subsidiaries had full-time, permanent employees as of February 20, 2014 and 2013 of 5,989 and 5,842, respectively.

INVESTOR INFORMATION

SCANA's and SCE&G's annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed with or furnished to the SEC are available free of charge through SCANA's internet website at *www.scana.com* (which is not intended as an active hyperlink) as soon as reasonably practicable after these reports are filed or furnished. Information on SCANA's website is not part of this or any other report filed with or furnished to the SEC.

SCANA and SCE&G post information from time to time regarding developments relating to SCE&G's new nuclear project on SCANA's website at www.scana.com (which is not intended to be an active hyperlink; the information on SCANA's website is not a part of this report or any other report or document that SCANA or SCE&G files with or furnishes to the SEC). On SCANA's homepage, there is a yellow box containing a link to the New Nuclear Development section of the website. That section in turn contains a yellow box with a link to recent project news and updates. Some of the information that will be posted from time to time, including the quarterly reports that SCE&G submits to the SCPSC and the ORS in connection with the new nuclear project, may be deemed to be material information that has not otherwise become public, and investors, media and others interested in SCE&G's new nuclear project are encouraged to review this information.

SEGMENTS OF BUSINESS

For information with respect to major segments of business, see Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G and the consolidated financial statements for SCANA and SCE&G (Note 12). All such information is incorporated herein by reference.

SCANA does not directly own or operate any significant physical properties. SCANA, through its subsidiaries, is engaged in the functionally distinct operations described below.

Regulated Utilities

SCE&G is engaged in the generation, transmission, distribution and sale of electricity to approximately 678,000 customers and the purchase, sale and transportation of natural gas to approximately 329,000 customers (each as of December 31, 2013). SCE&G's business experiences seasonal fluctuations, with generally higher sales of electricity during the summer and winter months because of air conditioning and heating requirements, and generally higher sales of natural gas during the winter months due to heating requirements. SCE&G's electric service territory extends into 24 counties covering nearly 17,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 35 counties in South Carolina and covers approximately 22,600 square miles. More than 3.2 million persons live in the counties where SCE&G conducts its business. Resale customers include municipalities, electric cooperatives, other investor-owned utilities, registered marketers and federal and state electric agencies. Predominant industries served by SCE&G include chemicals, educational services, paper products, food products, lumber and wood products, health services, textile manufacturing, rubber and miscellaneous plastic products and fabricated metal products.

PSNC Energy purchases, sells and transports natural gas to approximately 509,000 residential, commercial and industrial customers (as of December 31, 2013). PSNC Energy serves 28 franchised counties covering 12,000 square miles in North Carolina. The predominant industries served by PSNC Energy include educational services, food products, health services, automotive, chemicals, non-woven textiles, electrical generation and construction.

CGT operates as an open access, transportation-only interstate pipeline company regulated by FERC. CGT operates in southeastern Georgia and in South Carolina and has interconnections with Southern Natural at Port Wentworth, Georgia and with Southern LNG, Inc. at Elba Island, near Savannah, Georgia. CGT also has interconnections with Southern Natural in Aiken County, South Carolina, and with Transco in Cherokee and Spartanburg counties, South Carolina. CGT's customers include SCE&G (which uses natural gas for electricity generation and for gas distribution to retail customers), SEMI (which markets natural gas to industrial and sale for resale customers, primarily in the Southeast), municipalities, county gas authorities, federal and state agencies, marketers, power generators and industrial customers primarily engaged in the manufacturing or processing of ceramics, paper, metal, and textiles.

Nonregulated Businesses

SEMI markets natural gas primarily in the southeast and provides energy-related risk management services. SCANA Energy, a division of SEMI, sells natural gas to approximately 454,000 customers (as of December 31, 2013, and includes approximately 68,000 customers in its regulated division) in Georgia's natural gas market. In third quarter 2013, SCANA Energy's contract to serve as Georgia's regulated provider of natural gas was renewed by the GPSC through August 31, 2015. SCANA Energy's total customer base represents an approximately 30% share of the approximately 1.5 million customers in Georgia's deregulated natural gas market. SCANA Energy remains the second largest natural gas marketer in Georgia.

SCI owns and operates a 1,125 mile fiber optic telecommunications network and ethernet network and data center facilities in South Carolina. Through a joint venture, SCI has an interest in an additional 2,280 miles of fiber in South Carolina, North Carolina and Georgia. SCI also provides tower site construction, management and rental services and sells towers in South Carolina and North Carolina. SCI leases fiber optic capacity, data center space and tower space to certain affiliates at market rates.

The preceding Corporate Structure and Organization section describes other regulated and nonregulated businesses owned by SCANA.

COMPETITION

For a discussion of the impact of competition, see the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

CAPITAL REQUIREMENTS

SCANA's regulated subsidiaries, including SCE&G, require cash to fund operations, construction programs and dividend payments to SCANA. SCANA's nonregulated subsidiaries require cash to fund operations and dividend payments to SCANA. To replace existing plant investment and to expand to meet future demand for electricity and gas, SCANA's regulated subsidiaries must attract the necessary financial capital on reasonable terms. Regulated subsidiaries recover the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and these subsidiaries continue their construction programs, rate increases will be sought.

The future financial position and results of operations of the regulated subsidiaries will be affected by their ability to obtain adequate and timely rate and other regulatory relief, when requested.

For a discussion of various rate matters and their impact on capital requirements, see the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G and Note 2 to the consolidated financial statements for SCANA and SCE&G.

During the period 2014-2016, SCANA and SCE&G expect to meet capital requirements through internally generated funds, issuance of equity and short-term and long-term borrowings. SCANA and SCE&G expect that they have or can obtain adequate sources of financing to meet their projected cash requirements for the next 12 months and for the foreseeable future.

For a discussion of cash requirements for construction and nuclear fuel expenditures, contractual cash obligations, financing limits, financing transactions and other related information, see the Liquidity and Capital Resources section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

Ratios of earnings to fixed charges for each of the five years ended December 31, 2013, were as follows:

December 31,	2013	2012	2011	2010	2009
SCANA	3.22	2.93	2.87	2.92	2.84
SCE&G	3.48	3.29	3.13	3.18	3.25

ELECTRIC OPERATIONS

Electric Sales

SCE&G's sales of electricity and margins earned from the sale of electricity by customer classification as percentages of electric revenues for 2012 and 2013 were as follows:

	Sales		Margins	
Customer Classification	**2012**	**2013**	**2012**	**2013**
Residential	43%	44%	50%	50%
Commercial	32%	33%	33%	33%
Industrial	17%	18%	13%	14%
Sales for resale	6%	2%	2%	1%
Other	2%	3%	2%	2%
Total	100%	100%	100%	100%

Sales for resale include sales to three municipalities and one electric cooperative. Short-term system sales were not significant for any period presented.

During 2013 SCE&G experienced a net increase of approximately 8,000 electric customers (growth rate of 1.2%), increasing its total electric customers to approximately 678,000 at year end.

For the period 2014-2016, SCE&G projects total territorial kWh sales of electricity to increase 0.6% annually (assuming normal weather), total retail sales growth of 0.6% annually (assuming normal weather), total electric customer base to increase 1.8% annually and territorial peak load (summer, in MW) to increase 1.9% annually. SCE&G projects a retail kWh sales decrease of approximately 0.2% and customer growth of 1.1% from 2013 to 2014. SCE&G's goal is to maintain a planning reserve margin of between 14% and 20%, however, weather and other factors affect territorial peak load and can cause actual generating capacity on any given day to fall below the reserve margin goal.

Electric Interconnections

SCE&G purchases all of the electric generation of GENCO's Williams Station under a Unit Power Sales Agreement which has been approved by FERC. Williams Station has a net generating capacity (summer rating) of 605 MW.

SCE&G's transmission system, which extends over a large part of the central, southern and southwestern portions of South Carolina, interconnects with Duke Energy Carolinas, LLC, Duke Energy Progress, Inc., Santee Cooper, Georgia Power Company and the Southeastern Power Administration's Clarks Hill (Thurmond) Project. SCE&G is a member of VACAR, one of several geographic divisions within the SERC. SERC is one of eight regional entities with delegated authority from NERC for the purpose of proposing and enforcing reliability standards approved by FERC. SERC is divided geographically into five diverse sub-regions that are identified as Central, Delta, Gateway, Southeastern and VACAR. The regional entities and all members of NERC work to safeguard the reliability of the bulk power systems throughout North America. For a discussion of the impact certain legislative and regulatory initiatives may have on SCE&G's transmission system, see Electric Operations within the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

Fuel Costs and Fuel Supply

The average cost of various fuels and the weighted average cost of all fuels (including oil) for the years 2011-2013 follow:

	Cost of Fuel Used		
	2011	2012	2013
Per MMBTU:			
Nuclear	$ 0.88	$ 0.94	$ 1.11
Coal	4.47	4.49	4.28
Natural Gas	4.86	3.71	4.63
All Fuels (weighted average)	3.80	3.56	3.53
Per Ton: Coal	109.91	111.72	104.63
Per MCF: Gas	5.01	3.80	4.69

The sources and percentages of total MWh generation by each category of fuel for the years 2011-2013 and the estimates for the years 2014-2016 follow:

	% of Total MWh Generated					
	Actual			Estimated		
	2011	2012	2013	2014	2015	2016
Coal	50%	50%	45%	50%	49%	45%
Nuclear	19%	19%	24%	21%	21%	24%
Hydro	3%	3%	4%	4%	4%	4%
Natural Gas & Oil	28%	28%	26%	24%	25%	26%
Biomass	—	—	1%	1%	1%	1%
Total	100%	100%	100%	100%	100%	100%

In 2013, the Company used coal to generate electricity at six fossil fuel-fired plants, including its cogeneration facility located in Charleston, South Carolina. Unit trains and, in some cases, trucks and barges delivered coal to these plants. SCE&G completed the retirement of one of these plants (comprised of three units) in 2012 and 2013 and intends to retire certain other coal-fired generating units by 2018, subject to future developments in environmental regulations, among other matters. One of the units to be retired by 2018 was fueled with coal prior to 2013, but is expected to be fueled exclusively with natural gas until its retirement.

Coal is primarily obtained through long-term supply contracts. Long-term contracts exist with suppliers located in eastern Kentucky, Tennessee and West Virginia. These contracts provide for approximately 2.8 million tons annually. Sulfur restrictions on the contract coal range from 1.0% to 1.6%. These contracts expire at various times through 2016. Spot market purchases may occur when needed or when prices are believed to be favorable.

SCANA and SCE&G believe that SCE&G's operations comply with all applicable regulations relating to the discharge of sulfur dioxide and nitrogen oxide. See additional discussion at Environmental Matters in Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G, for itself and as agent for Santee Cooper, and Westinghouse are parties to a fuel alliance agreement and contracts for fuel fabrication and related services. Under these contracts, SCE&G has to supply enriched product to Westinghouse and Westinghouse will supply nuclear fuel assemblies for Summer Station Unit 1 and the New Units. Westinghouse will be SCE&G's exclusive provider of such fuel assemblies on a cost-plus basis. The fuel assemblies to be delivered under the contracts are expected to supply the nuclear fuel requirements of Summer Station Unit 1 and the New Units through 2033. SCE&G is dependent upon Westinghouse for providing fuel assemblies for the new AP1000 reactors in the New Units in the current and anticipated future absence of other commercially viable sources.

The Consortium currently provides maintenance and engineering support to Summer Station Unit 1 under a services alliance agreement. Although SCE&G has provided the Consortium with notice of its election to terminate the existing agreement, it is anticipated that SCE&G will enter into new agreements to provide similar support services to Summer Station Unit 1 and to the New Units upon their completion and commencement of commercial operation. Those new agreements may, but will not necessarily, be between SCE&G and the Consortium.

In addition, SCE&G has contracts covering its nuclear fuel needs for uranium, conversion services and enrichment services. These contracts have varying expiration dates through 2024. SCE&G believes that it will be able to renew contracts as they expire or enter into similar contractual arrangements with other suppliers of nuclear fuel materials and services and that sufficient capacity for nuclear fuel supplies and processing exists to preclude the impairment of normal operations of its nuclear generating units.

SCE&G can store spent nuclear fuel on-site until at least 2017 and has commenced construction of a dry cask storage facility to accommodate the spent fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available. In addition, Summer Station Unit 1 has sufficient on-site storage capacity to permit storage of the entire reactor core in the event that complete unloading should become desirable or necessary. For information about the contract with the DOE regarding disposal of spent fuel, see *Hazardous and Solid Wastes* within the Environmental Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

GAS OPERATIONS

Gas Sales-Regulated

Regulated sales of natural gas by customer classification as a percent of total regulated gas revenues sold or transported for 2012 and 2013 were as follows:

	SCANA		**SCE&G**	
Customer Classification	**2012**	**2013**	**2012**	**2013**
Residential	54.7%	55.6%	44.3%	43.5%
Commercial	26.1%	26.0%	27.5%	27.4%
Industrial	11.8%	12.5%	22.3%	25.6%
Transportation Gas	7.4%	5.9%	5.9%	3.5%
Total	100.0%	100.0%	100.0%	100.0%

For the three-year period 2014-2016, SCANA projects total consolidated sales of regulated natural gas in MMBTUs to increase 1.4% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.1%, commercial of 0.8% and industrial of 0.8%.

For the three-year period 2014-2016, SCE&G projects total consolidated sales of regulated natural gas in MMBTUs to increase 0.8% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 1.0%, commercial of 0.6% and industrial of 1.0%.

For the three-year period 2014-2016, SCANA's and SCE&G's total consolidated regulated natural gas customer base is projected to increase annually 2.3% and 1.9%, respectively. During 2013 SCANA recorded a net increase of approximately 18,000 regulated gas customers (growth rate of 2.2%), increasing its regulated gas customers to approximately 837,000. Of this increase, SCE&G recorded a net increase of approximately 7,000 gas customers (growth rate of 2.1%), increasing its total gas customers to approximately 329,000 (as of December 31, 2013).

Demand for gas changes primarily due to weather and the price relationship between gas and alternate fuels.

Gas Cost, Supply and Curtailment Plans

SCE&G purchases natural gas under contracts with producers and marketers in both the spot and long-term markets. The gas is delivered to South Carolina through firm transportation agreements with Southern Natural (expiring in 2014 and 2018), Transco (expiring in 2017) and CGT (expiring in 2014, 2018, 2023 and 2026). The maximum daily volume of gas that SCE&G is entitled to transport under these contracts is 222,404 MMBTU from Southern Natural, 64,652 MMBTU from Transco and 425,929 MMBTU from CGT. Additional natural gas volumes may be delivered to SCE&G's system as capacity is available through interruptible transportation.

The daily volume of gas that SEMI is entitled to transport under service agreements with CGT (expiring in 2016, 2017 and 2023) on a firm basis is 82,615 MMBTU.

SCE&G purchased natural gas, including fixed transportation, at an average cost of $5.35 per MCF during 2013 and $4.73 per MCF during 2012.

SCE&G was allocated 5,382 MMCF of natural gas storage capacity on the systems of Southern Natural and Transco. Approximately 4,039 MMCF of gas were in storage on December 31, 2013. To meet the requirements of its high priority natural gas customers during periods of maximum demand, SCE&G supplements its supplies of natural gas with two LNG liquefaction and storage facilities. The LNG plants are capable of storing the liquefied equivalent of 1,880 MMCF of natural gas. Approximately 1,635 MMCF (liquefied equivalent) of gas were in storage on December 31, 2013.

PSNC Energy purchases natural gas under contracts with producers and marketers on a short-term basis at market based prices and on a long-term basis for reliability assurance at first of the month index prices plus a reservation charge in certain cases. Transco transports natural gas to North Carolina through transportation agreements with varying expiration dates through 2032. On a peak day, PSNC Energy is capable of receiving daily transportation volumes of natural gas under these contracts, utilizing firm contracts of 610,062 MMBTU from Transco.

PSNC Energy purchased natural gas, including fixed transportation, at an average cost of $5.13 per MMBTU during 2013 compared to $4.65 per MMBTU during 2012.

To meet the requirements of its high priority natural gas customers during periods of maximum demand, PSNC Energy supplements its supplies of natural gas with underground natural gas storage services and LNG peaking services. Underground natural gas storage service agreements with Dominion Transmission, Inc., Columbia Gas Transmission, Transco and Spectra Energy provide for storage capacity of approximately 13,000 MMCF. Approximately 10,000 MMCF of gas were in storage under these agreements at December 31, 2013. In addition, PSNC Energy's LNG facility can store the liquefied equivalent of 1,000 MMCF of natural gas with regasification capability of approximately 100 MMCF per day. Approximately 900 MMCF (liquefied equivalent) of gas were in storage at December 31, 2013. LNG storage service agreements with Transco, Cove Point LNG and Pine Needle LNG provide for 1,300 MMCF (liquefied equivalent) of storage space. Approximately 1,100 MMCF (liquefied equivalent) were in storage under these agreements at December 31, 2013.

SCANA and SCE&G believe that supplies under long-term contracts and supplies available for spot market purchase are adequate to meet existing customer demands and to accommodate growth.

Gas Marketing-Nonregulated

SEMI markets natural gas and provides energy-related risk management services primarily in the Southeast. In addition, SCANA Energy, a division of SEMI, markets natural gas to approximately 454,000 customers (as of December 31, 2013) in Georgia's natural gas market. SCANA Energy's total customer base represents an approximate 30% share of the approximately 1.5 million customers in Georgia's deregulated natural gas market. SCANA Energy remains the second largest natural gas marketer in the state.

Risk Management

For a discussion of risk management policies and procedures, see Note 6 to the consolidated financial statements for SCANA and SCE&G.

REGULATION

For a discussion of legislative and regulatory initiatives being implemented that will affect SCE&G's transmission system, see Electric Operations within the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

For a discussion of the regulatory jurisdictions to which SCANA and its subsidiaries are subject, see the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $150 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2014.

SCE&G holds licenses under the Federal Power Act for each of its hydroelectric projects. The licenses expire as follows:

Project	License Expiration
Saluda (Lake Murray)	2014
Fairfield Pumped Storage/Parr Shoals	2020
Stevens Creek	2025
Neal Shoals	2036

SCE&G is presently operating the Saluda hydroelectric project under an annual license (scheduled to expire in August) while its long-term re-licensing application is being reviewed by FERC.

At the termination of a license under the Federal Power Act, FERC may extend or issue a new license to the previous licensee, or may issue a license to another applicant, or the federal government may take over the related project. If the federal government takes over a project or if FERC issues a license to another applicant, the federal government or the new licensee, as the case may be, must pay the previous licensee an amount equal to its net investment in the project, not to exceed fair value, plus severance damages.

RATE MATTERS

For a discussion of the impact of various rate matters, see the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G, and Note 2 to the consolidated financial statements for SCANA and SCE&G.

Prior to the first billing cycle of January 2014, SCE&G's retail electric rates for its residential and certain small commercial customers included an eWNA approved by the SCPSC, which largely mitigated the impact of weather on electric margins. In connection with a December 2013 SCPSC order, SCE&G discontinued the eWNA.

SCE&G's retail electric rates include certain costs associated with its DSM Programs as authorized by the SCPSC. More specifically, these rates include the costs and lost net margin revenue associated with DSM Programs, along with an incentive for investing in such programs.

Under the BLRA, SCE&G is allowed to file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Requested rate adjustments are based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11%.

In May 2011 and in November 2012, the SCPSC approved updated capital cost schedules sought by SCE&G that, among other matters, incorporated then-identifiable additional capital costs and revised substantial completion dates for the New Units, and included amounts to resolve certain claims. Details of these SCPSC approvals are further described in Notes 2 and 10 to the consolidated financial statements for SCANA and SCE&G.

In December 2012, the SCPSC approved a 4.23% overall increase in SCE&G's retail electric base rates and authorized SCE&G an allowed return on common equity of 10.25% (related to non-BLRA expenditures). The SCPSC also approved a mid-period reduction to the cost of fuel component in rates, as well as a reduction in the DSM Programs component rider to retail rates, among other things. See Note 2 to the consolidated financial statements for SCANA and SCE&G for additional details.

SCE&G's gas rate schedules for its residential, small commercial and small industrial customers include a WNA approved by the SCPSC, which is in effect for bills rendered for billing cycles in November through April. The WNA increases tariff rates if weather is warmer than normal and decreases rates if weather is colder than normal. The WNA does not change the seasonality of gas revenues, but reduces fluctuations in revenues and earnings caused by abnormal weather.

PSNC Energy is authorized by the NCUC to utilize a CUT which allows PSNC Energy to adjust its base rates semi-annually for residential and commercial customers based on average per customer consumption, whether impacted by weather or other factors.

Fuel Cost Recovery Procedures

The SCPSC's fuel cost recovery procedure determines the fuel component in SCE&G's retail electric base rates annually based on projected fuel costs for the ensuing 12-month period, adjusted for any over-collection or under-collection from the preceding 12-month period. The statutory definition of fuel costs includes certain variable environmental costs, such as ammonia, lime, limestone and catalysts consumed in reducing or treating emissions. The definition also includes the cost of emission allowances used for sulfur dioxide, nitrogen oxide, mercury and particulates. SCE&G may request a formal proceeding concerning its fuel costs at any time. SCPSC proceedings related to SCE&G's cost of fuel component are described in Note 2 to the consolidated financial statements for SCANA and SCE&G.

SCE&G's natural gas tariffs include a PGA clause that provides for the recovery of actual gas costs incurred, including transportation costs. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average. SCPSC proceedings related to SCE&G's natural gas tariffs are described in Note 2 to the consolidated financial statements for SCANA and SCE&G.

PSNC Energy is subject to a Rider D rate mechanism which allows it to recover from customers all prudently incurred gas costs, including gas costs that were uncollectible from certain customers. The Rider D rate mechanism also allows it to recover, in any manner authorized by the NCUC, losses on negotiated gas and transportation sales.

PSNC Energy's rates are established using a benchmark cost of gas approved by the NCUC, which may be adjusted periodically to reflect changes in the market price of natural gas. PSNC Energy revises its tariffs with the NCUC as necessary to track these changes and accounts for any over- or under-collections of the delivered cost of gas in its deferred accounts for subsequent rate consideration. The NCUC reviews PSNC Energy's gas purchasing practices annually. In addition, PSNC Energy utilizes a CUT which allows it to adjust its base rates semi-annually for residential and commercial customers based on average per customer consumption. NCUC proceedings related to PSNC Energy's rates are described in Note 2 to the consolidated financial statements for SCANA.

ENVIRONMENTAL MATTERS

Federal and state authorities have imposed environmental regulations and standards relating primarily to air emissions, wastewater discharges and solid, toxic and hazardous waste management. Developments in these areas may require that equipment and facilities be modified, supplemented or replaced. The ultimate effect of these regulations and standards upon existing and proposed operations cannot be predicted. For a more complete discussion of how these regulations and standards impact SCANA and SCE&G, see the Environmental Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 10 to the consolidated financial statements for SCANA and SCE&G.

OTHER MATTERS

For a discussion of SCE&G's insurance coverage for Summer Station Unit 1 and the New Units, see Note 10 to the consolidated financial statements for SCANA and SCE&G.

ITEM 1A. RISK FACTORS

The risk factors that follow relate in each case to SCANA and its subsidiaries, and where indicated the risk factors also relate to SCE&G and its consolidated affiliates.

Commodity price changes, delays and other factors may affect the operating cost, capital expenditures and competitive positions of the Company's and Consolidated SCE&G's energy businesses, thereby adversely impacting results of operations, cash flows and financial condition.

Our energy businesses are sensitive to changes in coal, natural gas, uranium and other commodity prices (as well as their transportation costs) and availability. Any such changes could affect the prices these businesses charge, their operating costs and the competitive position of their products and services. Consolidated SCE&G is permitted to recover the prudently incurred cost of purchased power and fuel (including transportation) used in electric generation through retail customers' bills, but purchased power and fuel cost increases affect electric prices and therefore the competitive position of electricity against other energy sources. In addition, when natural gas prices are low enough relative to coal to require the dispatch of gas-fired electric generation ahead of coal-fired electric generation, higher inventories of coal, with related increased carrying costs, may result. This may adversely affect our results of operations, cash flows and financial position.

In the case of regulated natural gas operations, costs prudently incurred for purchased gas and pipeline capacity may be recovered through retail customers' bills. However, in both our regulated and deregulated natural gas markets, increases in gas costs affect total retail prices and therefore the competitive position of gas relative to electricity and other forms of energy. Accordingly, customers able to do so may switch to alternative forms of energy and reduce their usage of gas from the Company and Consolidated SCE&G. Customers unable to switch to alternative fuels or suppliers may reduce their usage of gas from the Company and Consolidated SCE&G.

Certain construction-related commodities, such as copper and aluminum used in our transmission and distribution lines and in our electrical equipment, and steel, concrete and rare earth elements, have experienced significant price fluctuations due to changes in worldwide demand. To operate our air emissions control equipment, we use significant quantities of ammonia, limestone and lime. With EPA-mandated industry-wide compliance requirements for air emissions controls, increased demand for these reagents, combined with the increased demand for low sulfur coal, may result in higher costs for coal and reagents used for compliance purposes.

The costs of large capital projects, such as the Company's and Consolidated SCE&G's construction for environmental compliance and its construction of the New Units and associated transmission, are significant and are subject to a number of risks and uncertainties that may adversely affect the cost, timing and completion of the projects.

The Company's and Consolidated SCE&G's businesses are capital intensive and require significant investments in energy generation and in other internal infrastructure projects, including projects for environmental compliance. For example, SCE&G and Santee Cooper have agreed to jointly own, contract the design and construction of, and operate the New Units, which will be two 1,250 MW (1,117 MW, net) nuclear units at SCE&G's Summer Station, in pursuit of which they have committed and are continuing to commit significant resources. In addition, construction of significant new transmission infrastructure is necessary to support the New Units and is under way as an integral part of the project. Achieving the intended benefits of any large construction project is subject to many uncertainties. For instance, the ability to adhere to established budgets and timeframes may be affected by many variables, such as the regulatory and legal processes associated with securing permits and licenses and necessary amendments to them within projected timeframes, the availability of labor and materials at estimated costs, the availability and cost of financing, and weather. There also may be contractor or supplier performance issues or adverse changes in their creditworthiness, and unforeseen difficulties meeting critical regulatory requirements. There may be unforeseen engineering problems or unanticipated changes in project design or scope. Our ability to complete construction projects (including new baseload generation) as well as our ability to maintain current operations at reasonable cost could be affected by the availability of key components or commodities, increases in the price of or the unavailability of labor, commodities or other materials, increases in lead times for components, new or enhanced environmental requirements, supply chain failures (whether resulting from the foregoing or other factors), and disruptions in the transportation of components, commodities and fuels. Some of the foregoing issues have been experienced in the construction of the New Units. A discussion of certain of those matters can be found under New Nuclear Construction Matters in Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS for SCANA and SCE&G.

Should the construction of the New Units materially and adversely deviate from the schedules, estimates, and projections submitted to and approved by the SCPSC pursuant to the BLRA, the SCPSC could disallow the additional capital costs that result from the deviations to the extent that it is deemed that the Company's failure to anticipate or avoid the deviation, or to minimize the resulting expenses, was imprudent, considering the information available at the time. Depending upon the magnitude of any such disallowed capital costs, the Company could be moved to evaluate the prudency of continuation, adjustment to, or termination of the New Units project.

Furthermore, jointly owned projects, such as the current construction of the New Units, are subject to the risk that one or more of the joint owners becomes either unable or unwilling to continue to fund project financial commitments, new joint owners cannot be secured at equivalent financial terms, or changes in the joint ownership make-up will increase project costs and/or delay the completion.

To the extent that delays occur, costs become unrecoverable, or we otherwise become unable to effectively manage and complete our capital projects, our results of operations, cash flows and financial condition may be adversely affected.

The use of derivative instruments could result in financial losses and liquidity constraints. The Company and Consolidated SCE&G do not fully hedge against financial market risks or price changes in commodities. This could result in increased costs, thereby resulting in lower margins and adversely affecting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G use derivative instruments, including futures, forwards, options and swaps, to manage our financial market risks. The Company also uses such derivative instruments to manage certain commodity (i.e. natural gas) market risk. We could recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities and financial contracts or if a counterparty fails to perform under a contract.

The Company strives to manage commodity price exposure by establishing risk limits and entering into contracts to offset some of our positions (i.e., to hedge our exposure to demand, market effects of weather and other changes in commodity prices). We do not hedge the entire exposure of our operations from commodity price volatility. To the extent we do not hedge against commodity price volatility or our hedges are not effective, results of operations, cash flows and financial condition may be diminished.

Furthermore, Dodd-Frank affects the use and reporting of derivative instruments. The regulations under this new legislation provide for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and require numerous rule-makings by the CFTC and the SEC to implement. The Company and Consolidated SCE&G have determined that they meet the end-user exception to mandatory clearing of swaps under Dodd-Frank. In addition, the Company and Consolidated SCE&G have taken steps to ensure that they are not the party required to report these transactions in real-time (the "reporting party") by transacting solely with swap dealers, major swap participants and financial institutions, when possible, as well as entering into reporting party agreements with counterparties who also are not swap dealers, major swap participants or financial institutions, which establishes that those counterparties are obligated to report the transactions in accordance with applicable Dodd-Frank regulations. While these actions minimize the reporting obligations of the Company, they do not eliminate required recordkeeping for any Dodd-Frank regulated transactions. Moreover, the Company retains reporting responsibility for certain types of swaps, such as the annual reporting of trade options. Despite qualifying for the end-user exception to mandatory clearing and ensuring that neither the Company nor Consolidated SCE&G is the reporting party to a transaction required to be reported in real-time, we cannot predict when the final regulations will be issued or what requirements they will impose.

Changing and complex laws and regulations to which the Company and Consolidated SCE&G are subject could adversely affect revenues, increase costs, or curtail activities, thereby adversely impacting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G operate under the regulatory authority of the United States government and its various regulatory agencies, including the FERC, NRC, SEC, IRS, EPA, CFTC and PHMSA. In addition, the Company and Consolidated SCE&G are subject to regulation by the state governments of South Carolina, North Carolina and Georgia via regulatory agencies, state environmental commissions, and state employment commissions. Accordingly, the Company and Consolidated SCE&G must comply with extensive federal, state and local laws and regulations. Such governmental oversight and regulation broadly and materially affect the operation of our business. In addition to many other aspects of our business, these requirements impact the licensing, siting, construction and operation of facilities. They affect our management of safety, the reliability of our electric and natural gas transmission systems, the physical and cyber security of key assets, customer conservation through DSM Programs, information security, the issuance of securities and borrowing of money, financial reporting, interactions among affiliates, the payment of dividends and employment programs and practices. Changes to governmental regulations are continual and potentially costly to effect compliance. We cannot predict the future course of changes in this regulatory environment or the ultimate effect that this changing regulatory environment will have on the Company's or Consolidated SCE&G's businesses.

Furthermore, changes in or uncertainty in monetary, fiscal, or regulatory policies of the Federal government may adversely affect the debt and equity markets and the economic climate for the nation, region or particular industries, such as ours or those of our customers. The Company and Consolidated SCE&G could be adversely impacted by changes in tax policy, such as the loss of Production Tax Credits related to the construction of the New Units.

The Company and Consolidated SCE&G are subject to extensive rate regulation which could adversely affect operations. Large capital projects, DSM Programs results and/or increases in operating costs may lead to requests for regulatory relief, such as rate increases, which may be denied, in whole or part, by rate regulators. Rate increases may also result in reductions in customer usage of electricity or gas, legislative action and lawsuits.

SCE&G's electric operations in South Carolina and the Company's gas distribution operations in South Carolina and North Carolina are regulated by state utilities commissions. In addition, the construction of the New Units by SCE&G is subject to rate regulation by the SCPSC via the BLRA. The Company's interstate gas pipeline, SCE&G's electric transmission system and Consolidated SCE&G's generating facilities are subject to extensive regulation and oversight from the FERC, NRC and SCPSC. Our gas marketing operations in Georgia are subject to state regulatory oversight and, for a portion of its operations, to rate regulation. There can be no assurance that Georgia's gas delivery regulatory framework will remain unchanged as market conditions evolve. Although we believe that we have constructive relationships with the regulators, our ability to obtain rate treatment that will allow us to maintain reasonable rates of return is dependent upon regulatory determinations, and there can be no assurance that we will be able to implement rate adjustments when sought.

The Company and Consolidated SCE&G are subject to numerous environmental laws and regulations that require significant capital expenditures, can increase our costs of operations and may impact our business plans or expose us to environmental liabilities.

The Company and Consolidated SCE&G are subject to extensive federal, state and local environmental laws and regulations, including those relating to water quality and air emissions (such as reducing nitrogen oxide, sulfur dioxide, mercury and particulate matter). Some form of regulation is expected at the federal and state levels to impose regulatory requirements specifically directed at reducing GHG emissions from fossil fuel-fired electric generating units. On September 20, 2013, the EPA re-proposed NSPS for emissions of carbon dioxide from newly constructed fossil fuel-fired electric generating units. Standards, regulations, or guidelines are also expected for existing units by June 1, 2014, to be made final no later than June 1, 2015. A number of bills have been introduced in Congress that seek to require GHG emissions reductions from fossil fuel-fired electric generation facilities, natural gas facilities and other sectors of the economy, although none have yet been enacted. On February 16, 2012, the EPA issued the finalized MATS for power plants that requires reduced emissions from new and existing coal and oil-fired electric utility steam generating facilities. The EPA has proposed requirements for cooling water intake structures to meet the best technology available, and the EPA presently is drafting a final rule regarding the handling of coal ash and other combustion by-products produced by power plant operations. Furthermore, the EPA has proposed new standards under the CWA governing effluent limitation guidelines for electric generating units.

Compliance with these environmental laws and regulations requires us to commit significant capital toward environmental monitoring, installation of pollution control equipment, emissions fees and permitting at our facilities. These expenditures have been significant in the past and are expected to continue or even increase in the future. Changes in compliance requirements or more restrictive interpretations by governmental authorities of existing requirements may impose additional costs on us (such as the clean-up of MGP sites or additional emission allowances) or require us to incur additional capital expenditures or curtail some of our cost savings activities (such as the recycling of fly ash and other coal combustion products for beneficial use). Compliance with any GHG emission reduction requirements, including any mandated renewable portfolio standards, also may impose significant costs on us, and the resulting price increases to our customers may lower customer consumption. Such costs of compliance with environmental regulations could negatively impact our industry, our business and our results of operations and financial position, especially if emissions or discharge limits are reduced or more onerous permitting requirements or additional regulatory requirements are imposed.

Renewable and/or alternative electric generation portfolio standards may be enacted at the federal or state level. Some states already have them, though currently South Carolina does not. Such standards could direct us to build or otherwise acquire generating capacity derived from renewable/alternative energy sources (generally, renewable energy such as biomass, solar, wind and tidal, and excluding fossil fuels, nuclear or hydro facilities). Such renewable/alternative energy may not be readily available in our service territories, if at all, and could be extremely costly to build, acquire, and operate. Resulting increases in the price of electricity to recover the cost of these types of generation, if approved by regulatory commissions, could result in lower usage of electricity by our customers. Although we cannot predict whether such standards will be adopted at the federal level or in South Carolina or their specifics if adopted, compliance with such potential portfolio standards could significantly impact our industry, our capital expenditures, and our results of operations and financial position.

The compliance costs of these environmental laws and regulations are important considerations in the Company's and Consolidated SCE&G's strategic planning and, as a result, significantly affect the decisions to construct, operate, and retire facilities, including generating facilities. In effecting compliance with MATS, SCE&G announced in 2012 that six of its oldest and smallest coal-fired units would be taken off-line or temporarily switched from coal to natural gas prior to closure in 2018. One of these units was retired in late 2012. Two other of these units were retired in late 2013.

The Company and Consolidated SCE&G are vulnerable to interest rate increases, which would increase our borrowing costs, and may not have access to capital at favorable rates, if at all. Additionally, potential disruptions in the capital and credit markets may further adversely affect the availability and cost of short-term funds for liquidity requirements and our ability to meet long-term commitments; each could in turn adversely affect our results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G rely on the capital markets, particularly for publicly offered debt and equity, as well as the banking and commercial paper markets, to meet our financial commitments and short-term liquidity needs if internal funds are not available from operations. Changes in interest rates affect the cost of borrowing. The Company’s and Consolidated SCE&G’s business plans, which include significant investments in energy generation and other internal infrastructure projects, reflect the expectation that we will have access to the capital markets on satisfactory terms to fund commitments. Moreover, the ability to maintain short-term liquidity by utilizing commercial paper programs is dependent upon maintaining satisfactory short-term debt ratings and the existence of a market for our commercial paper generally.

The Company’s and Consolidated SCE&G’s ability to draw on our respective bank revolving credit facilities is dependent on the ability of the banks that are parties to the facilities to meet their funding commitments and on our ability to timely renew such facilities. Those banks may not be able to meet their funding commitments to the Company or Consolidated SCE&G if they experience shortages of capital and liquidity or if they experience excessive volumes of borrowing requests from us and other borrowers within a short period of time. Longer-term disruptions in the capital and credit markets as a result of uncertainty, changing or increased regulation, reduced alternatives or failures of significant financial institutions could adversely affect our access to liquidity needed for our business. Any disruption could require the Company and Consolidated SCE&G to take measures to conserve cash until the markets stabilize or until alternative credit arrangements or other funding for our business needs can be arranged. Such measures could include deferring capital expenditures or other discretionary uses of cash. Disruptions in capital and credit markets also could result in higher interest rates on debt securities, limited or no access to the commercial paper market, increased costs associated with commercial paper borrowing or limitations on the maturities of commercial paper that can be sold (if at all), increased costs under bank credit facilities and reduced availability thereof, and increased costs for certain variable interest rate debt securities of the Company and Consolidated SCE&G.

Disruptions in the capital markets and its actual or perceived effects on particular businesses and the greater economy also adversely affect the value of the investments held within SCANA’s pension trust. A significant long-term decline in the value of these investments may require us to make or increase contributions to the trust to meet future funding requirements. In addition, a significant decline in the market value of the investments may adversely impact the Company’s and Consolidated SCE&G’s results of operations, cash flows and financial position, including its shareholders’ equity.

A downgrade in the credit rating of SCANA or any of SCANA’s subsidiaries, including SCE&G, could negatively affect our ability to access capital and to operate our businesses, thereby adversely affecting results of operations, cash flows and financial condition.

Various rating agencies rate SCANA’s long-term senior unsecured debt, SCE&G’s long-term senior secured debt, and the long-term senior unsecured debt of PSNC Energy as investment grade. In addition, ratings agencies maintain ratings on the short-term debt of SCANA, SCE&G, Fuel Company (which ratings are based upon the guarantee of SCE&G) and PSNC Energy. If these rating agencies were to lower the outlook or downgrade any of these ratings, particularly to below investment grade, borrowing cost on new issuances would increase, which would diminish financial results, and the potential pool of investors and funding sources could decrease.

In 2011, one rating agency downgraded both the short-term and senior unsecured long-term debt of SCANA. In 2013, another rating agency revised the outlook for SCANA and its subsidiaries to negative from stable. These downgrades and lowered outlook have increased the short-term borrowing rates of SCANA and may have the effect of increasing the long-term borrowing rates of SCANA and SCE&G. Although access to the short-term market has not been adversely impacted, this could change under different market conditions.

SCANA's leverage ratio of long- and short-term debt to capital was approximately 56% at December 31, 2013. SCANA has publicly announced its desire to maintain its leverage ratio between 54% and 57%, but SCANA's ability to do so depends on a number of factors. In the future, if SCANA is not able to maintain its leverage ratio within the desired range, the Company's debt ratings may be affected, it may be required to pay higher interest rates on its long- and short-term indebtedness, and its ability to access the capital markets may be impaired.

Operating results may be adversely affected by natural disasters, man-made mishaps and abnormal weather.

The Company has delivered less gas and received lower prices for natural gas in deregulated markets when weather conditions have been milder than normal, and as a consequence earned less income from those operations. During 2010, the SCPSC approved SCE&G's implementation of an eWNA on a pilot basis; it was discontinued at the end of 2013. Mild weather in the future could diminish the revenues and results of operations and harm the financial condition of the Company and Consolidated SCE&G. Hot or cold weather could result in higher bills for customers and result in higher write-offs of receivables and in a greater number of disconnections for non-payment. In addition, for the Company and Consolidated SCE&G, severe weather can be destructive, causing outages and property damage, adversely affecting operating expenses and revenues.

Natural disasters (such as electromagnetic events and the 2011 earthquake and tsunami in Japan) or man-made mishaps (such as the San Bruno, California natural gas transmission pipeline failure, the Kingston, Tennessee coal ash pond failure, and cyber-security failures experienced by many businesses) could have direct significant impacts on the Company and Consolidated SCE&G and on our key contractors and suppliers or could indirectly impact us through changes to federal, state or local policies, laws and regulations, and have a significant impact on our financial position, operating expenses, and cash flows.

Potential competitive changes may adversely affect our gas and electricity businesses due to the loss of customers, reductions in revenues, or write-down of stranded assets.

The utility industry has been undergoing structural change for a number of years, resulting in increasing competitive pressures on electric and natural gas utility companies. Competition in wholesale power sales via a RTO/ISO (Regional Transmission Organization/Independent System Operator) is in effect across much of the country, but the Southeastern utilities have retained the traditional bundled, vertically integrated structure. Should a RTO/ISO-market be implemented in the Southeast, potential risks emerge from reliance on volatile wholesale market prices as well as increased costs associated with new delivery transmission and distribution infrastructure.

Some states have also mandated or encouraged unbundled retail competition. Should this occur in South Carolina, increased competition may create greater risks to the stability of utility earnings generally and may in the future reduce earnings from retail electric and natural gas sales. In a deregulated environment, formerly regulated utility companies that are not responsive to a competitive energy marketplace may suffer erosion in market share, revenues and profits as competitors gain access to their customers. In addition, the Company's and Consolidated SCE&G's generation assets would be exposed to considerable financial risk in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, a write-down in the value of the related assets would be required.

The Company and Consolidated SCE&G are subject to the risk of loss of sales due to the growth of distributed generation especially in the form of renewable power such as solar photovoltaic systems. As a result of federal and state subsidies and potential regulations allowing third-party retail sales, the growth of such distributed generation could be significant in the future. Such growth will lessen Company and Consolidated SCE&G sales and slow growth, potentially causing higher rates to customers.

The Company and SCE&G are subject to risks associated with changes in business and economic climate which could adversely affect revenues, results of operations, cash flows and financial condition and could limit access to capital.

Sales, sales growth and customer usage patterns are dependent upon the economic climate in the service territories of the Company and SCE&G, which may be affected by regional, national or even international economic factors. Some economic sectors important to our customer base may be particularly affected. Adverse events, economic or otherwise, may also affect the operations of suppliers and key customers. Such events may result in the loss of suppliers or customers, in costs charged by suppliers, in changes to customer usage patterns and in the failure of customers to make timely payments to us. With respect to the Company, such events also could adversely impact the results of operations through the recording of a goodwill or other asset impairment. The success of local and state governments in attracting new industry to our service territories is important to our sales and growth in sales, as are stable levels of taxation (including property, income or other taxes) which may be affected by local, state, or federal budget deficits, adverse economic climates generally or legislative or regulatory actions. Budget cutbacks also adversely affect funding levels of federal and state support agencies and non-profit organizations that assist low income customers with bill payments.

In addition, conservation and demand side management efforts and/or technological advances may cause or enable customers to significantly reduce their usage of the Company’s and SCE&G’s products and adversely affect sales, sales growth, and customer usage patterns.

Factors that generally could affect our ability to access capital include economic conditions and our capital structure. Much of our business is capital intensive, and achievement of our capital plan and long-term growth targets is dependent, at least in part, upon our ability to access capital at rates and on terms we determine to be attractive. If our ability to access capital becomes significantly constrained, our interest costs will likely increase and our financial condition and future results of operations could be significantly harmed.

Problems with operations could cause us to curtail or limit our ability to serve customers or cause us to incur substantial costs, thereby adversely impacting revenues, results of operations, cash flows and financial condition.

Critical processes or systems in the Company’s or Consolidated SCE&G’s operations could become impaired or fail from a variety of causes, such as equipment breakdown, transmission line failure, information systems failure or security breach, the effects of drought (including reduced water levels) on the operation of emission control or other generation equipment, and the effects of a pandemic or terrorist attack on our workforce or facilities or on the ability of vendors and suppliers to maintain services key to our operations.

In particular, as the operator of power generation facilities, many of which entered service prior to 1985 and may be difficult to maintain, Consolidated SCE&G could incur problems, such as the breakdown or failure of power generation or emission control equipment, transmission equipment, or other equipment or processes which would result in performance below assumed levels of output or efficiency. The operation of the New Units may entail additional cycling of our coal-fired generation facilities and may thereby increase the number of unplanned outages at those facilities. In addition, any such breakdown or failure may result in Consolidated SCE&G purchasing emission allowances or replacement power at market rates, if such allowances and replacement power are available at all. These purchases are subject to state regulatory prudency reviews for recovery through rates. If replacement power is not available, such problems could result in interruptions of service (blackout or brownout conditions) in all or part of SCE&G’s territory or elsewhere in the region. Similarly, a gas transmission or distribution line failure of the Company or Consolidated SCE&G could affect the safety of the public, destroy property, and interrupt our ability to serve customers.

Events such as these could entail substantial repair costs, litigation, fines and penalties, and damage to reputation, each of which could have an adverse effect on the Company’s revenues, results of operations, and financial condition. Insurance may not be available or adequate to respond to these events.

A failure of the Company to maintain the physical and cyber security of its operations may result in the failure of operations, damage to equipment, or loss of information, and could result in a significant adverse impact to the Company's financial position, results of operations and cash flows.

The Company depends on maintaining the physical and cyber security of its operations and assets. As much of our business is part of the nation's critical infrastructure, the loss or impairment of the assets associated with that portion of our business could have serious adverse impacts on the customers and communities that we serve. Virtually all of the Company's operations are dependent in some manner upon our cyber systems, which encompass electric and gas transmission and distribution operations, nuclear and fossil fuel generating plants, human resource and customer systems and databases, information system networks, and systems containing confidential corporate information. Cyber systems, such as those of the Company, are often targets of malicious cyber attacks. A successful physical or cyber attack could lead to outages, failure of operations of all or portions of our businesses, damage to key components and equipment, and exposure of confidential customer, employee, or corporate information. The Company may not be readily able to recover from such events. In addition, the failure to secure our operations from such physical and cyber events may cause us reputational damage. Litigation, penalties and claims from a number of parties, including customers, regulators and shareholders, may ensue. Insurance may not be adequate to respond to these events. As a result, the Company's financial position, results of operations, and cash flows may be adversely affected.

SCANA's ability to pay dividends and to make payments on SCANA's debt securities may be limited by covenants in certain financial instruments and by the financial results and condition of its subsidiaries, thereby adversely impacting the valuation of our common stock and our access to capital .

We are a holding company that conducts substantially all of our operations through our subsidiaries. Our assets consist primarily of investments in subsidiaries. Therefore, our ability to meet our obligations for payment of interest and principal on outstanding debt and to pay dividends to shareholders and corporate expenses depends on the earnings, cash flows, financial condition and capital requirements of our subsidiaries, and the ability of our subsidiaries, principally Consolidated SCE&G, PSNC Energy and SEMI, to pay dividends or to repay funds to us. Our ability to pay dividends on our common stock may also be limited by existing or future covenants limiting the right of our subsidiaries to pay dividends on their common stock. Any significant reduction in our payment of dividends in the future may result in a decline in the value of our common stock. Such a decline in value could limit our ability to raise debt and equity capital.

A significant portion of Consolidated SCE&G's generating capacity is derived from nuclear power, the use of which exposes us to regulatory, environmental and business risks. These risks could increase our costs or otherwise constrain our business, thereby adversely impacting our results of operations, cash flows and financial condition. These risks will increase as the New Units are developed.

In 2013, Summer Station Unit 1, operated by SCE&G, provided approximately 5.6 million MWh, or 24% of our generation. When the New Units are completed, our generating capacity and the percentage of total generating capacity represented by nuclear sources are expected to increase. Hence, SCE&G is subject to various risks of nuclear generation, which include the following:

- The potential harmful effects on the environment and human health resulting from a release of radioactive materials in connection with the operation of nuclear facilities and the storage, handling and disposal of radioactive materials;
- Limitations on the amounts and types of insurance commercially available to cover losses that might arise in connection with our nuclear operations or those of others in the United States;
- The possibility that new laws and regulations could be enacted that could adversely affect the liability structure that currently exists in the United States;
- Uncertainties with respect to procurement of nuclear fuel and the storage of spent nuclear fuel;
- Uncertainties with respect to contingencies if insurance coverage is inadequate; and
- Uncertainties with respect to the technological and financial aspects of decommissioning nuclear plants at the end of their operating lives.

The NRC has broad authority under federal law to impose licensing and safety-related requirements for the operation of nuclear generation facilities. In the event of non-compliance, the NRC has the authority to impose fines or shut down a unit, or both, depending upon its assessment of the severity of the situation, until compliance is achieved. Revised safety requirements promulgated by the NRC could necessitate capital expenditures at nuclear plants such as ours. In addition, although we have no reason to anticipate a serious nuclear incident, if a major incident should occur at a domestic nuclear facility, it could harm our results of operations, cash flows and financial condition. A major incident at a nuclear facility anywhere in the world could cause the NRC to limit or prohibit the operation or licensing of any domestic nuclear unit. Finally, in today's environment, there is a heightened risk of terrorist attack on the nation's nuclear facilities, which has resulted in increased security costs at our nuclear plant.

Failure to retain and attract key personnel could adversely affect the Company's and Consolidated SCE&G's operations and financial performance.

As with many other utilities, a significant portion of our workforce will be eligible for retirement during the next few years. We must attract, retain and develop executive officers and other professional, technical and craft employees with the skills and experience necessary to successfully manage, operate and grow our business. Competition for these employees is high, and in some cases we must compete for these employees on a regional or national basis. We may be unable to attract and retain these personnel. Further, the Company's or Consolidated SCE&G's ability to construct or maintain generation or other assets requires the availability of suitable skilled contractor personnel. We may be unable to obtain appropriate contractor personnel at the times and places needed. Labor disputes with employees or contractors covered by collective bargaining agreements also could adversely affect implementation of our strategic plan and our operational and financial performance.

***The Company and Consolidated SCE&G are subject to the risk that strategic decisions made by us either do not result in a return of or on invested capital or might negatively impact our competitive position, which can adversely impact our results of operations, cash flows, financial position, and access to capital*.**

From time to time, the Company and Consolidated SCE&G make strategic decisions that may impact our direction with regard to business opportunities, the services and technologies offered to customers or that are used to serve customers, and the generating plants and other infrastructure that form the basis of much of our business. These strategic decisions may not result in a return of or on our invested capital, and the effects of these strategic decisions may have long-term implications that are not likely to be known to us in the short-term. Changing political climates and public attitudes may adversely affect the ongoing acceptability of strategic decisions that have been made (and, in some cases, previously approved by regulators), to the detriment of the Company or Consolidated SCE&G. Over time, these strategic decisions or changing attitudes toward such decisions, which could be adverse to the Company's or Consolidated SCE&G's interests, may have a negative effect on our results of operations, cash flows and financial position, as well as limit our ability to access capital.

The Company and Consolidated SCE&G are subject to the reputational risks that may result from a failure to adhere to high standards of compliance with laws and regulations, ethical conduct, operational effectiveness, and safety of employees, customers and the public. These risks could adversely affect the valuation of our common stock and the Company's and Consolidated SCE&G's access to capital.

The Company and Consolidated SCE&G are committed to comply with all laws and regulations, to focus on the safety of employees, customers and the public, to maintain the privacy of information related to our customers and employees and to maintain effective communications with the public and key stakeholder groups, particularly during emergencies and times of crisis. The Company and Consolidated SCE&G also are committed to operational excellence and, through our Code of Conduct and Ethics, to maintain high standards of ethical conduct in our business operations. A failure to meet these commitments may subject the Company and Consolidated SCE&G not only to fraud, litigation and financial loss, but also to reputational risk that could adversely affect the valuation of SCANA's stock, adversely affect the Company's and Consolidated SCE&G's access to capital, and result in further regulatory oversight. Insurance may not be available or adequate to respond to these events.

ITEM 1B. UNRESOLVED STAFF COMMENTS

Not Applicable

ITEM 2. PROPERTIES

SCANA owns no significant property other than the capital stock of each of its subsidiaries. It holds, directly or indirectly, all of the capital stock of each of its subsidiaries.

SCE&G's bond indenture, securing the First Mortgage Bonds issued thereunder, constitutes a direct mortgage lien on substantially all of its electric utility property. GENCO's Williams Station is also subject to a first mortgage lien which secures certain outstanding debt of GENCO.

ELECTRIC PROPERTIES

The following table shows the electric generating facilities and their net generating capacity as of December 31, 2013.

	In-Service Date	Net Generating Capacity Summer (MW)	
Coal-Fired Steam:			
McMeekin - Near Irmo, SC	1958	250	*
Wateree - Eastover, SC	1970	684	
Williams - Goose Creek, SC	1973	605	
Cope - Cope, SC	1996	415	
Kapstone - Charleston, SC	1999	85	
Gas-Fired Steam - Urquhart Unit 3 - Beech Island, SC	1953	95	*
Nuclear - V. C. Summer - Parr, SC (reflects SCE&G's 66.7% ownership share)	1984	647	
Internal Combustion Turbines:			
Peaking units - various locations in SC	1968-1999	352	

Urquhart Combined Cycle - Beech Island, SC	2002	458
Jasper Combined Cycle - Jasper, SC	2004	852
Hydro:		
Saluda - Irmo, SC	1930	200
Other hydro units - various locations in or bordering SC	1905-1914	18
Fairfield Pumped Storage - Parr, SC	1978	576

* As described in Note 2 to the consolidated financial statements for SCANA and SCE&G, under plans announced in 2012, SCE&G has retired or intends to retire six coal-fired units with an aggregate net generating capacity (summer rating) of 730 MW by 2018, subject to future developments in environmental regulations, among other matters. As of December 31, 2013, three of these units had been retired (with an aggregate net generating capacity, summer rating, of 385 MW) and are not included in the table above. Another unit, Urquhart Unit 3, was fueled with coal prior to 2013, and is expected to be fueled with natural gas until its retirement in 2018.

SCE&G owns 436 substations having an aggregate transformer capacity of 30 million KVA. The transmission system consists of 3,307 miles of lines, and the distribution system consists of 18,397 pole miles of overhead lines and 7,004 trench miles of underground lines.

NATURAL GAS DISTRIBUTION AND TRANSMISSION PROPERTIES

SCE&G's natural gas system includes 448 miles of transmission pipeline of up to 20 inches in diameter that connect its distribution system with Southern Natural, Transco and CGT. SCE&G’s distribution system consists of 16,450 miles of distribution mains and related service facilities. SCE&G also owns two LNG plants, one located near Charleston, South Carolina, and the other in Salley, South Carolina. The Charleston facility can liquefy up to 6 MMCF per day and store the liquefied equivalent of 980 MMCF of natural gas. The Salley facility can store the liquefied equivalent of 900 MMCF of natural gas and has no liquefying capabilities. The LNG facilities have the capacity to regasify approximately 60 MMCF per day at Charleston and 90 MMCF per day at Salley.

CGT’s natural gas system consists of 1,469 miles of transmission pipeline of up to 24 inches in diameter. CGT’s system transports gas to its customers from the transmission systems of Southern Natural at Port Wentworth, Georgia and Aiken County, South Carolina, Southern LNG, Inc. at Elba Island, near Savannah, Georgia and Transco in Cherokee and Spartanburg counties in South Carolina.

PSNC Energy’s natural gas system consists of 594 miles of transmission pipeline of up to 24 inches in diameter that connect its distribution systems with Transco. PSNC Energy’s distribution system consists of 20,411 miles of distribution mains and related service facilities. PSNC Energy owns one LNG plant with storage capacity of 1,000 MMCF, the capacity to liquefy up to 4 MMCF per day and the capacity to regasify approximately 100 MMCF per day. PSNC Energy also owns, through a wholly-owned subsidiary, 33.21% of Cardinal Pipeline Company, LLC, which owns a 105-mile transmission pipeline in North Carolina. In addition, PSNC Energy owns, through a wholly-owned subsidiary, 17% of Pine Needle LNG Company, LLC. Pine Needle owns and operates a liquefaction, storage and regasification facility in North Carolina.

ITEM 3. LEGAL PROCEEDINGS

SCANA and SCE&G are engaged in various claims and litigation incidental to their business operations which management anticipates will be resolved without a material impact on their respective results of operations, cash flows or financial condition. In addition, certain material regulatory and environmental matters and uncertainties, some of which remain outstanding at December 31, 2013, are described in the Rate Matters section of Note 2 and in the Environmental section of Note 10 to the consolidated financial statements of SCANA and SCE&G.

ITEM 4. MINE SAFETY DISCLOSURES

Not Applicable

EXECUTIVE OFFICERS OF SCANA CORPORATION

The executive officers are elected at the annual meeting of the Board of Directors, held immediately after the annual meeting of shareholders, and hold office until the next such annual meeting, unless (1) a resignation is submitted, (2) the Board of Directors shall otherwise determine or (3) as provided in the By-laws of SCANA. Positions held are for SCANA and all subsidiaries unless otherwise indicated.

Name	Age	Positions Held During Past Five Years	Dates
Kevin B. Marsh	58	Chairman of the Board and Chief Executive Officer	2011-present
		President and Chief Operating Officer-SCANA	2011-present

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES

COMMON STOCK INFORMATION

SCANA Corporation:

Price Range (NYSE Composite Listing):

	2013				2012			
	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.
High	$ 48.15	$ 52.93	$ 54.41	$ 51.23	$ 49.64	$ 50.34	$ 48.24	$ 46.12
Low	$ 44.75	$ 45.72	$ 47.22	$ 45.57	$ 44.71	$ 47.18	$ 43.32	$ 43.56

SCANA common stock trades on the NYSE using the ticker symbol SCG. Newspaper stock listings use the name SCANA. At February 20, 2014 there were 141,144,841 shares of SCANA common stock outstanding which were held by approximately 28,121 shareholders of record. For a summary of equity securities issuable under SCANA's compensation plans at December 31, 2013, see Item 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS.

SCANA declared quarterly dividends on its common stock of $.5075 per share in 2013 and $.495 per share in 2012. On February 20, 2014, SCANA increased the quarterly cash dividend rate on SCANA common stock to $.525 per share, an increase of approximately 3.5%. The next quarterly dividend is payable April 1, 2014 to shareholders of record on March 10, 2014. For a discussion of provisions that could limit the payment of cash dividends, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCANA.

SCE&G:

All of SCE&G's common stock is owned by SCANA, and no established public trading market exists for SCE&G common stock. During 2013 and 2012, SCE&G declared quarterly dividends on its common stock in the following amounts:

Declaration Date	Amount	Declaration Date	Amount
February 15, 2012	$ 51.6 million	February 20, 2013	$ 62.2 million
May 3, 2012	52.3 million	April 25, 2013	62.0 million
August 2, 2012	54.0 million	July 31, 2013	65.8 million
October 24, 2012	44.3 million	October 31, 2013	60.0 million

On February 20, 2014, SCE&G declared dividends on its common stock of $62.5 million.

For a discussion of provisions that could limit the payment of cash dividends, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCE&G.

ITEM 6. SELECTED FINANCIAL DATA

As of or for the Year Ended December 31,	2013	2012	2011	2010	2009
	(Millions of dollars, except statistics and per share amounts)

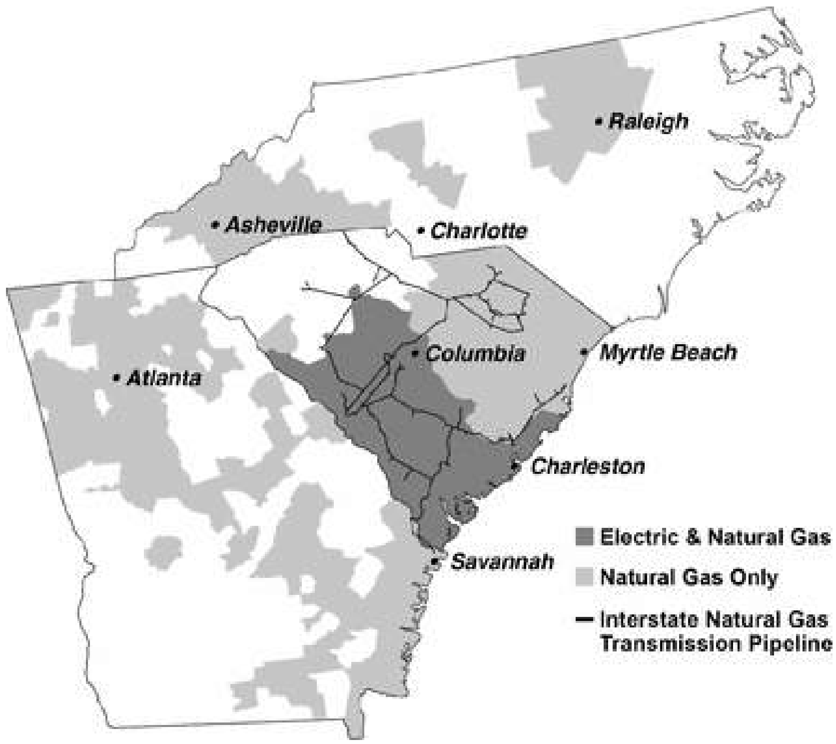
SCANA CORPORATION

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCANA, through its wholly-owned regulated subsidiaries, is primarily engaged in the generation, transmission, distribution and sale of electricity in parts of South Carolina and in the purchase, transmission and sale of natural gas in portions of North Carolina and South Carolina. Through a wholly-owned nonregulated subsidiary, SCANA markets natural gas to retail customers in Georgia and to wholesale customers primarily in the southeast. Other wholly-owned nonregulated subsidiaries provide fiber optic and other telecommunications services and provide service contracts on certain home appliances and heating and air conditioning units. A service company subsidiary of SCANA provides administrative, management and other services to SCANA and its subsidiaries.

The following map indicates areas where the Company's significant business segments conduct their activities, as further described in this overview section.



The following percentages reflect revenues and net income earned by the Company's regulated and nonregulated businesses (including the holding company) and the percentage of total assets held by them.

	2013	2012	2011
Revenues			
Regulated	75%	77%	74%
Nonregulated	25%	23%	26%
Net Income			
Regulated	97%	99%	97%
Nonregulated	3%	1%	3%
Assets			
Regulated	95%	95%	94%
Nonregulated	5%	5%	6%

Key Earnings Drivers and Outlook

During 2013, economic growth continued to improve in the southeast. Significant industrial announcements were made in the Company's South Carolina and North Carolina service territories during the year, and announcements made in previous years began to materialize. In addition, the Port of Charleston continues to see increased traffic, with container volume up 5.7% over 2012. Residential and commercial customer growth rates in the Company's regulated businesses also remained positive. Unemployment rates for the states in which the Company primarily provides service also improved in 2013, though such rates improved in part due to people leaving the workforce. Nationwide, the civilian labor force participation rate was 62.8% at December 31, 2013, matching a 35-year low.

Unemployment (seasonally adjusted)	United States	Georgia	North Carolina	South Carolina
December 31, 2013 (preliminary)	6.7%	7.4%	6.9%	6.6%
December 31, 2012	7.8%	8.7%	9.4%	8.6%
December 31, 2011	8.9%	9.4%	10.4%	9.6%

Over the next five years, key earnings drivers for the Company will be additions to rate base at its regulated subsidiaries, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage in each of the regulated utility businesses, earnings in the natural gas marketing business in Georgia and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

The electric operations segment is comprised of the electric operations of SCE&G, GENCO and Fuel Company, and is primarily engaged in the generation, transmission, distribution and sale of electricity in South Carolina. At December 31, 2013, SCE&G provided electricity to approximately 678,000 customers in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results for electric operations are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control growth in costs. Through 2013, the effect of weather on operating results was largely mitigated by the eWNA; however, the eWNA was discontinued pursuant to SCPSC order effective with the first billing cycle of January 2014. Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2013 was 10.25% for non-BLRA expenditures, and 11.0% for BLRA-related expenditures. As further described in Note 2 to the consolidated financial statements, SCE&G's allowed return on equity for non-BLRA expenditures was 10.7% prior to 2013. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electric prices and, therefore, the competitive position of electricity against other energy sources.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G's 2012 IRP identified six coal-fired units that SCE&G has subsequently retired or intends to retire by 2018, subject to future developments in environmental regulations, among other matters. These units had an aggregate generating capacity (2012 summer rating) of 730 MW. As of December 31, 2013, three of these units have been retired. For additional information, see Note 1 and Note 2 to the consolidated financial statements.

New Nuclear Construction

SCE&G is constructing two 1,250 MW (1,117 MW, net) nuclear generation units at the site of Summer Station. SCE&G will jointly own the New Units with Santee Cooper, and SCE&G will be responsible for the cost of and receive the output from the New Units in proportion to its share of ownership, with Santee Cooper responsible for and receiving the remaining share. SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement, SCE&G will acquire a one percent ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional two percent ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final two percent no later than the second anniversary of such commercial operation date. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete.

SCE&G expects Unit 2 to be placed in service in the fourth quarter of 2017 or the first quarter of 2018, with Unit 3's in-service date approximately 12 months later. SCE&G's share of the estimated cash outlays (future value, excluding AFC) for its current 55% ownership share totals approximately $5.4 billion for plant and related transmission infrastructure costs, which costs are projected based on historical one-year and five-year escalation rates as required by the SCPSC. In addition, under the terms of the agreement previously described, SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest.

Significant recent developments in new nuclear construction include the following:

- In the first quarter of 2013, initial pouring of the Unit 2 nuclear island basemat was completed. The basemat provides a foundation for the containment vessel, shield building and auxiliary building that make up the nuclear island. The Unit 3 nuclear island basemat was completed in the fourth quarter of 2013.

- In April 2013, the 500-ton CR-10 module was set on the Unit 2 basemat. CR-10 supports the containment vessel. Construction of Unit 3's CR-10 module is currently underway.

- In May 2013, the containment vessel bottom head for Unit 2 was put in place. The containment vessel will house numerous reactor system components, such as the reactor vessel, steam generator and pressurizer. Work continues in building containment vessel rings that will be placed on the containment vessel bottom head for Unit 2.

- In September 2013, the reactor vessel cavity for Unit 2 (CA-04 module) was placed in the containment vessel bottom head. The reactor vessel cavity will house the reactor vessel, which in turn will house the fuel assemblies. The reactor vessel for Unit 2 is on-site.

- Fabrication has begun for Unit 2's steam generator and refueling canal module (CA-01 module) that will be located inside the containment vessel.

- Ring 1 of the Unit 2 containment vessel is scheduled to be placed on the containment vessel bottom head in the second quarter 2014. Ring 2 is scheduled to be placed in the fourth quarter of 2014.

- While progress has been made with production, quality assurance and quality control issues, the schedule for fabrication of sub-modules at the contractor facility remains a focus area for the project.

- During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules. SCE&G anticipates that this revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

For additional information on these and other matters, see New Nuclear Construction Matters herein and Note 2 and Note 10 to the consolidated financial statements.

Environmental

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. The Company is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. New federal effluent limitation guidelines for steam electric generating units were published in the Federal Register on

June 7, 2013, and the ELG Rule is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020. Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014, and Congress is expected to consider further amendments to the CWA.

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 14, 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO.

The above environmental initiatives and other similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, the Company cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on the Company, if any. The Company believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The gas distribution segment, comprised of the local distribution operations of SCE&G and PSNC Energy, is primarily engaged in the purchase, transportation and sale of natural gas to retail customers in portions of South Carolina and North Carolina. At December 31, 2013 this segment provided natural gas to approximately 838,000 customers in areas covering 34,600 square miles.

Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control growth in costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25% for SCE&G and 10.60% for PSNC Energy.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact the Company’s ability to retain large commercial and industrial customers. In addition, the production of shale gas in the United States has resulted in significantly lower prices for this commodity, and such prices are expected to continue for the foreseeable future.

Retail Gas Marketing

SCANA Energy, a division of SEMI, comprises the retail gas marketing segment. This segment markets natural gas to approximately 454,000 customers throughout Georgia (as of December 31, 2013, and includes approximately 68,000 customers in its regulated division described below). SCANA Energy’s total customer base represents an approximate 30% share of the customers in Georgia’s deregulated natural gas market. SCANA Energy remains the second largest natural gas marketer in the state. SCANA Energy’s competitors include an affiliate of a large energy company with experience in Georgia’s energy market, as well as several electric membership cooperatives. SCANA Energy’s ability to maintain its market share depends on the prices it charges customers relative to the prices charged by its competitors, its ability to continue to provide high levels of customer service and other factors. In addition, SCANA Energy's operating results are highly sensitive to weather. This market has matured in the last decade, resulting in lower margins and enhanced competition for customers.

As Georgia’s regulated provider, SCANA Energy provides service at rates approved by the GPSC to low-income customers and to customers unable to obtain or maintain natural gas service from other marketers . SCANA Energy receives funding from Georgia's Universal Service Fund to offset some of the bad debt associated with the low-income group. In third quarter 2013, SCANA Energy’s contract to serve as Georgia’s regulated provider of natural gas was extended by the GPSC through August 31, 2015. SCANA Energy files financial and other information periodically with the GPSC, and such information is available at *www.psc.state.ga.us* (which is not intended as an active hyperlink; the information on the GPSC website is not part of this or any other report filed with the SEC).

SCANA Energy and certain of SCANA's other natural gas distribution and marketing segments maintain gas inventory and utilize forward contracts and other financial instruments, including commodity swaps and futures contracts, to manage their exposure to fluctuating commodity natural gas prices. See Note 6 to the consolidated financial statements. As a part of this risk management process, at any given time, a portion of SCANA's projected natural gas needs has been purchased or otherwise placed under contract. Since SCANA Energy operates in a competitive market, it may be unable to sustain its current levels of customers and/or pricing, thereby reducing expected margins and profitability. Further, there can be no assurance that Georgia's gas delivery regulatory framework will remain unchanged as dynamic market conditions evolve.

Energy Marketing

The divisions of SEMI excluding SCANA Energy comprise the energy marketing segment. This segment markets natural gas primarily in the southeast and provides energy-related risk management services to customers. The operating results for energy marketing are primarily influenced by customer demand for natural gas and the ability to control growth of costs. Demand for natural gas is primarily affected by the price of alternate fuels and customer growth. In addition, certain pipeline capacity available for Energy Marketing to serve industrial and other customers is dependent upon the market share held by SCANA Energy in the retail market.

RESULTS OF OPERATIONS

	2013	2012	2011
Basic earnings per share	$ 3.40	$ 3.20	$ 3.01
Diluted earnings per share	$ 3.39	$ 3.15	$ 2.97
Cash dividends declared (per share)	$ 2.03	$ 1.98	$ 1.94

2013 vs 2012 Basic earnings per share increased due to higher electric and gas margins. These margin increases were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes, dilution from additional shares outstanding and higher interest expense, as further described below.

2012 vs 2011 Basic earnings per share increased due to higher electric and gas margins and gains on sales of communications towers. These increases were partially offset by higher operating expenses, higher depreciation expense, higher property taxes, dilution from additional shares outstanding and higher interest expense, as further described below.

Diluted earnings per share figures give effect to dilutive potential common stock using the treasury stock method. See Note 1 to the consolidated financial statements.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 2,430.5	(0.9)%	$ 2,453.1	0.9 %	$ 2,432.2
Less: Fuel used in generation	751.0	(11.0)%	844.2	(8.5)%	922.5
Purchased power	43.0	53.0 %	28.1	46.4 %	19.2
Margin	$ 1,636.5	3.5 %	$ 1,580.8	6.1 %	$ 1,490.5

2013 vs 2012	Margin increased primarily due to base rate increases under the BLRA of $54.2 million and higher electric base rates of $67.3 million approved in the December 2012 rate order. Additionally, pursuant to accounting orders of the SCPSC, 2013's electric margin reflects downward adjustments of $50.1 million to revenue. Such adjustments are fully offset by the recognition within other income of gains realized upon the settlement of certain derivative interest rate contracts, which had been deferred as regulatory liabilities. See Note 2 to the consolidated financial statements.
2012 vs 2011	Margin increased primarily by $54.4 million due to an increase in retail electric base rates approved by the SCPSC under the BLRA, by $3.7 million due to customer growth and by $11.0 million due to the expiration of a decrement rider approved in the 2010 retail electric base rate case.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2013	Change	2012	Change	2011
Residential	7,571	—	7,571	(8.0)%	8,232
Commercial	7,205	(1.2)%	7,291	(1.4)%	7,397
Industrial	6,000	2.8 %	5,836	(1.7)%	5,938
Other	581	(0.9)%	586	2.4 %	572
Total retail sales	21,357	0.3 %	21,284	(3.9)%	22,139
Wholesale	955	(63.2)%	2,595	26.6 %	2,049
Total Sales	22,312	(6.6)%	23,879	(1.3)%	24,188

2013 vs 2012	Retail sales volume increased primarily due to customer growth and the effects of weather, partially offset by lower average use. The decrease in wholesale sales is primarily due to the expiration of two customer contracts.
2012 vs 2011	Retail sales volume decreased by 983 GWh primarily due to the effects of milder weather. The increase in wholesale sales is primarily due to higher contract utilization by a wholesale customer.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G and PSNC Energy. Gas Distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 942.6	23.2%	$ 765.0	(9.0)%	$ 840.4
Less: Gas purchased for resale	534.9	42.8%	374.6	(19.7)%	466.3
Margin	$ 407.7	4.4%	$ 390.4	4.4 %	$ 374.1

2013 vs 2012	Margin increased primarily due to the SCPSC-approved increase in base rates under the RSA which became effective with the first billing cycle of November 2012, as well as residential and commercial customer growth and increased industrial usage.
2012 vs 2011	Margin at SCE&G increased by $8.3 million due to the SCPSC-approved increases in retail gas base rates under the RSA which became effective with the first billing cycles of November 2011 and 2012. Margin at PSNC Energy increased by $5.1 million primarily due to residential and commercial customer growth and increased industrial sales due to the competitive price of gas versus alternate fuel sources.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2013	Change	2012	Change	2011
Residential	41,268	24.4%	33,161	(9.3)%	36,568
Commercial	28,181	12.7%	25,001	(3.0)%	25,772
Industrial	22,319	4.6%	21,340	13.6 %	18,782
Transportation gas	42,221	9.0%	38,736	13.4 %	34,152
Total	133,989	13.3%	118,238	2.6 %	115,274

2013 vs 2012 Total sales volumes increased primarily due to customer growth, increased industrial usage and the effects of weather.

2012 vs 2011 Residential and commercial sales volume decreased primarily due to milder weather. Industrial and transportation sales volumes increased due to the competitive price of gas versus alternate fuel sources.

Retail Gas Marketing

Retail Gas Marketing is comprised of SCANA Energy which operates in Georgia's natural gas market. Retail Gas Marketing revenues and net income were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 465.2	12.8%	$ 412.5	(13.8)%	$ 478.8
Net Income	23.8	*	10.5	(56.6)%	24.2

* Greater than 100%

2013 vs 2012 Changes in operating revenues and net income are due to higher demand in 2013 primarily as a result of milder weather in 2012.

2012 vs 2011 Reductions in operating revenues and net income were primarily due to milder weather and a decrease in the number of customers served under the regulated provider program in 2012.

Energy Marketing

Energy Marketing is comprised of the Company's nonregulated marketing operations, excluding SCANA Energy. Energy Marketing operating revenues and net income were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 818.5	22.3%	$ 669.0	(20.8)%	$ 844.9
Net Income	6.1	13.0%	5.4	22.7 %	4.4

2013 vs 2012 Operating revenues and net income increased due to higher industrial sales volume and higher market prices.

2012 vs 2011 Operating revenues decreased due to lower market prices. Net income increased due to higher consumption.

Other Operating Expenses

Other operating expenses were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Other operation and maintenance	$ 707.5	2.6%	$ 689.3	4.8%	$ 657.9
Depreciation and amortization	378.1	6.2%	356.1	2.8%	346.3
Other taxes	219.7	6.1%	207.1	3.1%	200.8

2013 vs 2012	Other operation and maintenance expenses increased by $16.7 million due to incremental expenses associated with the December 2012 SCPSC rate order and by $5.7 million due to higher electric generation, transmission and distribution expenses. These increases were partially offset by lower compensation costs of $10.1 million due to reduced headcount and lower incentive compensation accruals and by other general expenses. Depreciation and amortization expense increased $13.2 million due to the recognition of depreciation expense associated with the Wateree Station scrubber which was provided for in the December 2012 SCPSC rate order and due to other net plant additions. Other taxes increased primarily due to higher property taxes on net property additions.
2012 vs 2011	Other operation and maintenance expenses increased by $9.3 million due to higher generation, transmission and distribution expenses and by $25.0 million due to higher incentive compensation and other benefits. These increases were partially offset by $3.9 million due to lower customer service expenses, including bad debt expense, and by $1.6 million due to lower general expenses. Depreciation and amortization expense increased primarily due to net property additions. Other taxes increased primarily due to higher property taxes on net property additions.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on the Company's income statements and balance sheets as follows:

Millions of dollars	2013	Change	2012	Change	2011
Income Statement Impact:					
Employee benefit costs	$ 15.5	*	$ 4.0	53.8%	$ 2.6
Other expense	1.0	25.0 %	0.8	60.0%	0.5
Balance Sheet Impact:					
Increase in capital expenditures	7.2	9.1 %	6.6	69.2%	3.9
Component of amount receivable from Summer Station co-owner	2.5	13.6 %	2.2	83.3%	1.2
Increase in regulatory asset	5.5	(63.1)%	14.9	63.7%	9.1
Net periodic benefit cost	$ 31.7	11.2 %	$ 28.5	64.7%	$ 17.3

* Greater than 100%

Prior to July 15, 2010, the SCPSC allowed SCE&G to defer as a regulatory asset the amount of pension cost exceeding amounts included in rates for its retail electric and gas distribution regulated operations. In connection with the SCPSC's July 2010 electric rate order and November 2010 natural gas RSA order, SCE&G began deferring, as a regulatory asset, all pension cost related to retail electric and gas operations that otherwise would have been charged to expense. Effective in January 2013, in connection with the December 2012 rate order, SCE&G began amortizing previously deferred pension costs related to retail electric operations totaling approximately $63 million over approximately 30 years (see Note 2) and recovering current pension costs related to retail electric operations through a rate rider that may be adjusted annually. Similarly, in connection with the October 2013 RSA order, deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates (see Note 2 to the consolidated financial statements). In 2013, such amortizations totaled approximately $2.0 million for electric operations and $0.2 million for gas operations.

Other Income (Expense)

Other income (expense) includes the results of certain incidental activities of regulated subsidiaries and the activities of certain non-regulated subsidiaries. Components of other income (expense) were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Other income	$ 100.3	71.2%	$ 58.6	12.3%	$ 52.2
Other expense	(45.5)	8.1%	(42.1)	5.3%	(40.0)
Total	$ 54.8	*	$ 16.5	35.2%	$ 12.2

* Greater than 100%

2013 vs 2012	Changes in other income were primarily due to the recognition, pursuant to SCPSC accounting orders, of $50.1 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as regulatory liabilities. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income. This increase in other income was partially offset by the sales of communications towers that were recorded in 2012 by a non-regulated subsidiary. Changes in other expense were not significant.
2012 vs 2011	Changes in other income were primarily due to the sales of communications towers in 2012 by a non-regulated subsidiary. Changes in other expense were not significant.

AFC

AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. The Company includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. AFC represented approximately 5.8% of income before income taxes in 2013, 5.4% in 2012 and 3.9% in 2011.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Interest on long-term debt, net	$ 292.8	0.9 %	$ 290.2	4.9 %	$ 276.6
Other interest expense	4.6	(11.5)%	5.2	(32.5)%	7.7
Total	$ 297.4	0.7 %	$ 295.4	3.9 %	$ 284.3

Interest on long-term debt increased in each year primarily due to increased long-term borrowings. Other interest expense decreased in 2013 and 2012, primarily due to reductions in principal balances outstanding on short-term debt over the respective prior year and also decreased due to the reversal in 2012 of interest which had been accrued in 2011 related to a tax uncertainty that was resolved (see Note 5 to the consolidated financial statements).

Income Taxes

Income tax expense increased in 2013 over 2012 and in 2012 over 2011 primarily due to increases in income before taxes. The increase in the effective tax rate in 2013 is principally attributable to lower recognition of EIZ Credits upon the completion of the amortization of certain such credits in 2012.

LIQUIDITY AND CAPITAL RESOURCES

The Company anticipates that its contractual cash obligations will be met through internally generated funds, the incurrence of additional short- and long-term indebtedness and sales of equity securities. The Company expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt. The Company's ratio of earnings to fixed charges for the year ended December 31, 2013 was 3.22.

Cash requirements for SCANA's regulated subsidiaries arise primarily from their operational needs, funding their construction programs and payment of dividends to SCANA. The ability of the regulated subsidiaries to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental regulations, will depend on their ability to attract the necessary financial capital on reasonable terms. Regulated subsidiaries recover the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and these subsidiaries continue their ongoing construction programs, rate increases will be sought. The future financial position and results of operations of the regulated subsidiaries will be affected by their ability to obtain adequate and timely rate and other regulatory relief.

The Company obtains equity from SCANA's stock plans. Shares of SCANA common stock are acquired on behalf of participants in SCANA's Investor Plus Plan and Stock Purchase-Savings Plan through the original issuance of shares, rather than being purchased on the open market. This provided approximately $99 million of additional equity during 2013. Due primarily to new nuclear construction plans, the Company anticipates keeping this strategy in place for the foreseeable future.
In addition, on March 5, 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196 million.

SCANA's leverage ratio of long- and short-term debt to capital was approximately 56% at December 31, 2013. SCANA has publicly announced its desire to maintain its leverage ratio between 54% and 57%, but SCANA's ability to do so depends on a number of factors. In the future, if SCANA is not able to maintain its leverage ratio within the desired range, the Company's debt ratings may be affected, it may be required to pay higher interest rates on its long- and short-term indebtedness, and its access to the capital markets may be limited.

Capital Expenditures

Cash outlays for property additions and construction expenditures, including nuclear fuel, net of AFC, were $1.1 billion in 2013 and are estimated to be $1.7 billion in 2014.

The Company's current estimates of its capital expenditures for construction and nuclear fuel for 2014-2016, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	2014	2015	2016
SCE&G - Normal			
Generation	$ 136	$ 145	$ 112
Transmission & Distribution	230	280	258
Other	14	25	19
Gas	50	51	73
Common	9	7	10
Total SCE&G - Normal	439	508	472
PSNC Energy	128	111	87
Other	79	58	42
Total Normal	646	677	601
New Nuclear (including transmission)	950	905	667
Cash Requirements for Construction	1,596	1,582	1,268
Nuclear Fuel	67	30	147
Total Estimated Capital Expenditures	$ 1,663	$ 1,612	$ 1,415

Estimated capital expenditures for Nuclear Fuel in 2016 include approximately $53 million, which is SCE&G's share of nuclear fuel it acquired in 2013. This fuel has been recorded in utility plant and the corresponding liability has been recorded in long-term debt on the consolidated balance sheet.

The Company's contractual cash obligations as of December 31, 2013 are summarized as follows:

Contractual Cash Obligations

	Payments due by periods				
Millions of dollars	**Total**	**Less than 1 year**	**1 - 3 years**	**4 - 5 years**	**More than 5 years**
Long- and short-term debt, including interest	$ 10,954	$ 713	$ 885	$ 1,243	$ 8,113
Capital leases	17	3	10	2	2
Operating leases	41	7	12	3	19
Purchase obligations	3,938	2,067	1,648	221	2
Other commercial commitments	4,397	886	1,700	998	813
Total	$ 19,347	$ 3,676	$ 4,255	$ 2,467	$ 8,949

Included in the table above in purchase obligations is SCE&G's portion of a contractual agreement for the design and construction of the New Units at the Summer Station site. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent of the cost and receiving 55 percent of the output, and the other joint owner (or owners) the remaining 45 percent. Also included in the table above is the estimated $500 million SCE&G expects it will cost to acquire an additional 5% ownership in the New Units as further described in New Nuclear Construction Matters.

Also included in purchase obligations are customary purchase orders under which the Company has the option to utilize certain vendors without the obligation to do so. The Company may terminate such arrangements without penalty.

Other commercial commitments includes estimated obligations under forward contracts for natural gas purchases. Forward contracts for natural gas purchases include customary "make-whole" or default provisions, but are not considered to be "take-or-pay" contracts. Certain of these contracts relate to regulated businesses; therefore, the effects of such contracts on fuel costs are reflected in electric or gas rates. Other commercial commitments also includes a "take-and-pay" contract for natural gas which expires in 2019 and estimated obligations for coal and nuclear fuel purchases.

In addition to the contractual cash obligations above, the Company sponsors a noncontributory defined benefit pension plan and an unfunded health care and life insurance benefit plan for retirees. The pension plan is adequately funded under current regulations, and no significant contributions are anticipated for the foreseeable future. Cash payments under the postretirement health care and life insurance benefit plan were $9.2 million in 2013, and such annual payments are expected to be the same or increase up to $14.7 million in the future.

In addition, the Company is party to certain NYMEX natural gas futures contracts for which any unfavorable market movements are funded in cash. These derivatives are accounted for as cash flow hedges and their effects are reflected within other comprehensive income until the anticipated sales transactions occur. See further discussion at Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK. At December 31, 2013, the Company had posted $6.4 million in cash collateral for such contracts. In addition, the Company had posted $20.3 million in cash collateral related to interest rate derivative contracts.

The Company also has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional asset retirement obligations that are not listed in the contractual cash obligations table. See Notes 1 and 10 to the consolidated financial statements.

Financing Limits and Related Matters

The Company's issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including state public service commissions and FERC. Financing programs currently utilized by the Company follow.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million.

GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $150 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2014.

In October 2013, the Company's existing committed LOCs were extended by one year. As a result, at December 31, 2013 SCANA, SCE&G (including Fuel Company) and PSNC Energy were parties to five-year credit agreements in the amounts of $300 million, $1.2 billion, of which $500 million relates to Fuel Company, and $100 million, respectively, which expire in October 2018. In addition, at December 31, 2013 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

As of December 31, 2013, the Company had no outstanding borrowings under its $1.8 billion credit facilities, had approximately $376 million in commercial paper borrowings outstanding, was obligated under $3.3 million in LOC supported letters of credit, and held approximately $136 million in cash and temporary investments. The Company regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2013 were approximately $463 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2013, the Company’s long-term debt portfolio has a weighted average maturity of approximately 18 years and bears an average cost of 5.74%. Substantially all of the Company's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, the Company rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

The Company’s articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCANA’s junior subordinated indenture (relating to the hereinafter defined Hybrids), SCE&G’s bond indenture (relating to the hereinafter defined Bonds) and PSNC Energy’s note purchase and debenture purchase agreements each contain provisions that, under certain circumstances which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2013, approximately $63.1 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

SCANA Corporation

SCANA has an indenture which permits the issuance of unsecured debt securities from time to time including its medium-term notes. This indenture contains no specific limit on the amount of unsecured debt securities which may be issued.

SCANA has outstanding $150 million of enhanced junior subordinated notes (Hybrids) which bear interest at 7.70% and mature on January 30, 2065, subject to extension to January 30, 2080. Because their structure and terms are characteristic of both debt instruments and equity securities, credit rating agencies consider securities like the Hybrids to be hybrid debt instruments and give some equity credit to the issuers of such securities for purposes of computing leverage ratios of debt to capital. The Hybrids are only subject to redemption at SCANA’s option and may be redeemed at any time, although the redemption prices payable by SCANA differ depending on the timing of the redemption and the circumstances (if any) giving rise thereto. SCANA may redeem the Hybrids on or after January 30, 2015, without payment of a make-whole amount.

In connection with the Hybrids, SCANA executed an RCC in favor of the holders of certain designated debt (referred to as “covered debt”). Under the terms of the RCC, SCANA agreed not to redeem or repurchase all or part of the Hybrids prior to the termination date of the RCC, unless it uses the proceeds of certain qualifying securities sold to non-affiliates within 180 days prior to the redemption or repurchase date. The proceeds SCANA receives from such qualifying securities, adjusted by a predetermined factor, must exceed the redemption or repurchase price of the Hybrids. Qualifying securities include common stock, and other securities that generally rank equal to or junior to the Hybrids and include distribution, deferral and long-dated maturity features similar to the Hybrids. For purposes of the RCC, non-affiliates include (but are not limited to) individuals enrolled in SCANA’s dividend reinvestment plan, direct stock purchase plan and employee benefit plans.

The RCC is scheduled to terminate on the earliest to occur of the following: (a) January 30, 2035 (or later, if the maturity date of the Hybrids is extended), (b) the date on which SCANA no longer has any eligible debt which ranks senior in right of payment to the Hybrids, (c) the date on which the holders of at least a majority in principal amount of “covered debt” agree to the termination thereof or (d) the date on which the Hybrids are accelerated following an event of default with respect thereto. SCANA's $250 million in Medium Term Notes due April 1, 2020 are designated as "covered debt" under the RCC.

South Carolina Electric & Gas Company

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2013, the Bond Ratio was 5.28.

Financing Activities

During 2013 there were net cash outflows related to financing activities of approximately $40 million primarily due to repayment of short- and long-term debt and payment of dividends, partially offset by the issuance of common stock and long-term debt.

In June 2013, SCE&G issued $400 million of 4.60% first mortgage bonds due June 15, 2043. Proceeds from this sale were used to pay at maturity $150 million of its 7.125% first mortgage bonds due June 15, 2013, to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In March 2013, SCE&G entered into a contract for the purchase of nuclear fuel totaling $100 million and payable in 2016.

On March 5, 2013, SCANA settled all forward sales contracts related to 6.6 million shares of its common stock, resulting in net proceeds of approximately $196 million.

In January 2013, JEDA issued for the benefit of SCE&G $39.5 million of 4.0% tax-exempt industrial revenue bonds due February 1, 2028, and $14.7 million of 3.625% tax-exempt industrial revenue bonds due February 1, 2033. Proceeds from these sales were loaned by JEDA to SCE&G and, together with other available funds, were used to redeem prior to maturity $56.9 million of 5.2% industrial revenue bonds due November 1, 2027.

In November 2012, SCE&G repaid at maturity $4.4 million of 4.2% tax-exempt industrial revenue bonds, and repaid prior to maturity $29.2 million of 5.45% tax-exempt industrial revenue bonds due November 1, 2032.

In July 2012, SCE&G issued $250 million of 4.35% first mortgage bonds due February 1, 2042 (issued at a premium with a yield of 3.86%), which constituted a reopening of the prior offering of $250 million of 4.35% first mortgage bonds which were issued in January 2012. Proceeds from these sales were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures and for general corporate purposes.

In January 2012, SCANA issued $250 million of 4.125% medium term notes due February 1, 2022. Proceeds from the sale were used by SCANA to retire $250 million of its 6.25% medium term notes due February 1, 2012.

Investing Activities

The Company paid approximately $6 million, net, through the third quarter of 2013 to settle interest rate derivative contracts upon the issuance of long-term debt for contracts that had been designated as hedges.

In addition, during the fourth quarter of 2013, the Company received approximately $120 million upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt. Pursuant to SCPSC accounting orders, $50.1 million of such gains were recognized within other income, with such gain recognition being fully offset by downward adjustments to revenues reflected within electric margin.

For additional information, see Note 4 to the consolidated financial statements.

In February 2014, SCANA increased the quarterly cash dividend rate on SCANA common stock to $.525 per share, an increase of approximately 3.5% from the prior declared dividend. The next quarterly dividend is payable April 1, 2014 to shareholders of record on March 10, 2014.

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act included 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 and 50% bonus depreciation for property placed in service for 2012. The American Taxpayer Relief Act of 2012 extended the 50% bonus depreciation for property placed in service in 2013. These incentives, along with certain other deductions, have had a positive impact on the cash flows of the Company.

ENVIRONMENTAL MATTERS

The Company's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. Compliance with these environmental requirements involves significant capital and operating costs, which the Company expects to recover through existing ratemaking provisions.

For the three years ended December 31, 2013, the Company's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $46.1 million. In addition, the Company made expenditures to operate and maintain environmental control equipment at its fossil plants of $9.2 million in 2013, $10.2 million in 2012 and $7.9 million during 2011, which are included in “Other operation and maintenance” expense, and made expenditures to handle waste ash of $3.2 million in 2013, $7.9 million in 2012 and $8.7 million in 2011, which are included in “Fuel used in electric generation.” In addition, included within “Other operation and maintenance” expense is an annual amortization of $1.4 million in each of 2013, 2012 and 2011 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for the Company are $9.5 million for 2014 and $82.5 million for the four-year period 2015-2018. These expenditures are included in the Company's Estimated Capital Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

At the state level, no significant environmental legislation that would affect the Company's operations advanced during 2013. The Company cannot predict whether such legislation will be introduced or enacted in 2014, or if new regulations or changes to existing regulations at the state level will be implemented in the coming year. Several regulatory initiatives at the federal level did advance in 2013 and more are expected to advance in 2014 as described below.

Air Quality

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, SCANA, SCE&G and GENCO are subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. The Company cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact the Company, and the following discussion should not be considered all-inclusive.

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. The Company is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015. The Company also cannot predict when rules will become final for existing units, if at all, or what conditions they may impose on the Company, if any. The Company expects that any costs incurred to comply with GHG emission requirements will be recoverable through rates.

From a regulatory perspective, SCANA, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

In 2005, the EPA issued the CAIR, which required the District of Columbia and 28 states to reduce nitrogen oxide and sulfur dioxide emissions in order to attain mandated state levels. CAIR set emission limits to be met in two phases beginning in 2009 and 2015, respectively, for nitrogen oxide and beginning in 2010 and 2015, respectively, for sulfur dioxide. SCE&G and GENCO determined that additional air quality controls would be needed to meet the CAIR requirements. On July 6, 2011 the EPA issued the CSAPR. This rule replaced CAIR and the Clean Air Transport Rule proposed in July 2010 and is aimed at addressing power plant emissions that may contribute to air pollution in other states. CSAPR requires states in the eastern United States to reduce power plant emissions, specifically sulfur dioxide and nitrogen oxide. On December 30, 2011, the United States Court of Appeals for the District of Columbia issued an order staying CSAPR and reinstating CAIR pending resolution of an appeal of CSAPR. On August 21, 2012, the Court of Appeals vacated CSAPR and left CAIR in place. The EPA's petition for rehearing of the Court of Appeals' order was denied. In June 2013 the U.S. Supreme Court agreed to review the Court of Appeals' decision and oral arguments were held on December 10, 2013. A decision is still pending. Air quality control installations that SCE&G and GENCO have already completed have allowed the Company to comply with the reinstated CAIR and will also allow it to comply with CSAPR, if reinstated. The Company will continue to pursue strategies to comply with all applicable environmental regulations. Any costs incurred to comply with such regulations are expected to be recoverable through rates.

In April 2012, the EPA's rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for facilities to meet the standards, and the Company's evaluation of the rule is ongoing. The Company's decision in 2012 to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in the Company's compliance with the EPA's rule. Any costs incurred to comply with this rule or other rules issued by the EPA in the future are expected to be recoverable through rates.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though the Company cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

Physical effects associated with climate changes could include the impact of possible changes in weather patterns, such as storm frequency and intensity, and the resultant potential damage to the Company's electric system, as well as impacts on employees and customers and on the Company's supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. In addition, SCE&G has collected funds from customers for its storm damage reserve (see Note 2 to the consolidated financial statements). As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations in advance of such storms, all in order to allow the Company to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Water Quality

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility’s NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020.

Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014, The Company is conducting studies and is developing or implementing compliance plans for these initiatives. Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones. These provisions, if passed, could have a material impact on the financial condition, results of operations and cash flows of the Company. The Company believes that any additional costs imposed by such regulations would be recoverable through rates.

Hazardous and Solid Wastes

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO. While the Company cannot predict how extensive the regulations will be, the Company believes that any additional costs imposed by such regulations would be recoverable through rates.

The final CCR rule may require the closure of ash ponds. SCE&G has three generating facilities that have employed ash storage ponds, and all of these ponds have either been closed after all ash was removed or are part of an ash pond closure project that includes complete removal of the ash prior to closure. The electric generating facilities which continue to be coal-fired have dry ash handling, and the ash ponds undergoing closure have a detailed dam safety inspection conducted at least quarterly.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2013, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017, and has commenced construction of a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. In addition, the states of South Carolina and North Carolina have similar laws. The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify the Company that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates. The Company has assessed the following matters:

Electric Operations

SCE&G maintains an environmental assessment program to identify and evaluate its current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. At December 31, 2013, such regulatory assets totaled approximately $1.2 million. Other environmental costs are recorded to expense as incurred.

Gas Distribution

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC. SCE&G anticipates that major remediation activities at these sites will continue until 2017 and will cost an additional $20.2 million. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2013, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $36.7 million and are included in regulatory assets.

PSNC Energy is responsible for environmental clean-up at five sites in North Carolina on which MGP residuals are present or suspected. PSNC Energy's actual remediation costs for these sites will depend on a number of factors, such as actual site conditions, third-party claims and recoveries from other PRPs. PSNC Energy has recorded a liability and associated regulatory asset of approximately $2.8 million, the estimated remaining liability at December 31, 2013. PSNC Energy expects to recover through rates any cost allocable to PSNC Energy arising from the remediation of these sites.

REGULATORY MATTERS

SCANA and its subsidiaries are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCANA	The SEC as to the issuance of certain securities and other matters and the FERC as to certain acquisitions and other matters.
SCANA and all subsidiaries	The CFTC to the extent they transact swaps as defined in Dodd-Frank.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions and other matters; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety, antitrust considerations and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the sale of electric energy at wholesale for resale, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to issuance of short-term borrowings, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.
PSNC Energy	The NCUC as to gas rates, service, issuance of securities (other than notes with a maturity of two years or less or renewals of notes with a maturity of six years or less), accounting and other matters, and the SEC as to the issuance of certain securities.
SCE&G, PSNC Energy and CGT	The PHMSA and the DOT as to integrity management requirements for gas distribution pipeline systems and natural gas transmission systems, respectively.
CGT	The FERC as to transportation rates, service, accounting and other matters.
SCANA Energy	The GPSC through its certification as a natural gas marketer in Georgia and specifically as to retail prices for customers served under its regulated provider contract.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of the Company's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Utility Regulation

SCANA's regulated utilities record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, the Company may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of the Company's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of the Company's regulatory assets and liabilities, including those associated with the Company's environmental program.

The Company's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, the Company could be required to write down its investment in those assets. The Company cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect the Company's results of operations in the period in which they would be recorded. As of December 31, 2013, the Company's net investments in fossil/hydro and nuclear generation assets were approximately $2.4 billion and $2.9 billion, respectively.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers of the Company's utilities and retail gas operations are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, the Company records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization or other regulatory provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. Accounts receivable included unbilled revenues of $183.1 million at December 31, 2013 and $189.8 million at December 31, 2012, compared to total revenues of $4.5 billion and $4.2 billion for the years 2013 and 2012, respectively.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G's accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and timing of cash flows. Changes in any of these estimates could significantly impact the Company's financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures on an after-tax basis.

Asset Retirement Obligations

The Company accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from their acquisition, construction, development and normal operation in accordance with applicable accounting guidance. The obligations are recognized at present value in the period in which they are incurred, and associated asset retirement costs are capitalized as a part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to the Company's regulated utility operations, their recognition has no significant impact on results of operations. As of December 31, 2013, the Company has recorded AROs of $191 million for nuclear plant decommissioning (as discussed above) and AROs of $385 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded in accordance with the relevant accounting guidance are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for the utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

The Company recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. The Company's plan is adequately funded under current regulations. Accounting guidance requires the use of several assumptions, the selection of which has an impact on the resulting pension cost recorded. Among the more sensitive assumptions are those surrounding discount rates and expected returns on assets. Net pension cost of $31.7 million recorded in 2013 reflects the use of a 4.10% discount rate prior to re-measurement on September 1, 2013 and a 5.07% discount rate after re-measurement, derived using a cash flow matching technique, and an assumed 8.0% long-term rate of return on plan assets. The re-measurement occurred in connection with a plan amendment and related curtailment, which is further described below. The Company believes that these assumptions were, and that the resulting pension cost amount was, reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2013 would have increased the Company's pension cost by $1.2 million. Further, had the assumed long-term rate of return on assets been 7.75%, the Company's pension cost for 2013 would have increased by $1.9 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

The Company determines the fair value of a large majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, the Company evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2013, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 7.5%, 6.3%, 8.8% and 9.7%, respectively. The 2013 expected long-term rate of return of 8.00% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2014, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.4%, 6.0%, 8.3% and 9.3%, respectively. For 2014, the expected rate of return is 8.00%.

As of December 31, 2013, 2012, and 2011, approximately $5.5 million, $14.9 million and $9.0 million, respectively, of pension expense was deferred pursuant to regulatory orders. As part of a December 2012 SCPSC rate order, cumulative previously deferred pension costs related to electric operations of approximately $63 million is being amortized over approximately 30 years, and starting in January 2013 current pension expense for electric operations is being recovered through a pension cost rider. Similarly, in connection with the October 2013 RSA order, previously deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates.

In the third quarter of 2013, the pension plan was amended such that pension benefits will no longer be offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, the Company recorded a curtailment charge due to the accelerated amortization of prior service cost. Approximately $6.5 million of the curtailment charge was applicable to regulated operations and was deferred within regulatory assets. The Company is recovering such deferred amounts through existing regulatory orders.

The closure of the plan to entrants after December 31, 2013 and the cessation of benefit accruals in 2023 are expected to further lessen the significance of pension costs and the criticality of the related estimates to the Company's financial statements. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

The Company accounts for the cost of its postretirement medical and life insurance benefit plans in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. The Company used a discount rate of 4.19%, derived using a cash flow matching technique, and recorded a net cost of $21.3 million for 2013. Had the selected discount rate been 3.94% (25 basis points lower than the discount rate referenced above), the expense for 2013 would have been $0.6 million higher. Because the plan provisions include "caps" on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

NEW NUCLEAR CONSTRUCTION MATTERS

SCE&G is constructing two 1,250 MW (1,117 MW, net) nuclear generation units at the site of Summer Station. SCE&G will jointly own the New Units with Santee Cooper, and SCE&G will be responsible for the cost of and receive the output from the New Units in proportion to its share of ownership, with Santee Cooper responsible for and receiving the remaining share. SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement, SCE&G will acquire a one percent ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional two percent ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final two percent no later than the second anniversary of such commercial operation date. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete.

It is expected that Unit 2 will be placed in service in the fourth quarter of 2017 or the first quarter of 2018, with Unit 3's in-service date approximately 12 months later. SCE&G's share of the estimated cash outlays (future value, excluding AFC) for its current 55% ownership share totals approximately $5.4 billion for plant and related transmission infrastructure costs, which costs are projected based on historical one-year and five-year escalation rates as required by the SCPSC. In addition, under the terms of the agreement previously described, SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments would be reflected in revised rates filings under the BLRA.

In November 2012, the SCPSC approved an updated construction schedule and additional updated capital costs of $278 million (SCE&G's portion in 2007 dollars). The November 2012 order approved additional identifiable capital costs of approximately $1 million (SCE&G's portion in 2007 dollars) related to new federal healthcare laws, information security measures, and certain minor design modifications; approximately $8 million (SCE&G's portion in 2007 dollars) related to transmission infrastructure; and approximately $132 million (SCE&G's portion in 2007 dollars) related to additional labor for the oversight of the New Units during construction and for preparing to operate the New Units, and facilities and information technology systems required to support the New Units and their personnel. In addition, the order approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve claims for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. Thereafter, two parties filed separate petitions requesting that the SCPSC reconsider its November 2012 order. On December 12, 2012, the SCPSC denied both petitions. In March 2013, both parties appealed the SCPSC's order to the South Carolina Supreme Court. SCE&G is unable to predict the outcome of these appeals.

The Consortium has experienced delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules are a focus area of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01 are considered critical path items for both New Units. All sub-modules for CA20 have been received on site and its fabrication is underway. CA20 is expected to be ready for placement on the nuclear island of the first New Unit in the first quarter of 2014. In addition, the delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of the first New Unit during the third quarter of 2014. With this schedule, the Consortium continues to indicate that the substantial completion of the first New Unit is expected to be late 2017 or the first quarter of 2018 and that the substantial completion of the second New Unit is expected to be approximately twelve months after that of the first New Unit. The substantial completion dates currently approved by the SCPSC for the first and second New Units are March 15, 2017 and May 15, 2018, respectively. The SCPSC has also approved an 18-month contingency period beyond each of these dates. The preliminary expected new substantial completion dates are within the contingency periods. SCE&G cannot predict with certainty the extent to which the issue with the sub-modules or the delays in the substantial completion of the New Units will result in increased project costs. However, the preliminary estimate of the delay-related costs associated with SCE&G's 55% share of the New Units is approximately $200 million. SCE&G has not accepted responsibility for any of these delay-related costs and expects to have further discussions with the Consortium regarding such responsibility. Additionally, the EPC Contract provides for liquidated damages in the event of a delay in the completion of the New Units, which will also be included in discussions with the Consortium. SCE&G believes its responsibility for any portion of the $200 million estimate should ultimately be substantially less, once all of the relevant factors are considered.

In addition to the above-described project delays, SCE&G is also aware of financial difficulties at a supplier responsible for certain significant components of the project. The Consortium is monitoring the potential for disruptions in such equipment fabrication and possible responses. Any disruptions could impact the project's schedule or costs, and such impacts could be material.

The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve issues that arise during the course of constructing a project of this magnitude. During the course of activities under the EPC Contract, issues have materialized that impact project budget and schedule. Claims specifically relating to COL delays, design modifications of the shield building and certain pre-fabricated modules for the New Units and unanticipated rock conditions at the site resulted in assertions of contractual entitlement to recover additional costs to be incurred. The resolution of these specific claims is discussed in Note 2 to the consolidated financial statements. SCE&G expects to resolve any disputes that arise in the future, including any which may arise with respect to the delay-related costs discussed above, through both the informal and formal procedures and anticipates that any additional costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedule and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement schedules, construction work crew assignments, and other items. The result will be a revised fully integrated construction schedule that will provide for detailed and itemized information on individual budget and cost categories, cost estimates at completion for all non-firm and fixed scopes of work, and the timing of specific construction activities and cash flow requirements. SCE&G anticipates that this revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. These conditions and requirements are responsive to the NRC's Near-Term Task Force report titled “Recommendations for Enhancing Reactor Safety in the 21st Century.” This report was prepared in the wake of the March 2011 earthquake-generated tsunami, which severely damaged several nuclear generating units and their back-up cooling systems in Japan. SCE&G continues to evaluate the impact of these conditions and requirements that may be imposed on the construction and operation of the New Units, and SCE&G, pursuant to the license condition, prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. SCE&G cannot predict what additional regulatory or other outcomes may be implemented in the United States, or how such initiatives would impact SCE&G's existing Summer Station or the construction or operation of the New Units.

Subject to a national megawatt capacity limitation, the electricity to be produced by the New Units (advanced nuclear units, as defined) is expected to qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code. Following the pouring of safety-related concrete for each of the New Units’ reactor buildings (March 2013 for the first New Unit and November 2013 for the second New Unit), SCE&G has applied to the IRS for its allocations of such national megawatt capacity limitation. The IRS will forward the applications to the DOE for appropriate certification. Under current provisions of the Internal Revenue Code and based on SCE&G's current 55% ownership and other assumptions regarding volumes of electricity to be generated by the New Units, the aggregate production tax credits for which SCE&G qualifies could exceed $1.3 billion over the eight year period following each of the New Units' in-service dates. In January 2014, SCE&G amended its application to include the additional 5% interest in the New Units that it expects to acquire. Additional production tax credits related to the 5% interest could total as much as $125 million.

OTHER MATTERS

Financial Regulatory Reform

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. The Company has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. The Company is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

Off-Balance Sheet Transactions

Although SCANA invests in securities and business ventures, it does not hold significant investments in unconsolidated special purpose entities. SCANA does not engage in off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment and rail cars.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments held by the Company described below are held for purposes other than trading.

Interest Rate Risk

The tables below provides information about long-term debt issued by the Company and other financial instruments that are sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average interest rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

December 31, 2013	**Expected Maturity Date**							
Millions of dollars	**2014**	**2015**	**2016**	**2017**	**2018**	**Thereafter**	**Total**	**Fair Value**
Long-Term Debt:								
Fixed Rate ($)	46.7	10.8	109.6	8.7	717.9	4,386.5	5,280.2	5,753.3
Average Fixed Interest Rate (%)	4.83	4.72	1.14	4.84	5.95	5.43	5.40	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	138.2	160.2	154.4
Average Variable Interest Rate (%)	0.94	0.94	0.94	0.94	0.94	0.53	0.59	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	604.4	654.4	4.4	4.4	4.4	141.8	1,413.8	13.0
Average Pay Interest Rate (%)	3.97	4.17	6.17	6.17	6.17	4.72	4.16	—
Average Receive Interest Rate (%)	0.25	0.25	0.94	0.94	0.94	0.49	0.28	—

December 31, 2012	**Expected Maturity Date**							
Millions of dollars	**2013**	**2014**	**2015**	**2016**	**2017**	**Thereafter**	**Total**	**Fair Value**
Long-Term Debt:								
Fixed Rate ($)	162.0	46.1	9.8	8.6	7.7	4,706.0	4,940.2	5,941.4
Average Fixed Interest Rate (%)	6.96	4.86	4.92	5.03	5.12	5.59	5.63	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	142.6	164.6	157.5
Average Variable Interest Rate (%)	1.01	1.01	1.01	1.01	1.01	0.61	0.66	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	604.4	304.4	4.4	4.4	4.4	146.2	1,068.2	(33.6)
Average Pay Interest Rate (%)	3.04	2.53	6.17	6.17	6.17	4.76	3.17	—
Average Receive Interest Rate (%)	0.31	0.32	1.01	1.01	1.01	0.58	0.36	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

The above tables exclude long-term debt of $3 million at December 31, 2013 and $9 million at December 31, 2012, which amounts do not have a stated interest rate associated with them.

For further discussion of the Company's long-term debt and interest rate derivatives, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

Commodity Price Risk

The following tables provide information about the Company's financial instruments that are sensitive to changes in natural gas prices. Weighted average settlement prices are per 10,000 MMBTU. Fair value represents quoted market prices.

Expected Maturity:

Futures Contracts

(b) Millions of dollars

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. See Note 6 to the consolidated financial statements. The information above includes those financial positions of Energy Marketing and PSNC Energy.

PSNC Energy utilizes futures, options and swaps to hedge gas purchasing activities. PSNC Energy's tariffs include a provision for the recovery of actual gas costs incurred. PSNC Energy defers premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program for subsequent recovery from customers.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2013 and 2012, and the related consolidated statements of income, comprehensive income, cash flows, and changes in common equity for each of the three years in the period ended December 31, 2013. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control-Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 28, 2014 expressed an unqualified opinion on the Company's internal control over financial reporting.

Dividends declared per share of common stock were $2.03, $1.98 and $1.94 for 2013, 2012 and 2011, respectively.

See Notes to Consolidated Financial Statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCANA, a South Carolina corporation, is a holding company. The Company engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina and in the purchase, sale and transportation of natural gas to wholesale and retail customers in South Carolina, North Carolina and Georgia. The Company also conducts other energy-related business and provides fiber optic communications in South Carolina.

The accompanying consolidated financial statements reflect the accounts of SCANA and the following wholly-owned subsidiaries.

Regulated businesses	Nonregulated businesses
South Carolina Electric & Gas Company	SCANA Energy Marketing, Inc.
South Carolina Fuel Company, Inc.	SCANA Communications, Inc.
South Carolina Generating Company, Inc.	ServiceCare, Inc.
Public Service Company of North Carolina, Incorporated	SCANA Services, Inc.
Carolina Gas Transmission Corporation	SCANA Corporate Security Services, Inc.

The Company reports certain investments using the cost or equity method of accounting, as appropriate. Intercompany balances and transactions have been eliminated in consolidation, with the exception of profits on intercompany sales to regulated affiliates if the sales price is reasonable and the future recovery of the sales price through the rate-making process is probable, as permitted by accounting guidance.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Utility Plant

Utility plant is stated substantially at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset's life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. The Company's regulated subsidiaries calculated AFC using average composite rates of 6.9% for 2013, 6.3% for 2012 and 4.7% for 2011. These rates do not exceed the maximum rates allowed in the various regulatory jurisdictions. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

The Company records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. The composite weighted average depreciation rates for utility plant assets were as follows:

	2013	2012	2011
SCE&G	2.96%	2.93%	2.92%
GENCO	2.66%	2.66%	2.69%
CGT	2.19%	2.09%	2.00%
PSNC Energy	3.01%	3.01%	3.05%
Aggregate of Above	2.93%	2.90%	2.90%

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in "Fuel used in electric generation" and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2013		2012	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.1 billion	—	$ 1.1 billion	—
Accumulated depreciation	$566.9 million	—	$557.0 million	—
Construction work in progress	$127.1 million	$2.3 billion	$113.6 million	$1.8 billion

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's share of the estimated cash outlays (future value, excluding AFC) totals approximately $5.4 billion for plant and related transmission infrastructure costs, and is projected based on historical one-year and five-year escalation rates as required by the SCPSC. For a discussion of when the New Units are expected to be placed in service, and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $75.6 million at December 31, 2013 and $92.9 million at December 31, 2012.

Plant to be Retired

As previously disclosed, in 2012 SCE&G identified a total of six coal-fired units that it intends to retire by 2018, subject to future developments in environmental regulations, among other matters. These units had an aggregate generating capacity (summer 2012) of 730 MW. As of December 31, 2013, three of these units had been retired and their net carrying value is recorded in regulatory assets (see Note 2). The net carrying value of the remaining units is identified as Plant to be Retired, Net in the consolidated financial statements. SCE&G plans to request recovery of and a return on the net carrying value of these remaining units in future rate proceedings in connection with their retirement, and expects that such deferred amounts will be recovered through rates. In the meantime, these units remain in rate base, and SCE&G depreciates them using composite straight-line rates approved by the SCPSC.

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections are classified as a regulatory asset or regulatory liability on the consolidated balance sheet (see Note 2). Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2013 and 2012, SCE&G incurred $18.1 million and $11.1 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. SCE&G accrued $1.2 million per month from January 2010 through December 2012 for its portion of the outages in the spring of 2011 and the fall of 2012. Total costs for the 2011 outage were $34.1 million, of which SCE&G was responsible for $22.7 million. Total costs for the 2012 outage were $32.3 million, of which SCE&G was responsible for $21.5 million. In connection with the SCPSC's December 2012 approval of SCE&G's retail electric rates (see Note 2), effective January 1, 2013, SCE&G began to accrue $1.4 million per month for its portion of the nuclear refueling outages that are scheduled to occur through the spring of 2020.

Goodwill

The Company considers amounts categorized by FERC as “acquisition adjustments” with carrying values of $210 million (net of writedown of $230 million) for PSNC Energy (Gas Distribution segment) and $20 million for CGT (All Other segment) to be goodwill. The Company tests these goodwill amounts for impairment annually as of January 1, unless indicators, events or circumstances require interim testing to be performed. The goodwill impairment testing is generally a two-step quantitative process which in step one requires estimation of the fair value of the respective reporting unit and the comparison of that amount to its carrying value. If this step indicates an impairment (a carrying value in excess of fair value), then step two, measurement of the amount of the goodwill impairment (if any), is required. In the first quarter of 2012, the Company adopted guidance under which it has the option to first perform a qualitative assessment of impairment. Based on this qualitative ("step zero") assessment, if the Company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, the Company is not required to proceed with the two-step quantitative assessment.

In evaluations of PSNC Energy, fair value was estimated using the assistance of an independent appraisal. In evaluations of CGT, prior to the adoption of the new guidance, estimated fair value was obtained from discounted cash flow and other analysis. Step zero was utilized for CGT’s evaluation as of January 1, 2013, and step one (via discounted cash flow and other analysis) was again utilized for the evaluation as of January 1, 2014. In all evaluations for the periods presented, step one or step zero, as applicable, has indicated no impairment. The estimated fair values of the reporting units are substantially in excess of their carrying values, and no impairment charges have been recorded; however, should a write-down be required in the future, such a charge would be treated as an operating expense.

Nuclear Decommissioning

SCE&G’s two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars, pursuant to an updated decommissioning cost study performed in 2012. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G’s method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each of 2013, 2012 and 2011) are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

The Company considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Accounts Receivable

Accounts receivable reflect amounts due from customers arising from the delivery of energy or related services and include revenues earned pursuant to revenue recognition practices described below. These receivables include both billed and unbilled amounts. Receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.

Inventory

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas and fuel oil. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC or NCUC, as applicable. Emission allowances are included in inventory at average cost. Emission allowances are expensed at weighted average cost as used and recovered through fuel cost recovery rates approved by the SCPSC.

Asset Management and Supply Service Agreements

PSNC Energy utilizes asset management and supply service agreements with counterparties for certain natural gas storage facilities. Such counterparties held 48% and 44% of PSNC Energy's natural gas inventory at December 31, 2013 and December 31, 2012, respectively, with a carrying value of $22.8 million and $19.6 million, respectively, through either capacity release or agency relationships. Under the terms of the asset management agreements, PSNC Energy receives storage asset management fees. No fees are received under supply service agreements. The agreements expire March 31, 2015.

Income Taxes

The Company files a consolidated federal income tax return. Under a joint consolidated income tax allocation agreement, each subsidiary's current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers of the Company's regulated subsidiaries; otherwise, they are charged or credited to income tax expense.

Regulatory Assets and Regulatory Liabilities

The Company's rate-regulated utilities record costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or revenues would be recognized by a nonregulated enterprise. These regulatory assets and liabilities represent expenses deferred for future recovery from customers or obligations to be refunded to customers and are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs in the ratemaking process.

Debt Premium, Discount and Expense, Unamortized Loss on Reacquired Debt

The Company records long-term debt premium and discount within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. For regulated subsidiaries, other issuance expense and gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are recorded to expense as incurred.

Income Statement Presentation

In its consolidated statements of income, the Company presents the revenues and expenses of its regulated businesses and its retail natural gas marketing businesses (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense).

Revenue Recognition

The Company records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $183.1 million at December 31, 2013 and $189.8 million at December 31, 2012.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. This component is established by the SCPSC during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

SCE&G customers subject to a PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor. PSNC Energy's PGA mechanism authorized by the NCUC allows the recovery of all prudently incurred gas costs, including the results of its hedging program, from customers. Any difference between actual gas costs and amounts contained in rates is deferred and included when establishing gas costs during subsequent PGA filings or in annual prudence reviews.

SCE&G's gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. In August 2010, SCE&G implemented an eWNA on a pilot basis for its electric customers; effective with the first billing cycle of 2014, the eWNA was discontinued as approved by the SCPSC. See Note 2.

PSNC Energy is authorized by the NCUC to utilize a CUT which allows it to adjust base rates semi-annually for residential and commercial customers based on average per customer consumption, whether impacted by weather or other factors.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

Earnings Per Share

The Company computes basic earnings per share by dividing net income by the weighted average number of common shares outstanding for the period. The Company computes diluted earnings per share using this same formula, after giving effect to securities considered to be dilutive potential common stock utilizing the treasury stock method. The Company has issued no securities that would have an antidilutive effect on earnings per share.

A reconciliation of the weighted average number of common shares for each of the three years ended December 31, for basic and diluted purposes is as follows:

In Millions	2013	2012	2011
Weighted Average Shares Outstanding—Basic	138.7	131.1	128.8
Net effect of equity forward contracts	0.4	2.2	1.4
Weighted Average Shares Outstanding—Diluted	139.1	133.3	130.2

2. RATE AND OTHER REGULATORY MATTERS

Rate Matters

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased by SCE&G. In April 2012, the SCPSC approved SCE&G's request to decrease the total fuel cost component of its retail electric rates, and approved a settlement agreement among SCE&G, the ORS and SCEUC in which SCE&G agreed to recover an amount equal to its actual under-collected balance of base fuel and variable environmental costs as of April 30, 2012, or $80.6 million, over a twelve month period beginning with the first billing cycle of May 2012.

This April 2012 order was superseded, in part, by a December 2012 rate order in which the SCPSC authorized SCE&G to reduce the base fuel cost component of its retail electric rates and, in doing so, stated that SCE&G may not adjust its base fuel cost component prior to the last billing cycle of April 2014 except where necessary due to extraordinary unforeseen economic or financial conditions. In February 2013, in connection with its annual review of base rates for fuel costs, SCE&G requested authorization to reduce its environmental fuel cost component effective with the first billing cycle of May 2013. Consistent with the December 2012 rate order, SCE&G did not request any adjustment to its base fuel cost component. In March 2013, SCE&G, ORS and the SCEUC entered into a settlement agreement accepting the proposed lower environmental fuel cost component effective with the first billing cycle of May 2013, and providing for the accrual of certain debt-related carrying costs on a portion of the under-collected balance of fuel costs. The SCPSC issued an order dated April 30, 2013, adopting and approving the settlement agreement and approving SCE&G's total fuel cost component. A public hearing for the annual review of base rates for fuel costs has been scheduled for April 3, 2014.

Pursuant to a November 2013 SCPSC accounting order, the Company's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

Electric - Base Rates

In October 2013, SCE&G received an accounting order from the SCPSC directing it to remove from rate base deferred income tax assets arising from capital expenditures related to the New Units and to accrue carrying costs (recorded as a regulatory asset) on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G’s weighted average long-term borrowing rate, and during 2013, $2.9 million of such carrying costs were accrued within other income. SCE&G anticipates that when the New Units are placed in service and accelerated tax deprecation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

In December 2012, the SCPSC approved a 4.23% overall increase in SCE&G's retail electric base rates, effective January 1, 2013, and authorized an allowed return on common equity of 10.25%. The SCPSC also approved a mid-period reduction to the cost of fuel component in rates (as discussed above), a reduction in the DSM Programs component rider to retail rates, and the recovery of and a return on the net carrying value of certain retired generating plant assets described below. In February 2013, the SCPSC denied the SCEUC's petition for rehearing and the denial was not appealed.

The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills and had been in use since August 2010. In connection with the December 2012 order, SCE&G agreed to perform a study of alternative structures for eWNA. On November 1, 2013, the ORS filed a report with the SCPSC recommending that the eWNA be terminated with the last billing cycle for December 2013. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition.

In connection with the above termination of the eWNA program effective December 31, 2013, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. Pursuant to the SCPSC accounting order granting the above relief and terminating the eWNA, such revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G's 2012 IRP identified six coal-fired units that SCE&G has subsequently retired or intends to retire by 2018, subject to future developments in environmental regulations, among other matters. One of these units was retired in 2012, and two others were retired in the fourth quarter of 2013. The net carrying value of these retired units is recorded in regulatory assets as unrecovered plant and is being amortized over the units' previously estimated remaining useful lives as approved by the SCPSC. The net carrying value of the remaining units is included in Plant to be Retired, Net in the consolidated financial statements. In connection with their retirement, SCE&G expects to be allowed a recovery of and a return on the net carrying value of these remaining units through rates. In the meantime, these units remain in rate base, and SCE&G continues to depreciate them using composite straight-line rates approved by the SCPSC.

In a July 2010 order, the SCPSC provided for a $48.7 million credit to SCE&G's customers over two years to be offset by accelerated recognition of previously deferred state income tax credits. These tax credits were fully amortized in 2012.

SCE&G's DSM Programs for electric customers provide for an annual rider, approved by the SCPSC, to allow recovery of the costs and lost net margin revenue associated with the DSM Programs, along with an incentive for investing in such programs. SCE&G submits annual filings regarding the DSM Programs, net lost revenues, program costs, incentives and net program benefits. The SCPSC has approved the following rate changes pursuant to annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2013	First billing cycle of May	$16.9 million
2012	First billing cycle of May	$19.6 million
2011	First billing cycle of June	$7.0 million

Other activity related to SCE&G's DSM Programs is as follows:

- In May 2013 the SCPSC ordered the deferral of one-half of the net lost revenues and provided for their recovery over a 12-month period beginning with the first billing cycle in May 2014.

- In November 2013 the SCPSC approved SCE&G's continued use of DSM programs for another six years, including approval of the rate rider mechanism and a revised portfolio of DSM programs.

- In January 2014 SCE&G submitted its annual DSM Programs filing to the SCPSC, which included, among other things, a request to (1) recover one-half of the balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2014 and to recover the remaining balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2015, (2) utilize approximately $17.8 million of the gains from the recent settlement of certain interest rate derivative instruments to offset a portion of the net lost revenues component of SCE&G's DSM Programs rider, and (3) apply $ 5 million of its storm damage reserve and a portion of the gains from the recent settlement of certain interest rate derivative instruments, currently estimated to be $5.5 million, to the remaining balance of deferred net lost revenue as of April 30, 2014, deferred within regulatory assets resulting from the May 2013 order previously described.

Electric - BLRA

In May 2011, the SCPSC approved an updated capital cost schedule sought by SCE&G that, among other matters, incorporated then-identifiable additional capital costs of $173.9 million (SCE&G's portion in 2007 dollars).

In November 2012, the SCPSC approved an updated construction schedule and additional updated capital costs of $278 million (SCE&G's portion in 2007 dollars). The November 2012 order approved additional identifiable capital costs of approximately $1 million (SCE&G's portion in 2007 dollars) related to new federal healthcare laws, information security measures, and certain minor design modifications; approximately $8 million (SCE&G's portion in 2007 dollars) related to transmission infrastructure; and approximately $132 million (SCE&G's portion in 2007 dollars) related to additional labor for the oversight of the New Units during construction and for preparing to operate the New Units, and facilities and information technology systems required to support the New Units and their personnel. In addition, the order approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve claims for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. Thereafter, two parties filed separate petitions requesting that the SCPSC reconsider its November 2012 order. On December 12, 2012, the SCPSC denied both petitions. In March 2013, both parties appealed the SCPSC's order to the South Carolina Supreme Court. SCE&G is unable to predict the outcome of these appeals. For further discussion of new nuclear construction matters, see Note 9.

Under the BLRA, SCE&G is allowed to file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Requested rate adjustments are based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved the following rate changes under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	Increase	Amount
2013	2.90%	$ 67.2 million
2012	2.30%	$ 52.1 million
2011	2.40%	$ 52.8 million

Gas

SCE&G

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	Action	Amount
2013	No change	
2012	2.10% Increase	$ 7.5 million
2011	2.10% Increase	$ 8.6 million

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2013 and 2012 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each review period were reasonable and prudent.

PSNC Energy

PSNC Energy is subject to a Rider D rate mechanism which allows it to recover from customers all prudently incurred gas costs and certain uncollectible expenses related to gas cost. The Rider D rate mechanism also allows PSNC Energy to recover, in any manner authorized by the NCUC, losses on negotiated gas and transportation sales.

PSNC Energy's rates are established using a benchmark cost of gas approved by the NCUC, which may be periodically adjusted to reflect changes in the market price of natural gas. PSNC Energy revises its tariffs with the NCUC as necessary to track these changes and accounts for any over- or under-collection of the delivered cost of gas in its deferred accounts for subsequent rate consideration. The NCUC reviews PSNC Energy's gas purchasing practices annually. In addition, PSNC Energy utilizes a CUT which allows it to adjust its base rates semi-annually for residential and commercial customers based on average per customer consumption.

In October 2013, in connection with PSNC Energy's 2013 Annual Prudence Review, the NCUC issued an order finding that PSNC Energy's gas costs, including all hedging transactions, were reasonable and prudently incurred during the 12 months ended March 31, 2013.

During the third quarter of 2013, the State of North Carolina passed legislation that makes changes to statutes covering gross receipts, sales and use, excise, franchise and income taxes. In the fourth quarter, in response to this legislation, the

NCUC initiated a proceeding to investigate how it should proceed in response to the enactment of such legislation. Because the investigation was not completed before January 1, 2014, the NCUC issued an order notifying utilities that the incremental revenue requirement impact associated with the change in the level of state income tax expense included in each utility's cost of service would be deemed to be collected on a provisional basis (subject to refund) beginning January 1, 2014.

Regulatory Assets and Regulatory Liabilities

The Company's cost-based, rate-regulated utilities recognize in their financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, the Company has recorded regulatory assets and regulatory liabilities which are summarized in the following tables. Other than unrecovered plant, substantially all of our regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

	December 31,	
Millions of dollars	**2013**	**2012**
Regulatory Assets:		
Accumulated deferred income taxes	$ 259	$ 254
Under-collections—electric fuel adjustment clause	18	66
Environmental remediation costs	41	44
AROs and related funding	368	319
Franchise agreements	31	36
Deferred employee benefit plan costs	238	460
Planned major maintenance	—	6
Deferred losses on interest rate derivatives	124	151
Deferred pollution control costs	37	38
Unrecovered plant	145	20
DSM Programs	51	27
Other	48	43
Total Regulatory Assets	$ 1,360	$ 1,464
Regulatory Liabilities:		
Accumulated deferred income taxes	$ 24	$ 21
Asset removal costs	695	692
Storm damage reserve	27	27
Monetization of bankruptcy claim	29	32
Deferred gains on interest rate derivatives	181	110
Planned major maintenance	10	—
Total Regulatory Liabilities	$ 966	$ 882

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to depreciation and are expected to be recovered over the remaining lives of the related property which may range up to approximately 70 years. Similarly, accumulated deferred income tax assets arising from deferred investment tax credits are recorded as a regulatory liability.

Under-collections - electric fuel adjustment clause represent amounts due from customers pursuant to the fuel adjustment clause as approved by the SCPSC which are expected to be recovered in retail electric rates over periods exceeding 12 months.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by the Company, and are expected to be recovered over periods of up to approximately 26 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 90 years.

Franchise agreements represent costs associated with electric and gas franchise agreements with the cities of Charleston and Columbia, South Carolina. Based on a SCPSC order, SCE&G began amortizing these amounts through cost of service rates in February 2003 over approximately 20 years.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under generally accepted accounting principles. Deferred employee benefit plan costs represent amounts of pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. In connection with the December 2012 rate order, approximately $63 million of deferred pension costs for electric operations are being recovered through utility rates over approximately 30 years. In connection with the October 2013 RSA order, approximately $14 million of deferred pension costs for gas operations are being recovered through utility rates over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Planned major maintenance related to certain fossil-fueled turbine/generation equipment and nuclear refueling outages is accrued in periods other than when incurred, as approved pursuant to specific SCPSC orders. SCE&G collects $18.4 million annually for such equipment maintenance. Through December 31, 2012, nuclear refueling charges were accrued during each 18-month refueling outage cycle as a component of cost of service. In connection with the December 2012 rate order, effective January 1, 2013, SCE&G collects and accrues $16.8 million annually for nuclear-related refueling charges.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt, up to approximately 30 years. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC.

Deferred pollution control costs represent deferred depreciation and operating and maintenance costs associated with the installation of scrubbers at Wateree and Williams Stations pursuant to specific regulatory orders. Such costs are being recovered through utility rates over periods up to 30 years.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G is amortizing these amounts through cost of service rates over the units' previous estimated remaining useful lives, or up to approximately 14 years. Unamortized amounts are included in rate base and are earning a current return.

DSM Programs represents deferred costs and certain unrecovered lost revenue associated with SCE&G's Demand Side Management programs. Deferred costs are currently being recovered over 5 years through a SCPSC approved rider. Unrecovered lost revenue is to be recovered over periods not to exceed 24 months from date of deferral. See Rate Matters - Electric Base Rates above for details regarding a 2014 filing with the SCPSC regarding recovery of these deferred costs and unrecovered lost revenue.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the non-legal obligation to remove assets in the future.

The storm damage reserve represents an SCPSC-approved collection through SCE&G electric rates, capped at $100 million, which can be applied to offset incremental storm damage costs in excess of $2.5 million in a calendar year. Pursuant to specific regulatory orders, SCE&G has suspended storm damage reserve collection through rates indefinitely.

The monetization of bankruptcy claim represents proceeds from the sale of a bankruptcy claim which are expected to be amortized into operating revenue through February 2024.

The SCPSC, the NCUC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC, the NCUC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by the Company. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, the Company could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the Company's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. COMMON EQUITY

The Company's articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCANA's junior subordinated indenture (relating to the Hybrids), SCE&G's bond indenture (relating to the Bonds) and PSNC Energy's note purchase and debenture purchase agreements each contain provisions that, under certain circumstances, which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2013 and 2012, approximately $63.1 million and $61.0 million of retained earnings, respectively, were restricted by this requirement as to payment of cash dividends on SCE&G's common stock.

Cash dividends on SCANA's common stock were declared during 2013, 2012 and 2011 at an annual rate per share of $2.03, $1.98 and $1.94, respectively.

The accumulated balances related to each component of accumulated other comprehensive income (loss), net of tax, were as follows:

Millions of Dollars	Gains (Losses) on Cash Flow Hedges	Deferred Employee Benefit Plans	Accumulated Other Comprehensive Income (Loss)
Accumulated Other Comprehensive Loss as of January 1, 2012	$ (81)	$ (13)	$ (94)
Other comprehensive income (loss)	11	(3)	8
Accumulated Other Comprehensive Loss as of December 31, 2012	(70)	(16)	(86)
Other comprehensive income	18	8	26
Accumulated Other Comprehensive Loss as of December 31, 2013	$ (52)	$ (8)	$ (60)

Authorized shares of common stock were 200 million as of December 31, 2013 and 2012.

SCANA issued common stock valued at $100.9 million, $97.7 million and $97.8 million (when issued) during the years ended December 31, 2013, 2012 and 2011, respectively, which was satisfied using original issue shares, through various compensation and dividend reinvestment plans, including the Stock Purchase Savings Plan.

In March 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196.2 million.

4. LONG-TERM AND SHORT-TERM DEBT

Long-term debt by type with related weighted average interest rates and maturities at December 31 is as follows:

Dollars in millions	Maturity	2013 Balance	2013 Rate	2012 Balance	2012 Rate
Medium Term Notes (unsecured)	2020 - 2022	$ 800	5.42%	$ 800	5.02%
Senior Notes (unsecured) (a)	2034	92	0.94%	96	1.01%
First Mortgage Bonds (secured)	2018 - 2042	3,540	5.60%	3,290	5.66%
Junior Subordinated Notes (unsecured) (b)	2065	150	7.92%	150	7.70%
GENCO Notes (secured)	2018 - 2024	233	5.89%	240	5.87%
Industrial and Pollution Control Bonds (c)	2014 - 2038	158	3.83%	161	4.32%
Senior Debentures	2020- 2026	350	5.93%	350	5.90%
Nuclear Fuel Financing	2016	100	0.78%	—	—
Other	2014 - 2027	20	2.73%	27	2.39%
Total debt		5,443		5,114	
Current maturities of long-term debt		(54)		(172)	
Unamortized premium (discount)		6		7	
Total long-term debt, net		$ 5,395		$ 4,949	

(a) Variable rate notes hedged by a fixed interest rate swap (fixed rate of 6.47%)
(b) May be extended through 2080
(c) Includes variable rate debt of $67.8 million at December 31, 2013 (rate of 0.11%) and 2012 (rate of 0.17%) which are hedged by fixed swaps.

The annual amounts of long-term debt maturities for the years 2014 through 2018 are summarized as follows:

Year	Millions of dollars
2014	$ 54
2015	15
2016	114
2017	13
2018	722

In June 2013, SCE&G issued $400 million of 4.60% first mortgage bonds due June 15, 2043. Proceeds from this sale were used to pay at maturity $150 million of its 7.125% first mortgage bonds due June 15, 2013, to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In March 2013, SCE&G entered into a contract for the purchase of nuclear fuel totaling $100 million and payable in 2016.

In January 2013, JEDA issued for the benefit of SCE&G $39.5 million of 4.0% tax-exempt industrial revenue bonds due February 1, 2028, and $14.7 million of 3.63% tax-exempt industrial revenue bonds due February 1, 2033. Proceeds from these sales were loaned by JEDA to SCE&G and, together with other available funds, were used to redeem prior to maturity $56.9 million of 5.2% industrial revenue bonds due November 1, 2027. The borrowings refinanced by these 2013 issuances are classified within Long-term Debt, Net in the consolidated balance sheet.

In July 2012, SCE&G issued $250 million of 4.35% first mortgage bonds due February 1, 2042, which constituted a reopening of the prior offering of $250 million of 4.35% first mortgage bonds issued in January 2012. Proceeds from these sales were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures and for general corporate purposes.

In January 2012, SCANA issued $250 million of 4.125% medium term notes due February 1, 2022. Proceeds from the sale were used to retire SCANA's $250 million 6.25% medium term notes due February 1, 2012.

Substantially all of SCE&G's and GENCO's electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2013, the Bond Ratio was 5.28.

Lines of Credit and Short-Term Borrowings

At December 31, 2013 and 2012, SCANA, SCE&G (including Fuel Company) and PSNC Energy had available the following committed LOC and had outstanding the following LOC advances, commercial paper, and LOC-supported letter of credit obligations:

	SCANA		SCE&G		PSNC Energy	
Millions of dollars	**2013**	**2012**	**2013**	**2012**	**2013**	**2012**
Lines of Credit:						
Total committed long-term	$ 300	$ 300	$ 1,400	$ 1,400	$ 100	$ 100
LOC advances	—	—	—	—	—	—
Weighted average interest rate	—	—	—	—	—	—
Outstanding commercial paper (270 or fewer days)	$ 125	$ 142	$ 251	$ 449	—	$ 32
Weighted average interest rate	0.39%	0.58%	0.27%	0.42%	—	0.44%
Letters of credit supported by LOC	$ 3	$ 3	$ 0.3	$ 0.3	—	—
Available	$ 172	$ 155	$ 1,149	$ 951	$ 100	$ 68

SCANA, SCE&G (including Fuel Company) and PSNC Energy are parties to five-year credit agreements in the amounts of $300 million, $1.2 billion (of which $500 million relates to Fuel Company) and $100 million, respectively. In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In October 2013, the term of each of these credit agreements was extended by one year, such that the five-year agreements expire in October 2018, and the three-year agreement expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N.A. and Morgan Stanley Bank, N.A. each provide 10.7% of the aggregate $1.8 billion credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch and UBS Loan Finance LLC each provide 8.9%, and Branch Banking and Trust Company, Union Bank, N.A. and U.S. Bank National Association each provide 6.3%. Two other banks provide the remaining support. The Company pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

The Company is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by Branch Banking and Trust Company. The letters of credit expire, subject to renewal, in the fourth quarter of 2014.

The Company pays fees to the banks as compensation for maintaining committed lines of credit. Such fees were not material in any period presented.

5. INCOME TAXES

Components of income tax expense for 2013, 2012 and 2011 are as follows:

Millions of dollars	2013	2012	2011
Current taxes:			
Federal	$ 161	$ 103	$ 52
State	17	10	10
Total current taxes	178	113	62
Deferred taxes, net:			
Federal	39	72	122
State	10	14	12
Total deferred taxes	49	86	134
Investment tax credits:			
Amortization of amounts deferred-state	(1)	(14)	(25)
Amortization of amounts deferred-federal	(3)	(3)	(3)
Total investment tax credits	(4)	(17)	(28)
Total income tax expense	$ 223	$ 182	$ 168

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2013	2012	2011
Net income	$ 471	$ 420	$ 387
Income tax expense	223	182	168
Total pre-tax income	$ 694	$ 602	$ 555
Income taxes on above at statutory federal income tax rate	$ 243	$ 211	$ 194
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	22	19	15
State investment tax credits (less federal income tax effect)	(5)	(13)	(16)
Allowance for equity funds used during construction	(9)	(8)	(5)
Deductible dividends—Stock Purchase Savings Plan	(10)	(9)	(9)
Amortization of federal investment tax credits	(3)	(3)	(3)
Section 45 tax credits	(5)	(5)	(2)
Domestic production activities deduction	(11)	(9)	(6)
Other differences, net	1	(1)	—
Total income tax expense	$ 223	$ 182	$ 168

The tax effects of significant temporary differences comprising the Company's net deferred tax liability at December 31, 2013 and 2012 are as follows:

Millions of dollars	2013	2012
Deferred tax assets:		
Nondeductible accruals	$ 84	$ 143
Asset retirement obligation, including nuclear decommissioning	220	214
Financial instruments	32	43
Unamortized investment tax credits	19	22
Regulatory liability, net gain on interest rate derivative contracts settlement	27	—
Unbilled revenue	—	14
Monetization of bankruptcy claim	11	12
Other	13	15
Total deferred tax assets	406	463
Deferred tax liabilities:		
Property, plant and equipment	$ 1,765	$ 1,718
Deferred employee benefit plan costs	63	148
Regulatory asset-asset retirement obligation	121	113
Deferred fuel costs	25	48
Regulatory asset, unrecovered plant	55	7
Other	84	71
Total deferred tax liabilities	2,113	2,105
Net deferred tax liability	$ 1,707	$ 1,642

During the third quarter of 2013, the State of North Carolina passed legislation that lowered the state corporate income tax rate from 6.9% to 6.0% in 2014 and 5.0% in 2015. In connection with this change in tax rates, related state deferred tax amounts were remeasured, with the change in their balances being credited to a regulatory liability. The change in income tax rates did not and is not expected to have a material impact on the Company's financial position, results of operations or cash flows. Additionally, during the third quarter of 2013, the IRS issued final regulations regarding the capitalization of certain costs for income tax purposes and re-proposed certain other related regulations (collectively referred to as tangible personal property regulations). Related IRS revenue procedures were then issued on January 24, 2014. These regulations did not and are not expected to, have a material impact on the Company's financial position, results of operations or cash flows.

The Company files a consolidated federal income tax return, and the Company and its subsidiaries file various applicable state and local income tax returns. The IRS has completed examinations of the Company's federal returns through 2004, and the Company's federal returns through 2007 are closed for additional assessment. With few exceptions, the Company is no longer subject to state and local income tax examinations by tax authorities for years before 2009.

Changes to Unrecognized Tax Benefits

Millions of dollars	2013	2012	2011
Unrecognized tax benefits, January 1	—	$ 38	$ 36
Gross increases—uncertain tax positions in prior period	—	—	5
Gross decreases—uncertain tax positions in prior period	—	(38)	(8)
Gross increases—current period uncertain tax positions	$ 3	—	5
Settlements	—	—	—
Lapse of statute of limitations	—	—	—
Unrecognized tax benefits, December 31	$ 3	$ —	$ 38

In connection with the change in method of tax accounting for certain repair costs in prior years, the Company had previously recorded an unrecognized tax benefit. During the first quarter of 2012, the publication of new administrative guidance from the IRS allowed the Company to recognize this benefit. Since this change was primarily a temporary difference, the recognition of this benefit did not have a significant effect on the Company's effective tax rate.

During 2013, the Company amended certain of its tax returns to claim certain tax-defined research and development deductions and credits. In connection with these filings, the Company recorded an unrecognized tax benefit of $3 million. If recognized, this tax benefit would affect the Company's effective tax rate. It is reasonably possible that this tax benefit will increase by an additional $5 million within the next 12 months. No other material changes in the status of the Company's tax positions have occurred through December 31, 2013.

The Company recognizes interest accrued related to unrecognized tax benefits within interest expense and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit in 2012, during 2012 the Company reversed $2 million of interest expense which had been accrued during 2011. The Company has not recorded interest expense or penalties associated with the 2013 uncertain tax position.

6. DERIVATIVE FINANCIAL INSTRUMENTS

The Company recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. The Company recognizes changes in the fair value of derivative instruments either in earnings, as a component of other comprehensive income (loss) or, for regulated subsidiaries, within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by the Company. SCANA's Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries. The Risk Management Committee, which is comprised of certain officers, including the Company's Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to the Audit Committee's attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Commodity Derivatives

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. Instruments designated as cash flow hedges are used to hedge risks associated with fixed price obligations in a volatile market and risks associated with price differentials at different delivery locations. Instruments designated as fair value hedges are used to mitigate exposure to fluctuating market prices created by fixed prices of stored natural gas. The basic types of financial instruments utilized are exchange-traded instruments, such as NYMEX futures contracts or options, and over-the-counter instruments such as options and swaps, which are typically offered by energy companies and financial institutions. Cash settlements of commodity derivatives are classified as operating activities in the consolidated statement of cash flows.

PSNC Energy hedges natural gas purchasing activities using over-the-counter options and swaps and NYMEX futures and options. PSNC Energy's tariffs also include a provision for the recovery of actual gas costs incurred, including any costs of hedging. PSNC Energy records premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program in deferred accounts as a regulatory asset or liability for the over- or under-recovery of gas costs. These derivative financial instruments are not designated as hedges for accounting purposes.

Unrealized gains and losses on qualifying cash flow hedges of nonregulated operations are deferred in AOCI. When the hedged transactions affect earnings, previously recorded gains and losses are reclassified from AOCI to cost of gas. The effects of gains or losses resulting from these hedging activities are either offset by the recording of the related hedged transactions or are included in gas sales pricing decisions made by the business unit.

As an accommodation to certain customers, SEMI, as part of its energy management services, offers fixed price supply contracts which are accounted for as derivatives. These sales contracts are offset by the purchase of supply futures and swaps which are also accounted for as derivatives. Neither the sales contracts nor the related supply futures and swaps are designated as hedges for accounting purposes.

Interest Rate Swaps

The Company may use interest rate swaps to manage interest rate risk and exposure to changes in fair value attributable to changes in interest rates on certain debt issuances. In cases in which the Company synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges, periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, the Company may use treasury rate lock or forward starting swap agreements that are designated as cash flow hedges. Except as described in the following paragraph, the effective portions of changes in fair value and payments made or received upon termination of such agreements for regulated subsidiaries are recorded in regulatory assets or regulatory liabilities. For the holding company or nonregulated subsidiaries, such amounts are recorded in AOCI. Such amounts are amortized to interest expense over the term of the underlying debt. Ineffective portions of fair value changes are recognized in income.

Pursuant to regulatory orders issued in 2013, interest rate derivatives entered into by SCE&G after October 2013 are no longer designated as cash flow hedges, and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Upon settlement, losses on swaps will be amortized over the lives of related debt issuances, and gains may be applied to under-collected fuel, be amortized to interest expense or applied as otherwise directed by the SCPSC. As discussed in Note 2, in these orders, the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

The Company was party to natural gas derivative contracts outstanding in the following quantities:

	Commodity and Other Energy Management Contracts (in MMBTU)			
Hedge designation	**Gas Distribution**	**Retail Gas Marketing**	**Energy Marketing**	**Total**
As of December 31, 2013				
Commodity	6,070,000	6,726,000	2,560,000	15,356,000
Energy Management (a)	—	—	27,359,958	27,359,958
Total (a)	6,070,000	6,726,000	29,919,958	42,715,958
As of December 31, 2012				
Commodity	5,170,000	6,490,000	4,877,000	16,537,000
Energy Management (b)	—	—	31,763,275	31,763,275
Total (b)	5,170,000	6,490,000	36,640,275	48,300,275

(a) Includes an aggregate 348,453 MMBTU related to basis swap contracts in Energy Marketing.
(b) Includes an aggregate 3,500,000 MMBTU related to basis swap contracts in Energy Marketing.

The Company was party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $128.8 million at December 31, 2013, and $1.1 billion at December 31, 2012. The Company was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.3 billion and $0.0 million at December 31, 2013 and 2012, respectively.

The fair value of energy-related derivatives and interest rate derivatives was reflected in the consolidated balance sheet as follows:

	Fair Values of Derivative Instruments			
	Asset Derivatives		Liability Derivatives	
Millions of dollars	Balance Sheet Location	Fair Value	Balance Sheet Location	Fair Value
As of December 31, 2013				
Derivatives designated as hedging instruments				
Interest rate contracts			Other current liabilities	$ 5
			Other deferred credits and other liabilities	14
Commodity contracts	Prepayments and other	$ 2		
Total		$ 2		$ 19
Derivatives not designated as hedging instruments				
Interest rate contracts	Prepayments and other	$ 13	Other current liabilities	$ 1

	Other deferred debits and other assets	6	Other current liabilities	6
			Other deferred debits and other assets	6
Total		$ 14		$ 13

The effect of derivative instruments on the consolidated statements of income is as follows:

Fair Value Hedges

With regard to interest rate swaps designated as fair value hedges, any gains or losses related to the swaps or the fixed rate debt are recognized in current earnings within interest expense. The Company had no interest rate swaps designated as fair value hedges for any period presented, and the amortization of deferred gains on previously terminated swaps were not significant during any period presented.

Cash Flow Hedges

Derivatives in Cash Flow Hedging Relationships

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts (Effective Portion)		Loss Reclassified from Deferred Accounts into Income (Effective Portion) Location	Amount

Interest rate contracts	$	(42)	Interest expense	$	(4)
Commodity contracts		(16)	Gas purchased for resale		(9)
Total	$	(58)		$	(13)

As of December 31, 2013, the Company expects that during the next 12 months reclassifications from accumulated other comprehensive loss to earnings arising from cash flow hedges will include approximately $1.0 million as an increase to gas cost and approximately $7.0 million as an increase to interest expense, assuming natural gas and financial markets remain at their current levels. As of December 31, 2013, all of the Company's commodity cash flow hedges settle by their terms before the end of 2016.

Hedge Ineffectiveness

Other losses recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant in 2013 and 2012 and were $(1.1) million, net of tax, in 2011. These amounts are recorded within interest expense on the consolidated statements of income.

Derivatives Not Designated as Hedging Instruments

Millions of dollars	Loss Recognized in Income Location	Year Ended December 31, 2013	2012		2011	
Commodity contracts	Gas purchased for resale	—	$	(1)	$	(2)

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts	Gain Reclassified from Deferred Accounts into Income	
		Location	Amount
Year Ended December 31, 2013

Year Ended December 31, 2011			
Interest rate contracts	$ —		$ —

The gains reclassified to other income of $50 million offset revenue reductions as previously described herein and in Note 2.

Credit Risk Considerations

The Company limits credit risk in its commodity and interest rate derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, the Company uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. The Company uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with the Company's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of the Company’s derivative instruments contain contingent provisions that require the Company to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2013 and 2012, the Company had posted $26.8 million and $78.3 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months is recorded in Prepayments and other on the consolidated balance sheets. Collateral related to the noncurrent positions is recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2013 and 2012, the Company would have been required to post an additional $0.0 million and $26.2 million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2013 and 2012, are $25.2 million and $104.5 million, respectively.

In addition, as of December 31, 2013 and December 31, 2012, the Company has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2013 and December 31, 2012, the Company could request $34.1 million and $32.1 million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2013 and December 31, 2012 is $34.1 million and $32.1 million, respectively. In addition, at December 31, 2013, the Company could have called on letters of credit in the amount of $ 6 million related to $6 million in commodity derivatives that are in a net asset position, compared to letters of credit of $10 million related to derivatives of $13 million at December 31, 2012, if all the contingent features underlying these instruments had been fully triggered.

Information related to the Company's offsetting derivative assets follows:

Millions of dollars	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Received	Net Amount

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

The Company values available for sale securities using quoted prices from a national stock exchange, such as the NASDAQ, where the securities are actively traded. For commodity derivative and energy management assets and liabilities, the Company uses unadjusted NYMEX prices to determine fair value, and considers such measures of fair value to be Level 1 for exchange traded instruments and Level 2 for over-the-counter instruments. The Company's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

Millions of dollars	As of December 31, 2013 Level 1	As of December 31, 2013 Level 2	As of December 31, 2012 Level 1	As of December 31, 2012 Level 2
Assets:				
Available for sale securities	$ 9	—	$ 6	—
Interest rate contracts	—	$ 32	—	$ 73
Commodity contracts	2	2	1	1
Energy management contracts	1	7	—	13
Liabilities:				
Interest rate contracts	—	20	—	106
Commodity contracts	—	—	—	4
Energy management contracts	—	12	1	15

There were no Level 3 fair value measurements for either period presented, and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2013 and December 31, 2012 were as follows:

Millions of dollars	As of December 31, 2013 Carrying Amount	As of December 31, 2013 Estimated Fair Value	As of December 31, 2012 Carrying Amount	As of December 31, 2012 Estimated Fair Value
Long-term debt	$ 5,449.3	$ 5,916.3	$ 5,121.0	$ 6,115.0

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

The Company sponsors a noncontributory defined benefit pension plan covering substantially all regular, full-time employees hired before January 1, 2014. In the third quarter of 2013, the Company amended its pension plan such that benefits are no longer offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. The Company's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

The Company's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all employees hired from January 1, 2000 through December 31, 2013. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, the Company provides certain unfunded postretirement health care and life insurance benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost. Employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them. The Company provides life insurance benefits to retirees at no charge, except that employees hired after December 31, 2010 are ineligible for retiree life insurance benefits. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

	Pension Benefits		Other Postretirement Benefits	
Millions of dollars	**2013**	**2012**	**2013**	**2012**
Benefit obligation, January 1	$ 931.6	$ 830.1	$ 265.3	$ 226.1
Service cost	21.8	19.6	5.9	4.8
Interest cost	38.5	43.0	11.1	11.9
Plan participants' contributions	—	—	2.6	2.9
Actuarial (gain) loss	(83.4)	96.5	(35.1)	33.4
Benefits paid	(60.0)	(57.6)	(11.8)	(13.8)
Curtailment	(25.5)	—	—	—
Benefit obligation, December 31	$ 823.0	$ 931.6	$ 238.0	$ 265.3

The accumulated benefit obligation for pension benefits was $ 796.4 million at the end of 2013 and $874.6 million at the end of 2012. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

	Pension Benefits		Other Postretirement Benefits	
	2013	2012	2013	2012
Annual discount rate used to determine benefit obligation	5.03%	4.10%	5.19%	4.19%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.75%	3.75%	3.75%

A 7.4% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2013. The rate was assumed to decrease gradually to 5.0% for 2020 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation at December 31, 2013 by $1.3 million and 2012 by $1.7 million. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation at December 31, 2013 by $1.2 million and 2012 by $1.5 million.

Funded Status

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Fair value of plan assets	$ 870.0	$ 799.1	—	—
Benefit obligation	823.0	931.6	$ 238.0	$ 265.3
Funded status	$ 47.0	$ (132.5)	$ (238.0)	$ (265.3)

Amounts recognized on the consolidated balance sheets consist of:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Current liability	—	—	$ (11.5)	$ (11.0)
Noncurrent asset	$ 47.0	—	—	—
Noncurrent liability	—	$ (132.5)	(226.5)	(254.3)

Amounts recognized in accumulated other comprehensive loss (a component of common equity) as of December 31, 2013 and 2012 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Net actuarial loss	$ 5.2	$ 10.7	$ 1.7	$ 3.7
Prior service cost	0.5	1.0	0.1	0.1
Transition obligation	—	—	—	0.1
Total	$ 5.7	$ 11.7	$ 1.8	$ 3.9

Amounts recognized in regulatory assets as of December 31, 2013 and 2012 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Net actuarial loss	$ 124.8	$ 297.0	$ 24.4	$ 57.0
Prior service cost	12.8	26.9	0.9	1.5
Transition obligation	—	—	—	0.2
Total	$ 137.6	$ 323.9	$ 25.3	$ 58.7

In connection with the joint ownership of Summer Station, as of December 31, 2013 and 2012, the Company recorded within deferred debits $14.1 million and $26.8 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2013 and 2012, the Company also recorded within deferred debits $12.6 million and $14.7 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2013	2012
Fair value of plan assets, January 1	$ 799.1	$ 755.0
Actual return on plan assets	130.9	101.7
Benefits paid	(60.0)	(57.6)
Fair value of plan assets, December 31	$ 870.0	$ 799.1

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. The pension plan is closed to new entrants effective January 1, 2014, and benefit accruals will cease effective January 1, 2024. In addition, during 2013, the Company adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs in connection with the amendments to the plan.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The Company's pension plan asset allocation at December 31, 2013 and 2012 and the target allocation for 2014 are as follows:

	Percentage of Plan Assets		
	Target Allocation	At December 31,	
Asset Category	2014	2013	2012
Equity Securities	58%	59%	66%
Fixed Income	33%	32%	25%
Hedge Funds	9%	9%	9%

For 2014, the expected long-term rate of return on assets will be 8.00%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes an asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment policy adopted for 2014.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2013 and 2012, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

Millions of dollars	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
	Fair Value Measurements at Reporting Date Using							
	December 31, 2013				*December 31, 2012*			
Common stock	$ 332	$ 332			$ 319	$ 319		
Preferred stock	1	1			1	1		
Mutual funds	305	20	$ 285		246	12	$ 234	
Short-term investment vehicles	19		19		20		20	
US Treasury securities	33		33		42		42	
Corporate debt securities	53		53		56		56	
Loans secured by mortgages	12		12		11		11	
Municipals	4		4		4		4	
Limited partnerships	35	1	34		30	1	29	
Multi-strategy hedge funds	76			$ 76	70			$ 70
	$ 870	$ 354	$ 440	$ 76	$ 799	$ 333	$ 396	$ 70

There were no transfers of fair value amounts into or out of Level 1, 2 or 3 during 2013 or 2012.

The pension plan values common stock, preferred stock and certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds, common collective trusts and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Loans secured by mortgages are valued using observable prices based on trade data for identical or comparable instruments. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

Millions of dollars	Fair Value Measurements Level 3 2013	2012
Beginning Balance	$ 70	$ 65
Unrealized gains included in changes in net assets	6	5
Purchases, issuances, and settlements	—	—
Ending Balance	$ 76	$ 70

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from the Company's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	Pension Benefits	Other Postretirement Benefits
2014	$ 61.5	$ 11.7
2015	61.2	12.6
2016	63.8	13.4
2017	65.8	14.1
2018	66.1	14.7
2019-2023	338.4	82.4

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, the Company does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

The Company records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2013	2012	2011	2013	2012	2011
Service cost	$ 21.8	$ 19.6	$ 18.3	$ 5.9	$ 4.8	$ 4.3
Interest cost	38.5	43.0	43.5	11.1	11.9	12.2
Expected return on assets	(61.4)	(59.5)	(63.7)	n/a	n/a	n/a
Prior service cost amortization	6.0	7.0	7.0	0.7	0.9	1.0
Amortization of actuarial losses	16.9	18.4	12.2	3.3	1.4	0.4
Transition obligation amortization	—	—	—	0.3	0.7	0.7
Curtailment loss	9.9	—	—	—	—	—
Net periodic benefit cost	$ 31.7	$ 28.5	$ 17.3	$ 21.3	$ 19.7	$ 18.6

Prior to July 15, 2010, the SCPSC allowed SCE&G to defer as a regulatory asset the amount of pension cost exceeding amounts included in rates for its retail electric and gas distribution regulated operations. In connection with the SCPSC's July 2010 electric rate order and November 2010 natural gas RSA order, SCE&G began deferring, as a regulatory asset, all pension cost related to retail electric and gas operations that otherwise would have been charged to expense. Effective in January 2013, in connection with the December 2012 rate order, SCE&G began amortizing previously deferred pension costs related to retail electric operations totaling approximately $63 million over approximately 30 years (see Note 2) and recovering current pension costs related to retail electric operations through a rate rider that may be adjusted annually. Similarly, in connection with the October 2013 RSA order, deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates (see Note 2).

Other changes in plan assets and benefit obligations recognized in other comprehensive income (net of tax) were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2013	2012	2011	2013	2012	2011
Current year actuarial (gain) loss	$ (5.0)	$ 1.7	$ 2.9	$ (1.8)	$ 2.0	$ 0.4
Amortization of actuarial losses	(0.5)	(0.6)	(0.4)	(0.2)	—	—
Amortization of prior service cost	(0.2)	(0.2)	(0.2)	—	—	(0.1)
Prior service cost (credit)	(0.3)	—	—	—	—	—
Amortization of transition obligation	—	—	—	(0.1)	(0.1)	(0.1)
Total recognized in other comprehensive income	$ (6.0)	$ 0.9	$ 2.3	$ (2.1)	$ 1.9	$ 0.2

Other changes in plan assets and benefit obligations recognized in regulatory assets were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2013	2012	2011	2013	2012	2011
Current year actuarial (gain) loss	$ (157.5)	$ 45.0	$ 70.9	$ (29.9)	$ 31.4	$ 6.0
Amortization of actuarial losses	(14.7)	(16.0)	(10.6)	(2.7)	(1.2)	(0.3)
Amortization of prior service cost	(5.2)	(6.4)	(6.4)	(0.6)	(0.8)	(0.9)
Prior service cost (credit)	(8.9)	—	—	—	—	—
Amortization of transition obligation	—	—	—	(0.2)	(0.5)	(0.5)
Total recognized in regulatory assets	$ (186.3)	$ 22.6	$ 53.9	$ (33.4)	$ 28.9	$ 4.3

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
	2013	2012	2011	2013	2012	2011
Discount rate	4.10%/5.07%	5.25%	5.56%	4.19%	5.35%	5.72%
Expected return on plan assets	8.00%	8.25%	8.25%	n/a	n/a	n/a
Rate of compensation increase	3.75%/3.00%	4.00%	4.00%	3.75%	4.00%	4.00%
Health care cost trend rate	n/a	n/a	n/a	7.80%	8.20%	8.00%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2017

Net periodic benefit cost for the period through September 1, 2013 was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The estimated amounts to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2014 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 0.2	—
Prior service cost	0.1	—
Total	$ 0.3	—

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2014 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 4.3	$ 0.4
Prior service cost	3.5	0.3
Total	$ 7.8	$ 0.7

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

Stock Purchase Savings Plan

The Company sponsors a defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. The Company provides 100% matching contributions up to 6% of an employee's eligible earnings. Total matching contributions made to the plan for 2013, 2012 and 2011 were $23.4 million, $22.3 million and $21.8 million, respectively, and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

The LTECP provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA's common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation costs related to share-based payment transactions are required to be recognized in the financial statements. With limited exceptions, including those liability awards discussed below, compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

Liability Awards

The 2011-2013, 2012-2014 and 2013-2015 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three -year performance cycle. In each of the performance cycles, 20% of the performance award was granted in the form of restricted share units, which are liability awards payable in cash and are subject to forfeiture in the event of retirement or termination of employment prior to the end of the cycle, subject to exceptions for death, disability or change in control. The remaining 80% of the award was granted in performance shares. Each performance share has a value that is equal to, and changes with, the value of a share of SCANA common stock. Dividend equivalents are accrued on the performance shares and the restricted share units. Payouts of performance share awards are determined by SCANA's performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in "GAAP-adjusted net earnings per share from operations" (weighted 50%).

Compensation cost of liability awards is recognized over their respective three -year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2011-2013 performance cycle were paid in cash at SCANA's discretion in February 2014. Cash-settled liabilities related to prior program cycles were paid totaling $ 12.2 million in 2013, $11.8 million in 2012, and $13.6 million in 2011.

Fair value adjustments for performance awards resulted in compensation expense recognized in the statements of income totaling $ 8.7 million in 2013, $15.0 million in 2012 and $6.1 million in 2011. Fair value adjustments resulted in capitalized compensation costs of $ 1.4 million in 2013, $2.7 million in 2012 and $0.9 million in 2011.

Equity Awards

No equity awards were made during any period presented, and the effects of previous such awards on the Company's results of operations, cash flows and financial position were not significant.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.6 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million in limits of accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $41.6 million.

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Company's results of operations, cash flows and financial position.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's share of the estimated cash outlays (future value, excluding AFC) totals approximately $5.4 billion for plant and related transmission infrastructure costs, and is projected based on historical one-year and five-year escalation rates as required by the SCPSC.

SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. Under the terms of the agreement SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments would be reflected in a revised rates filing under the BLRA.

The Consortium has experienced delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules are a focus area of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules

CA20 and CA01 are considered critical path items for both New Units. All sub-modules for CA20 have been received on site and its fabrication is underway. CA20 is expected to be ready for placement on the nuclear island of the first New Unit in the first quarter of 2014. In addition, the delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of the first New Unit during the third quarter of 2014. With this schedule, the Consortium continues to indicate that the substantial completion of the first New Unit is expected to be late 2017 or the first quarter of 2018 and that the substantial completion of the second New Unit is expected to be approximately twelve months after that of the first New Unit. The substantial completion dates currently approved by the SCPSC for the first and second New Units are March 15, 2017 and May 15, 2018, respectively. The SCPSC has also approved an 18-month contingency period beyond each of these dates. The preliminary expected new substantial completion dates are within the contingency periods. SCE&G cannot predict with certainty the extent to which the issue with the sub-modules or the delays in the substantial completion of the New Units will result in increased project costs. However, the preliminary estimate of the delay-related costs associated with SCE&G's 55% share of the New Units is approximately $200 million. SCE&G has not accepted responsibility for any of these delay-related costs and expects to have further discussions with the Consortium regarding such responsibility. Additionally, the EPC Contract provides for liquidated damages in the event of a delay in the completion of the New Units, which will also be included in discussions with the Consortium. SCE&G believes its responsibility for any portion of the $200 million estimate should ultimately be substantially less, once all of the relevant factors are considered.

In addition to the above-described project delays, SCE&G is also aware of financial difficulties at a supplier responsible for certain significant components of the project. The Consortium is monitoring the potential for disruptions in such equipment fabrication and possible responses. Any disruptions could impact the project's schedule or costs, and such impacts could be material.

The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve issues that arise during the course of constructing a project of this magnitude. During the course of activities under the EPC Contract, issues have materialized that impact project budget and schedule. Claims specifically relating to COL delays, design modifications of the shield building and certain pre-fabricated modules for the New Units and unanticipated rock conditions at the site resulted in assertions of contractual entitlement to recover additional costs to be incurred. The resolution of these specific claims is discussed in Note 2. SCE&G expects to resolve any disputes that arise in the future, including any which may arise with respect to the delay-related costs discussed above, through both the informal and formal procedures and anticipates that any additional costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedule and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement schedules, construction work crew assignments, and other items. The result will be a revised fully integrated construction schedule that will provide detailed and itemized information on individual budget and cost categories, cost estimates at completion for all non-firm and fixed scopes of work, and the timing of specific construction activities and cash flow requirements. SCE&G anticipates that the revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. These conditions and requirements are responsive to the NRC's Near-Term Task Force report titled “Recommendations for Enhancing Reactor Safety in the 21st Century.” This report was prepared in the wake of the March 2011 earthquake-generated tsunami, which severely damaged several nuclear generating units and their back-up cooling systems in Japan. SCE&G continues to evaluate the impact of these conditions and requirements that may be imposed on the construction and operation of the New Units, and SCE&G, pursuant to the license condition, prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. SCE&G cannot predict what additional regulatory or other outcomes may be implemented in the United States, or how such initiatives would impact SCE&G's existing Summer Station or the construction or operation of the New Units.

Subject to a national megawatt capacity limitation, the electricity to be produced by the New Units (advanced nuclear units, as defined) is expected to qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code. Following the pouring of safety-related concrete for each of the New Units’ reactor buildings (March 2013 for the first New

Unit and November 2013 for the second New Unit), SCE&G has applied to the IRS for its allocations of such national megawatt capacity limitation. The IRS will forward the applications to the DOE for appropriate certification.

Environmental

SCE&G

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. The Company is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015. The Company also cannot predict when rules will become final for existing units, if at all, or what conditions they may impose on the Company, if any. The Company expects that any costs incurred to comply with GHG emission requirements will be recoverable through rates.

From a regulatory perspective, SCANA, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

In 2005, the EPA issued the CAIR, which required the District of Columbia and 28 states to reduce nitrogen oxide and sulfur dioxide emissions in order to attain mandated state levels. CAIR set emission limits to be met in two phases beginning in 2009 and 2015, respectively, for nitrogen oxide and beginning in 2010 and 2015, respectively, for sulfur dioxide. SCE&G and GENCO determined that additional air quality controls would be needed to meet the CAIR requirements. On July 6, 2011 the EPA issued the CSAPR. This rule replaced CAIR and the Clean Air Transport Rule proposed in July 2010 and is aimed at addressing power plant emissions that may contribute to air pollution in other states. CSAPR requires states in the eastern United States to reduce power plant emissions, specifically sulfur dioxide and nitrogen oxide. On December 30, 2011, the United States Court of Appeals for the District of Columbia issued an order staying CSAPR and reinstating CAIR pending resolution of an appeal of CSAPR. On August 21, 2012, the Court of Appeals vacated CSAPR and left CAIR in place. The EPA's petition for rehearing of the Court of Appeals' order was denied. In June 2013 the U.S. Supreme Court agreed to review the Court of Appeals' decision and oral arguments were held on December 10, 2013. A decision is still pending. Air quality control installations that SCE&G and GENCO have already completed have allowed the Company to comply with the reinstated CAIR and will also allow it to comply with CSAPR, if reinstated. The Company will continue to pursue strategies to comply with all applicable environmental regulations. Any costs incurred to comply with such regulations are expected to be recoverable through rates.

In April 2012, the EPA's rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for facilities to meet the standards, and the Company's evaluation of the rule is ongoing. The Company's decision in 2012 to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in the Company's compliance with the EPA's rule. Any costs incurred to comply with this rule or other rules issued by the EPA in the future are expected to be recoverable through rates.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility's NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020.

Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014. The Company is conducting studies and is developing or implementing compliance plans for these initiatives. Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones. These provisions, if passed, could have a material impact on the financial condition, results of operations and cash flows of the Company. The Company believes that any additional costs imposed by such regulations would be recoverable through rates.

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO. While the Company cannot predict how extensive the regulations will be, the Company believes that any additional costs imposed by such regulations would be recoverable through rates.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2013, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017, and has commenced construction of a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. In addition, the states of South Carolina and North Carolina have similar laws. The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify the Company that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue until 2017 and will cost an additional $20.2 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2013, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $36.7 million and are included in regulatory assets.

PSNC Energy

PSNC Energy is responsible for environmental clean-up at five sites in North Carolina on which MGP residuals are present or suspected. Actual remediation costs for these sites will depend on a number of factors, such as actual site conditions, third-party claims and recoveries from other PRPs. PSNC Energy has recorded a liability and associated regulatory asset of approximately $2.8 million, the estimated remaining liability at December 31, 2013. PSNC Energy expects to recover through rates any cost allocable to PSNC Energy arising from the remediation of these sites.

Claims and Litigation

The Company is engaged in various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on the Company's results of operations, cash flows or financial condition.

Operating Lease Commitments

The Company is obligated under various operating leases for vehicles, office space, furniture and equipment. Leases expire at various dates through 2057. Rent expense totaled approximately $14.8 million in 2013, $14.8 million in 2012 and $15.8 million in 2011. Future minimum rental payments under such leases are as follows:

	Millions of dollars
2014	$ 7
2015	6
2016	4
2017	2
2018	1
Thereafter	21
Total	$ 41

Guarantees

SCANA issues guarantees on behalf of its consolidated subsidiaries to facilitate commercial transactions with third parties. These guarantees are in the form of performance guarantees, primarily for the purchase and transportation of natural gas, standby letters of credit issued by financial institutions and credit support for certain tax-exempt bond issues. SCANA is not required to recognize a liability for such guarantees unless it becomes probable that performance under the guarantees will be required. SCANA believes the likelihood that it would be required to perform or otherwise incur any losses associated with these guarantees is remote; therefore, no liability for these guarantees has been recognized. To the extent that a liability subject to a guarantee has been incurred, the liability is included in the consolidated financial statements. At December 31, 2013, the maximum future payments (undiscounted) that SCANA could be required to make under guarantees totaled approximately $1.6 billion.

Asset Retirement Obligations

The Company recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that results from their acquisition, construction, development and normal operation relate primarily to the Company’s regulated utility operations. As of December 31, 2013, the Company has recorded AROs of approximately $191 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $385 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations is as follows:

Millions of dollars	2013	2012
Beginning balance	$ 561	$ 473
Liabilities incurred	6	—
Liabilities settled	(4)	(5)
Accretion expense	25	24
Revisions in estimated cash flows	(12)	69
Ending balance	$ 576	$ 561

11. AFFILIATED TRANSACTIONS

The Company received cash distributions from equity-method investees of $10.4 million in 2013, $12.5 million in 2012 and $5.5 million in 2011 . The Company made investments in equity-method investees of $5.2 million in 2013, $10.6 million in 2012 and $13.6 million in 2011.

SCE&G owns 40% of Canadys Refined Coal, LLC, which is involved in the manufacturing and selling of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G's receivable from this affiliate was $18.0 million at December 31, 2013 and $1.8 million at December 31, 2012. SCE&G's payable to this affiliate was $18.0 million at December 31, 2013 and $1.8 million at December 31, 2012. SCE&G's total purchases from this affiliate were $134.2 million in 2013 and $111.6 million in 2012. SCE&G's total sales to this affiliate were $133.6 million in 2013 and $111.1 million in 2012.

12. SEGMENT OF BUSINESS INFORMATION

Reportable segments, which are described below, follow the same accounting policies as those described in Note 1. The Company records intersegment sales and transfers of electricity and gas based on rates established by the appropriate regulatory authority. Nonregulated sales and transfers are recorded at current market prices.

Electric Operations is primarily engaged in the generation, transmission and distribution of electricity, and is regulated by the SCPSC and FERC.

Gas Distribution, comprised of the local distribution operations of SCE&G and PSNC Energy, is engaged in the purchase and sale, primarily at retail, of natural gas. SCE&G and PSNC Energy are regulated by the SCPSC and the NCUC, respectively.

Retail Gas Marketing markets natural gas in Georgia and is regulated as a marketer by the GPSC. Energy Marketing markets natural gas to industrial and large commercial customers and municipalities, primarily in the Southeast.

All Other is comprised of other direct and indirect wholly-owned subsidiaries of the Company. One of these subsidiaries operates a FERC-regulated interstate pipeline company and the other subsidiaries conduct nonregulated operations in energy-related and telecommunications industries. None of these subsidiaries met the quantitative thresholds for determining reportable segments during any period reported.

Regulated reportable segments share a similar regulatory environment and, in some cases, overlapping service areas. However, Electric Operations' product differs from the other segments, as does its generation process and method of distribution. The marketing segments differ from each other in their respective markets and customer type.

Disclosure of Reportable Segments (Millions of dollars)

		Electric Operations		Gas Distribution		Retail Gas Marketing		Energy Marketing		All Other		Adjustments/ Eliminations		Consolidated Total
2013

Expenditures for Assets		806		140		—		1		17		(18)		946
Deferred Tax Assets		9		12		9		9		17		(30)		26

Management uses operating income to measure segment profitability for SCE&G and other regulated operations and evaluates utility plant, net, for segments attributable to SCE&G. As a result, the Company does not allocate interest charges, income tax expense or assets other than utility plant to its segments. For nonregulated operations, management uses net income as the measure of segment profitability and evaluates total assets for financial position. Interest income is not reported by segment and is not material. The Company's deferred tax assets are netted with deferred tax liabilities for reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the energy-related and regulated segments. Revenues from non-reportable and nonregulated segments are included in Other Income. Therefore the adjustments to total operating revenues remove revenues from non-reportable segments. Adjustments to net income consist of the unallocated net income of the Company's regulated reportable segments.

Segment Assets include utility plant, net for SCE&G's Electric Operations and Gas Distribution, and all assets for PSNC Energy and the remaining segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for SCE&G.

Adjustments to Interest Expense, Income Tax Expense, Expenditures for Assets and Deferred Tax Assets include primarily the totals from SCANA or SCE&G that are not allocated to the segments. Interest Expense is also adjusted to eliminate charges between affiliates. Adjustments to Depreciation and Amortization consist of non-reportable segment expenses, which are not included in the depreciation and amortization reported on a consolidated basis. Expenditures for Assets are adjusted for AFC and revisions to estimated cash flows related to asset retirement obligations. Deferred Tax Assets are adjusted to net them against deferred tax liabilities on a consolidated basis.

13. QUARTERLY FINANCIAL DATA (UNAUDITED)

Millions of dollars, except per share amounts	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Annual

SOUTH CAROLINA ELECTRIC & GAS COMPANY

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCE&G is a regulated public utility engaged in the generation, transmission, distribution and sale of electricity and in the purchase and sale, primarily at retail, and transportation of natural gas. SCE&G's business is subject to seasonal fluctuations. Generally, sales of electricity are higher during the summer and winter months because of air-conditioning and heating requirements, and sales of natural gas are greater in the winter months due to heating requirements. SCE&G's electric service territory extends into 24 counties covering nearly 17,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 35 counties in South Carolina and covers approximately 22,600 square miles.

Key Earnings Drivers and Outlook

During 2013, economic growth continued to improve in the southeast. Significant industrial announcements in SCE&G's service territory were made during the year, and announcements made in previous years began to materialize. In addition, the Port of Charleston continues to see increased traffic, with container volume up 5.7% over 2012. SCE&G's residential and commercial customer growth rates also were positive. At December 31, 2013, a preliminary estimate of seasonally adjusted unemployment for South Carolina was 6.6%. Though improved from the 8.6% unemployment rate at December 31, 2012, the improvement may be due in part to people leaving the workforce. Nationwide the civilian labor force was 62.8% at December 31, 2013, matching a 35-year low.

Over the next five years, key earnings drivers for SCE&G will be additions to utility rate base, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

The electric operations segment is comprised of the electric operations of SCE&G, GENCO and Fuel Company, and is primarily engaged in the generation, transmission, distribution and sale of electricity in South Carolina. At December 31, 2013 SCE&G provided electricity to approximately 678,000 customers. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results for electric operations are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control growth in costs. Through 2013, the effect of weather on operating results was largely mitigated by the eWNA; however, the eWNA was discontinued pursuant to an SCPSC order effective with the first billing cycle of January 2014. Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2013 was 10.25% for non-BLRA expenditures, and 11.0% for BLRA-related expenditures. As further described in Note 2 to the consolidated financial statements, SCE&G's allowed return on equity for non-BLRA expenditures was 10.7% prior to 2013. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electric prices and, therefore, the competitive position of electricity against other energy sources.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G's 2012 IRP identified six coal-fired units that SCE&G has subsequently retired or intends to retire by 2018, subject to future developments in environmental regulations, among other matters. These units have an aggregate generating capacity (2012 summer rating) of 730 MW. As of December 31, 2013, three of these units have been retired. For additional information, see Note 1 and Note 2 to the consolidated financial statements.

New Nuclear Construction

SCE&G is constructing two 1,250 MW (1,117 MW, net) nuclear generation units at the site of Summer Station. SCE&G will jointly own the New Units with Santee Cooper, and SCE&G will be responsible for the cost of and receive the output from the New Units in proportion to its share of ownership, with Santee Cooper responsible for and receiving the remaining share. SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement, SCE&G will acquire a one percent ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional two percent ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final two percent no later than the second anniversary of such commercial operation date. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete.

SCE&G expects Unit 2 to be placed in service in the fourth quarter of 2017 or the first quarter of 2018, with Unit 3's in-service date approximately 12 months later. SCE&G's share of the estimated cash outlays (future value, excluding AFC) for its current 55% ownership share totals approximately $5.4 billion for plant and related transmission infrastructure costs, which costs are projected based on historical one-year and five-year escalation rates as required by the SCPSC. In addition, under the terms of the agreement previously described, SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest.

Significant recent developments in new nuclear construction include the following:

- In the first quarter of 2013, initial pouring of the Unit 2 nuclear island basemat was completed. The basemat provides a foundation for the containment vessel, shield building and auxiliary building that make up the nuclear island. The Unit 3 nuclear island basemat was completed in the fourth quarter of 2013.

- In April 2013, the 500-ton CR-10 module was set on the Unit 2 basemat. CR-10 supports the containment vessel. Construction of Unit 3's CR-10 module is currently underway.

- In May 2013, the containment vessel bottom head for Unit 2 was put in place. The containment vessel will house numerous reactor system components, such as the reactor vessel, steam generator and pressurizer. Work continues in building containment vessel rings that will be placed on the containment vessel bottom head for Unit 2.

- In September 2013, the reactor vessel cavity for Unit 2 (CA-04 module) was placed in the containment vessel bottom head. The reactor vessel cavity will house the reactor vessel, which in turn will house the fuel assemblies. The reactor vessel for Unit 2 is on-site.

- Fabrication has begun for Unit 2's steam generator and refueling canal module (CA-01 module) that will be located inside the containment vessel.

- Ring 1 of the Unit 2 containment vessel is scheduled to be placed on the containment vessel bottom head in the second quarter 2014. Ring 2 is scheduled to be placed in the fourth quarter of 2014.

- While progress has been made with production, quality assurance and quality control issues, the schedule for fabrication of sub-modules at the contractor facility remains a focus area for the project.

- During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules. SCE&G anticipates that this revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

For additional information on these and other matters, see New Nuclear Construction Matters herein and Note 2 and Note 10 to the consolidated financial statements.

<u>Environmental</u>

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. Consolidated SCE&G is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. New federal effluent limitation guidelines for steam electric generating units were published in the Federal Register on June 7, 2013, and the ELG Rule is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020. Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014, and Congress is expected to consider further amendments to the CWA.

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 14, 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO.

The above environmental initiatives and other similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, Consolidated SCE&G cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on it, if any. Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The Gas Distribution segment, comprised of the local distribution operations of SCE&G, is primarily engaged in the purchase, transportation and sale of natural gas to retail customers in portions of South Carolina. At December 31, 2013 this segment provided natural gas to approximately 329,000 customers.

Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control growth in costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25%.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact SCE&G's ability to retain large commercial and industrial customers. In addition, the production of shale gas in the United States has resulted in significantly lower prices for this commodity, and such prices are expected to continue for the foreseeable future.

RESULTS OF OPERATIONS

Net Income

Net income for Consolidated SCE&G was as follows:

Millions of dollars	2013	Change	2012	Change	2011
Net income	$ 390.8	11.0%	$ 352.0	11.4%	$ 316.1

2013 vs 2012	Net income increased due to higher electric and gas margins. These margin increases were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense, further described below.
2012 vs 2011	Net income increased due to higher electric and gas margins. These margin increases were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense, further described below.

Dividends Declared

Consolidated SCE&G's Boards of Directors declared the following dividends on common stock (all of which was held by SCANA) during 2013 and 2012:

Declaration Date	Dividend Amount	Quarter Ended	Payment Date
February 20, 2013	$64.0 million	March 31, 2013	April 1, 2013
April 25, 2013	$63.8 million	June 30, 2013	July 1, 2013
July 31, 2013	$67.5 million	September 30, 2013	October 1, 2013
October 31, 2013	$61.7 million	December 31, 2013	January 1, 2014
February 15, 2012	$53.4 million	March 31, 2012	April 1, 2012
May 3, 2012	$54.1 million	June 30, 2012	July 1, 2012
August 2, 2012	$55.8 million	September 30, 2012	October 1, 2012
October 24, 2012	$45.6 million	December 31, 2012	January 1, 2013

When a dividend payment date falls on a weekend or holiday, the payment is made the following business day.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 2,430.5	(0.9)%	$ 2,453.1	0.9 %	$ 2,432.2
Less: Fuel used in generation	751.0	(11.0)%	844.2	(8.5)%	922.5
Purchased power	43.0	53.0 %	28.1	46.4 %	19.2
Margin	$ 1,636.5	3.5 %	$ 1,580.8	6.1 %	$ 1,490.5

2013 vs 2012 Margin increased primarily due to base rate increases under the BLRA of $54.2 million and higher electric base rates of $67.3 million approved in the December 2012 rate order. Additionally, pursuant to accounting orders of the SCPSC, 2013's electric margin reflects downward adjustments of $50.1 million to revenue. Such adjustments are fully offset by the recognition within other income of gains realized upon the settlement of certain derivative interest rate contracts, which had been deferred as regulatory liabilities. See Note 2 to the consolidated financial statements.

2012 vs 2011 Margin increased primarily by $54.4 million due to an increase in retail electric base rates approved by the SCPSC under the BLRA, by $3.7 million due to customer growth and by $11.0 million due to the expiration of a decrement rider approved in the 2010 retail electric base rate case.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2013	Change	2012	Change	2011
Residential	7,571	—	7,571	(8.0)%	8,232
Commercial	7,205	(1.2)%	7,291	(1.4)%	7,397
Industrial	6,000	2.8 %	5,836	(1.7)%	5,938
Other	581	(0.9)%	586	2.4 %	572
Total retail sales	21,357	0.3 %	21,284	(3.9)%	22,139
Wholesale	955	(63.2)%	2,595	26.6 %	2,049
Total	22,312	(6.6)%	23,879	(1.3)%	24,188

2013 vs 2012 Retail sales volume increased primarily due to customer growth and the effects of weather, partially offset by lower average use. The decrease in wholesale sales is primarily due to the expiration of two customer contracts.

2012 vs 2011 Retail sales volume decreased by 983 GWh primarily due to the effects of milder weather. The increase in wholesale sales is primarily due to higher contract utilization by a wholesale customer.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G. Gas distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2013	Change	2012	Change	2011
Operating revenues	$ 414.4	16.5%	$ 355.6	(8.2)%	$ 387.4
Less: Gas purchased for resale	244.1	24.2%	196.6	(18.0)%	239.7
Margin	$ 170.3	7.1%	$ 159.0	7.7 %	$ 147.7

2013 vs 2012 Margin increased primarily due to the SCPSC-approved increase in base rates under the RSA which became effective with the first billing cycle of November 2012, as well as residential and commercial customer growth.

2012 vs 2011 Margin increased $8.3 million due to the SCPSC-approved increases in retail gas base rates under the RSA which became effective with the first billing cycles of November 2011 and 2012.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2013	Change	2012	Change	2011
Residential	12,515	23.3%	10,153	(13.0)%	11,674
Commercial	12,786	9.1%	11,723	(2.9)%	12,071
Industrial	20,411	5.5%	19,341	14.0 %	16,963
Transportation gas	4,801	2.0%	4,707	7.6 %	4,376
Total	50,513	10.0%	45,924	1.9 %	45,084

2013 vs 2012 Total sales volumes increased primarily due to customer growth, increased industrial usage and the effects of weather.

2012 vs 2011 Residential and commercial sales volume decreased primarily due to milder weather. Industrial and transportation sales volumes increased due to the competitive price of gas versus alternate fuel sources.

Other Operating Expenses

Other operating expenses were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Other operation and maintenance	$ 556.5	2.8%	$ 541.6	5.1%	$ 515.1
Depreciation and amortization	313.4	6.8%	293.4	2.6%	286.1
Other taxes	200.2	6.3%	188.3	3.2%	182.5

2013 vs 2012 Other operation and maintenance expenses increased by $16.7 million due to incremental expenses associated with the December 2012 SCPSC rate order and by $5.7 million due to higher electric generation, transmission and distribution expenses. These increases were partially offset by lower compensation costs of $10.1 million due to reduced headcount and lower incentive compensation accruals and by other general expenses. Depreciation and amortization expense increased $13.2 million due to the recognition of depreciation expense associated with the Wateree Station scrubber which was provided for in the December 2012 SCPSC rate order and due to other net plant additions. Other taxes increased primarily due to higher property taxes on net property additions.

2012 vs 2011 Other operation and maintenance expenses increased by $9.3 million due to higher generation, transmission and distribution expenses, by $1.7 million due to higher general expenses and by $14.2 million due to higher incentive compensation and other benefits. Depreciation and amortization expense increased primarily due to net property additions. Other taxes increased primarily due to higher property taxes on net property additions.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on Consolidated SCE&G's income statements and balance sheets as follows:

Millions of dollars	2013	Change	2012	Change	2011
Income Statement Impact:					
Employee benefit costs	$ 11.0	100.0%	—	—	—
Other expense	0.6	50.0 %	$ 0.4	100.0%	$ 0.2
Balance Sheet Impact:					
Increase in capital expenditures	6.4	12.3 %	5.7	67.6%	3.4
Component of amount receivable from Summer Station co-owner	2.5	13.6 %	2.2	83.3%	1.2
Increase in regulatory asset	5.5	(63.3)%	15.0	64.8%	9.1
Net periodic benefit cost	$ 26.0	11.6 %	$ 23.3	67.6%	$ 13.9

Prior to July 15, 2010, the SCPSC allowed SCE&G to defer as a regulatory asset the amount of pension cost exceeding amounts included in rates for its retail electric and gas distribution regulated operations. In connection with the SCPSC's July 2010 electric rate order and November 2010 natural gas RSA order, SCE&G began deferring, as a regulatory asset, all pension costs related to retail electric and gas operations that otherwise would have been charged to expense. Effective in January 2013, in connection with the December 2012 rate order, SCE&G began amortizing previously deferred pension cost related to retail electric operations totaling approximately $63 million over approximately 30 years (see Note 2) and recovering current pension costs related to retail electric operations through a rate rider that may be adjusted annually. Similarly, in connection with the October 2013 RSA order, deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates (see Note 2 to the consolidated financial statements). In 2013, such amortizations totaled approximately $2.0 million for electric operations and $0.2 million for gas operations.

Other Income (Expense)

Other income (expense) includes the results of certain non-utility activities. Components of other income (expense), were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Other income	$ 52.7	*	$ 0.4	(91.8)%	$ 4.9
Other expense	(17.5)	(2.2)%	(17.9)	51.7 %	(11.8)
Total	$ 35.2	*	$ (17.5)	*	$ (6.9)

* Greater than 100%

2013 vs 2012 Total other income (expense) increased primarily due to the recognition, pursuant to SCPSC accounting orders, of $50.1 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as regulatory liabilities. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income.

2012 vs 2011 Total other income (expense) decreased primarily due to higher non-utility related employee benefit costs in 2012.

AFC

AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. Consolidated SCE&G includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. AFC represented approximately 6.6% of income before income taxes in 2013, 6.3% in 2012 and 4.5% in 2011, respectively.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars	2013	Change	2012	Change	2011
Interest on long-term debt, net	$ 206.8	3.0%	$ 200.7	5.1 %	$ 191.0
Other interest expense	10.5	7.1%	9.8	(27.4)%	13.5
Total	$ 217.3	3.2%	$ 210.5	2.9 %	$ 204.5

Interest on long-term debt increased in each year primarily due to increased long-term borrowings. Other interest expense increased in 2013 and decreased in 2012, primarily due to reductions in principal balances outstanding on short-term debt over the respective prior year and also decreased in 2012 due to the reversal in 2012 of interest which had been accrued in 2011 related to a tax uncertainty that was resolved (see Note 5 to the consolidated financial statements).

Income Taxes

Income tax expense increased in 2013 over 2012 and in 2012 over 2011 primarily due to increases in income before taxes. The increase in the effective tax rate in 2013 is principally attributable to lower recognition of EIZ Credits upon the completion of the amortization of certain such credits in 2012.

LIQUIDITY AND CAPITAL RESOURCES

Consolidated SCE&G anticipates that its contractual cash obligations will be met through internally generated funds and the incurrence of additional short- and long-term indebtedness. Consolidated SCE&G expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt. Consolidated SCE&G's ratio of earnings to fixed charges for the year ended December 31, 2013 was 3.48.

Consolidated SCE&G’s cash requirements arise primarily from its operational needs, funding its construction programs and payment of dividends to SCANA. The ability of Consolidated SCE&G to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental
regulations, will depend upon its ability to attract the necessary financial capital on reasonable terms. Consolidated SCE&G recovers the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and Consolidated SCE&G continues its ongoing construction program, Consolidated SCE&G expects to seek increases in rates. Consolidated SCE&G’s future financial position and results of operations will be affected by Consolidated SCE&G’s ability to obtain adequate and timely rate and other regulatory relief.

Cash outlays for property additions and construction expenditures, including nuclear fuel, net of AFC were $1.0 billion in 2013 and are estimated to be $1.5 billion in 2014.

Consolidated SCE&G’s current estimates of its capital expenditures for construction and nuclear fuel for 2014-2016, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	2014	2015	2016
Consolidated SCE&G - Normal			
Generation	$ 136	$ 145	$ 112
Transmission & Distribution	230	280	258
Other	14	25	19
Gas	50	51	73
Common	9	7	10
Total Consolidated SCE&G - Normal	439	508	472
New Nuclear (including transmission)	950	905	667
Cash Requirements for Construction	1,389	1,413	1,139
Nuclear Fuel	67	30	147
Total Estimated Capital Expenditures	$ 1,456	$ 1,443	$ 1,286

Estimated capital expenditures for Nuclear Fuel in 2016 include approximately $53 million, which is SCE&G's share of nuclear fuel it acquired in 2013. This fuel has been recorded in utility plant and the corresponding obligation has been recorded in long-term debt on the consolidated balance sheet.

Consolidated SCE&G’s contractual cash obligations as of December 31, 2013 are summarized as follows:

Contractual Cash Obligations

	Payments due by period				
Millions of dollars	Total	Less than 1 year	1 - 3 years	4 - 5 years	More than 5 years
Long-term and short-term debt including interest	$ 8,403	$ 510	$ 653	$ 1,090	$ 6,150
Capital leases	12	2	6	2	2
Operating leases	30	5	6	1	18
Purchase obligations	3,669	1,802	1,646	221	—
Other commercial commitments	2,524	527	713	571	713
Total	$ 14,638	$ 2,846	$ 3,024	$ 1,885	$ 6,883

Included in the table above in purchase obligations is SCE&G’s portion of a contractual agreement for the design and construction of the New Units at the Summer Station site. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent of the cost and receiving 55 percent of the output, and other joint owner (or owners) the remaining 45 percent. Also included in the table above is the estimated $500 million SCE&G expects it will cost to acquire an additional 5% ownership in the New Units as further described in New Nuclear Construction Matters.

Also included in purchase obligations are customary purchase orders under which SCE&G has the option to utilize certain vendors without the obligation to do so. SCE&G may terminate such arrangements without penalty.

Included in other commercial commitments are estimated obligations for coal and nuclear fuel purchases. SCE&G also has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional asset retirement obligations that are not listed in the contractual cash obligations above. See Notes 1 and 10 to the consolidated financial statements.

At December 31, 2013, Consolidated SCE&G had posted $1.5 million in cash collateral for interest rate derivative contracts.

Financing Limits and Related Matters

Consolidated SCE&G’s issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including the SCPSC and FERC. Financing programs currently utilized by Consolidated SCE&G follow.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $150 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2014.

In October 2013, the Consolidated SCE&G's existing committed LOCs were extended by one year. As a result, at December 31, 2013 SCE&G and Fuel Company were parties to five-year credit agreements in the amounts of $1.2 billion, (of which $500 million relates to Fuel Company) which expire in October 2018. In addition, at December 31, 2013 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

As of December 31, 2013, Consolidated SCE&G had no outstanding borrowings under its $1.4 billion facilities, had approximately $251 million in commercial paper borrowings outstanding, was obligated under $0.3 million in LOC-supported letters of credit, and had approximately $92 million in cash and temporary investments. Consolidated SCE&G regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance
on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2013 were approximately $369 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2013, Consolidated SCE&G’s long-term debt portfolio has a weighted average maturity of approximately 20 years and bears an average cost of 5.66%. Substantially all of Consolidated SCE&G's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, Consolidated SCE&G rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

SCE&G’s Restated Articles of Incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock, all of which is beneficially owned by SCANA.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2013, approximately $63.1 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12

consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2013, the Bond Ratio was 5.28.

Financing Activities

In June 2013, SCE&G issued $400 million of 4.60% first mortgage bonds due June 15, 2043. Proceeds from this sale were used to pay at maturity $150 million of its 7.125% first mortgage bonds due June 15, 2013, to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In March 2013, SCE&G entered into a contract for the purchase of nuclear fuel totaling $100 million and payable in 2016.

In January 2013, JEDA issued for the benefit of SCE&G $39.5 million of 4.0% tax-exempt industrial revenue bonds due February 1, 2028, and $14.7 million of 3.625% tax-exempt industrial revenue bonds due February 1, 2033. Proceeds from these sales were loaned by JEDA to SCE&G and, together with other available funds, were used to redeem prior to maturity $56.9 million of 5.2% industrial revenue bonds due November 1, 2027.

In November 2012, SCE&G repaid at maturity $4.4 million of 4.2% tax-exempt industrial revenue bonds, and repaid prior to maturity $29.2 million of 5.45% tax-exempt industrial revenue bonds due November 1, 2032.

In July 2012, SCE&G issued $250 million of 4.35% first mortgage bonds due February 1, 2042 (issued at a premium with a yield of 3.86%), which constituted a reopening of the prior offering of $250 million of 4.35% first mortgage bonds which were issued in January 2012. Proceeds from these sales were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures and for general corporate purposes.

During 2013 there were net cash inflows related to financing activities of $49 million primarily due to the issuance of long-term debt and contributions from parent, partially offset by repayment of short- and long-term debt and payment of dividends.

Investing Activities

SCE&G paid approximately $6 million, net, through the third quarter of 2013 to settle interest rate derivative contracts upon the issuance of long-term debt for contracts that had been designated as hedges.

In addition, during the fourth quarter of 2013, SCE&G received approximately $120 million upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt. Pursuant to SCPSC accounting orders, $50.1 million of such gains were recognized within other income, with such gain recognition being fully offset by downward adjustments to revenues reflected within electric margin.

In February 2014, Consolidated SCE&G’s Boards of Directors declared dividends on common stock of $64.3 million, payable on April 1, 2014.

For additional information, see Note 4 to the consolidated financial statements.

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act included 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 and 50% bonus depreciation for property placed in service for 2012. The American Taxpayer Relief Act of 2012 extended the 50% bonus depreciation for property placed in service in 2013. These incentives, along with certain other deductions, have had a positive impact on the cash flows of Consolidated SCE&G.

ENVIRONMENTAL MATTERS

Consolidated SCE&G’s operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. Compliance with these environmental requirements involves significant capital and operating costs, which Consolidated SCE&G expects to recover through existing ratemaking provisions.

For the three years ended December 31, 2013, Consolidated SCE&G's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $46.1 million. In addition, Consolidated SCE&G made expenditures to operate and maintain environmental control equipment at its fossil plants of $9.2 million in 2013, $10.2 million in 2012 and $7.9 million during 2011, which are included in “Other operation and maintenance” expense, and made expenditures to handle waste ash of $3.2 million in 2013, $7.9 million in 2012 and $8.7 million in 2011, which are included in “Fuel used in electric generation.” In addition, included within “Other operation and maintenance” expense is an annual amortization of $1.4 million in each of 2013, 2012 and 2011 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for Consolidated SCE&G are $9.5 million for 2014 and $82.5 million for the four-year period 2015-2018. These expenditures are included in Consolidated SCE&G Estimated Capital Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

At the state level, no significant environmental legislation that would affect Consolidated SCE&G’s operations advanced during 2013. Consolidated SCE&G cannot predict whether such legislation will be introduced or enacted in 2014, or if new regulations or changes to existing regulations at the state level will be implemented in the coming year. Several regulatory initiatives at the federal level did advance in 2013 and more are expected to advance in 2014 as described below.

Air Quality

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, Consolidated SCE&G is subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. Consolidated SCE&G cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact Consolidated SCE&G, and the following discussion should not be considered all-inclusive.

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. Consolidated SCE&G is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015. Consolidated SCE&G also cannot predict when rules will become final for existing units, if at all, or what conditions they may impose on Consolidated SCE&G, if any. Consolidated SCE&G expects that any costs incurred to comply with GHG emission requirements will be recoverable through rates.

From a regulatory perspective, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

In 2005, the EPA issued the CAIR, which required the District of Columbia and 28 states to reduce nitrogen oxide and sulfur dioxide emissions in order to attain mandated state levels. CAIR set emission limits to be met in two phases beginning in 2009 and 2015, respectively, for nitrogen oxide and beginning in 2010 and 2015, respectively, for sulfur dioxide. SCE&G and GENCO determined that additional air quality controls would be needed to meet the CAIR requirements. On July 6, 2011 the EPA issued the CSAPR. This rule replaced CAIR and the Clean Air Transport Rule proposed in July 2010 and is aimed at addressing power plant emissions that may contribute to air pollution in other states. CSAPR requires states in the eastern United States to reduce power plant emissions, specifically sulfur dioxide and nitrogen oxide. On December 30, 2011, the United States Court of Appeals for the District of Columbia issued an order staying CSAPR and reinstating CAIR pending resolution of an appeal of CSAPR. On August 21, 2012, the Court of Appeals vacated CSAPR and left CAIR in place. The EPA's petition for rehearing of the Court of Appeals' order was denied. In June 2013 the U.S. Supreme Court agreed to review the Court of Appeals' decision and oral arguments were held on December 10, 2013. A decision is still pending. Air quality control installations that SCE&G and GENCO have already completed have allowed Consolidated SCE&G to comply with the reinstated CAIR and will also allow it to comply with CSAPR, if reinstated. Consolidated SCE&G will continue to pursue strategies to comply with all applicable environmental regulations. Any costs incurred to comply with such regulations are expected to be recoverable through rates.

In April 2012, the EPA's rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for facilities to meet the standards, and Consolidated SCE&G's evaluation of the rule is ongoing. SCE&G's decision in 2012 to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in Consolidated SCE&G's compliance with the EPA's rule. Any costs incurred to comply with this rule or other rules issued by the EPA in the future are expected to be recoverable through rates.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though Consolidated SCE&G cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

Physical effects associated with climate changes could include the impact of possible changes in weather patterns, such as storm frequency and intensity, and the resultant potential damage to Consolidated SCE&G’s electric system, as well as impacts on employees and customers and on its supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. In addition, SCE&G has collected funds from customers for its storm damage reserve (see Note 2 to the consolidated financial statements). As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations in advance of such storms, all in order to allow Consolidated SCE&G to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Water Quality

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility’s NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020.

Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014. Consolidated SCE&G is conducting studies and is developing or implementing compliance plans for these initiatives. Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones. These provisions, if passed, could have a material impact on the financial condition, results of operations and cash flows of SCE&G and GENCO. Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

Hazardous and Solid Wastes

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO. While Consolidated SCE&G cannot predict how extensive the regulations will be, Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

The final CCR rule may require the closure of ash ponds. SCE&G has three generating facilities that have employed ash storage ponds, and all of these ponds have either been closed after all ash was removed or are part of an ash pond closure project that includes complete removal of the ash prior to closure. The electric generating facilities which continue to be coal-fired have dry ash handling, and the ash ponds undergoing closure have a detailed dam safety inspection conducted at least quarterly.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2012, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017 and has commenced construction of a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. In addition, the state of South Carolina has a similar law. Consolidated SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean up. In addition, regulators from the EPA and other federal or state agencies periodically notify Consolidated SCE&G that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized with recovery provided through rates. Consolidated SCE&G has assessed the following matters:

Electric Operations

SCE&G maintains an environmental assessment program to identify and evaluate its current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. At December 31, 2013, such regulatory assets totaled approximately $1.2 million. Other environmental costs are recorded to expense as incurred.

Gas Distribution

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC. SCE&G anticipates that major remediation activities at these sites will continue until 2017 and will cost an additional $21.2 million. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2013, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $36.7 million and are included in regulatory assets.

REGULATORY MATTERS

SCE&G, GENCO and Fuel Company are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCE&G, GENCO and Fuel Company	The CFTC to the extent they transact swaps as defined in Dodd-Frank.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions and other matters; the PHMSA as to integrity management requirements for gas distribution pipeline systems; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety, antitrust considerations and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the sale of electric energy at wholesale for resale, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to the issuance of short-term borrowings, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of Consolidated SCE&G's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Utility Regulation

Consolidated SCE&G's regulated operations record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, Consolidated SCE&G may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of Consolidated SCE&G's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of Consolidated SCE&G's regulatory assets and liabilities, including those associated with Consolidated SCE&G's environmental program.

Consolidated SCE&G's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, Consolidated SCE&G could be required to write down its investment in those assets. Consolidated SCE&G cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect Consolidated SCE&G's results of operations in the period in which they would be recorded. As of December 31, 2013, Consolidated SCE&G's net investments in fossil/hydro and nuclear generation assets were $2.4 billion and $2.9 billion, respectively.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, SCE&G records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. As of December 31, 2013 and 2012, accounts receivable included unbilled revenues of $111.9 million and $129.0 million, respectively, compared to total revenues of $2.8 billion for each of such years.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G’s accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and timing of cash flows. Changes in any of these estimates could significantly impact SCE&G’s financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G’s two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G’s method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures on an after-tax basis.

Asset Retirement Obligations

Consolidated SCE&G accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from their acquisition, construction, development and normal operation in accordance with applicable accounting guidance. The obligations are recognized at present value in the period in which they are incurred and associated asset retirement costs are capitalized as a part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to Consolidated SCE&G’s utility operations, their recognition has no significant impact on results of operations. As of December 31, 2013, Consolidated SCE&G has recorded AROs of $191 million for nuclear plant decommissioning (as discussed above) and AROs of $356 million for other conditional obligations related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded in accordance with the relevant accounting guidance are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

SCE&G participates in SCANA’s noncontributory defined benefit pension plan, which covers substantially all regular, full-time employees. SCANA recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. SCANA’s plan is adequately funded under current regulations. Accounting guidance requires the use of several assumptions, the selection of which has an impact on the resulting pension cost recorded. Among the more sensitive assumptions are those surrounding discount rates and expected returns on assets. SCANA's net pension cost of $31.7 million ($26.0 million attributable to SCE&G) recorded in 2013 reflects the use of a 4.10% discount rate prior to re-measurement on September 1, 2013 and a 5.07% discount rate after the re-measurement, derived using a cash flow matching technique, and an assumed 8.00% long-term rate of return on plan assets. The re-measurement occurred in connection with a plan amendment and related curtailment, which is further described below. SCANA believes that these assumptions were, and that the resulting pension cost amount was, reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2013 would have increased SCANA's pension cost by $1.2 million. Further, had the assumed long-term rate of return on assets been 7.75%, SCANA's pension cost for 2013 would have increased by $1.9 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

SCANA determines the fair value of a large majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, SCANA evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2013, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 7.5%, 6.3%, 8.8% and 9.7%, respectively. The 2013 expected long-term rate of return of 8.00% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. SCANA regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2014, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.4%, 6.0%, 8.3% and 9.3%, respectively. For 2014, the expected rate of return is 8.00%.

As of December 31, 2013, 2012, and 2011, approximately $5.5 million, $14.9 million and $9.0 million, respectively, of pension expense was deferred pursuant to regulatory orders. As part of a December 2012 SCPSC rate order, cumulative previously deferred pension costs related to electric operations of approximately $63 million is being amortized over approximately 30 years, and starting in January 2013 current pension expense for electric operations is being recovered through a pension cost rider. Similarly, in connection with the October 2013 RSA order, previously deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates.

In the third quarter of 2013, the pension plan was amended such that pension benefits will no longer be offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, SCANA recorded a curtailment charge due to the accelerated amortization of prior service cost. Approximately $5.3 million of the curtailment charge was applicable to regulated operations and was deferred within regulatory assets. SCE&G is recovering such deferred amounts through existing regulatory orders.

The closure of the plan to entrants after December 31, 2013 and the cessation of benefit accruals in 2023 are expected to further lessen the significance of pension costs and the criticality of the related estimates to SCE&G's financial statements. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. SCANA accounts for the cost of postretirement medical and life insurance benefit plans in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. SCANA used a discount rate of 4.19%, derived using a cash flow matching technique, and recorded a net cost to SCE&G of $16.5 million for 2013. Had the selected discount rate been 3.94% (25 basis points lower than the discount rate referenced above), the expense for 2013 would have been $0.5 million higher. Because the plan provisions include "caps" on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

NEW NUCLEAR CONSTRUCTION MATTERS

SCE&G is constructing two 1,250 MW (1,117 MW, net) nuclear generation units at the site of Summer Station. SCE&G will jointly own the New Units with Santee Cooper, and SCE&G will be responsible for the cost of and receive the output from the New Units in proportion to its share of ownership, with Santee Cooper responsible for and receiving the remaining share. SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement, SCE&G will acquire a one percent ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional two percent ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final two percent no later than the second anniversary of such commercial operation date. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete.

It is expected that Unit 2 will be placed in service in the fourth quarter of 2017 or the first quarter of 2018, with Unit 3's in-service date approximately 12 months later. SCE&G's share of the estimated cash outlays (future value, excluding AFC) for its current 55% ownership share totals approximately $5.4 billion for plant and related transmission infrastructure costs, which costs are projected based on historical one-year and five-year escalation rates as required by the SCPSC. In addition, under the terms of the agreement previously described, SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments would be reflected in revised rates filings under the BLRA.

In November 2012, the SCPSC approved an updated construction schedule and additional updated capital costs of $278 million (SCE&G's portion in 2007 dollars). The November 2012 order approved additional identifiable capital costs of approximately $1 million (SCE&G's portion in 2007 dollars) related to new federal healthcare laws, information security measures, and certain minor design modifications; approximately $8 million (SCE&G's portion in 2007 dollars) related to transmission infrastructure; and approximately $132 million (SCE&G's portion in 2007 dollars) related to additional labor for the oversight of the New Units during construction and for preparing to operate the New Units, and facilities and information technology systems required to support the New Units and their personnel. In addition, the order approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve claims for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. Thereafter, two parties filed separate petitions requesting that the SCPSC reconsider its November 2012 order. On December 12, 2012, the SCPSC denied both petitions. In March 2013, both parties appealed the SCPSC's order to the South Carolina Supreme Court. SCE&G is unable to predict the outcome of these appeals. For further discussion of new nuclear construction matters, see Note 9.

The Consortium has experienced delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules are a focus area of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01 are considered critical path items for both New Units. All sub-modules for CA20 have been received on site and its fabrication is underway. CA20 is expected to be ready for placement on the nuclear island of the first New Unit in the first quarter of 2014. In addition, the delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of the first New Unit during the third quarter of 2014. With this schedule, the Consortium continues to indicate that the substantial completion of the first New Unit is expected to be late 2017 or the first quarter of 2018 and that the substantial completion of the second New Unit is expected to be approximately twelve months after that of the first New Unit. The substantial completion dates currently approved by the SCPSC for the first and second New Units are March 15, 2017 and May 15, 2018, respectively. The SCPSC has also approved an 18-month contingency period beyond each of these dates. The preliminary expected new substantial completion dates are within the contingency periods. SCE&G cannot predict with certainty the extent to which the issue with the sub-modules or the delays in the substantial completion of the New Units will result in increased project costs. However, the preliminary estimate of the delay-related costs associated with SCE&G's 55% share of the New Units is approximately $200 million. SCE&G has not accepted responsibility for any of these delay-related costs and expects to have further discussions with the Consortium regarding such responsibility. Additionally, the EPC Contract provides for liquidated damages in the event of a delay in the completion of the New Units, which will also be included in discussions with the Consortium. SCE&G believes its responsibility for any portion of the $200 million estimate should ultimately be substantially less, once all of the relevant factors are considered.

In addition to the above-described project delays, SCE&G is also aware of financial difficulties at a supplier responsible for certain significant components of the project. The Consortium is monitoring the potential for disruptions in such equipment fabrication and possible responses. Any disruptions could impact the project's schedule or costs, and such impacts could be material.

The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve issues that arise during the course of constructing a project of this magnitude. During the course of activities under the EPC Contract, issues have materialized that impact project budget and schedule. Claims specifically relating to COL delays, design modifications of the shield building and certain pre-fabricated modules for the New Units and unanticipated rock conditions at the site resulted in assertions of contractual entitlement to recover additional costs to be incurred. The resolution of these specific claims is discussed in Note 2 to the consolidated financial statements. SCE&G expects to resolve any disputes that arise in the future, including any which may arise with respect to the delay-related costs discussed above, through both the informal and formal procedures and anticipates that any additional costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedule and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement schedules, construction work crew assignments, and other items. The result will be a revised fully integrated construction schedule that will provide for detailed and itemized information on individual budget and cost categories, cost estimates at completion for all non-firm and fixed scopes of work, and the timing of specific construction activities and cash flow requirements. SCE&G anticipates that this revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. These conditions and requirements are responsive to the NRC's Near-Term Task Force report titled “Recommendations for Enhancing Reactor Safety in the 21st Century.” This report was prepared in the wake of the March 2011 earthquake-generated tsunami, which severely damaged several nuclear generating units and their back-up cooling systems in Japan. SCE&G continues to evaluate the impact of these conditions and requirements that may be imposed on the construction and operation of the New Units, and SCE&G, pursuant to the license condition, prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. SCE&G cannot predict what additional regulatory or other outcomes may be implemented in the United States, or how such initiatives would impact SCE&G's existing Summer Station or the construction or operation of the New Units.

Subject to a national megawatt capacity limitation, the electricity to be produced by the New Units (advanced nuclear units, as defined) is expected to qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code. Following the pouring of safety-related concrete for each of the New Units’ reactor buildings (March 2013 for the first New Unit and November 2013 for the second New Unit), SCE&G has applied to the IRS for its allocations of such national megawatt capacity limitation. The IRS will forward the applications to the DOE for appropriate certification. Under current provisions of the Internal Revenue Code and based on SCE&G's current 55% ownership and other assumptions regarding volumes of electricity to be generated by the New Units, the aggregate production tax credits for which SCE&G qualifies could exceed $1.3 billion over the eight year period following each of the New Units' in-service dates. In January 2014, SCE&G amended its application to include the additional 5% interest in the New Units that it expects to acquire. Additional production tax credits related to the 5% interest could total as much as $125 million.

OTHER MATTERS

Financial Regulatory Reform

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. Consolidated SCE&G has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. Consolidated SCE&G is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

Off-Balance Sheet Transactions

Consolidated SCE&G does not hold significant investments in unconsolidated special purpose entities. Consolidated SCE&G does not engage in off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment and rail cars, none of which are considered significant.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments held by Consolidated SCE&G described below are held for purposes other than trading.

The tables below provide information about long-term debt issued by Consolidated SCE&G which is sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

	Expected Maturity Date							
December 31, 2013 **Millions of dollars**	**2014**	**2015**	**2016**	**2017**	**2018**	**Thereafter**	**Total**	**Fair Value**
Long-Term Debt:								
Fixed Rate ($)	45.2	9.2	108.6	8.2	717.9	3,086.5	3,975.6	4,356.6
Average Interest Rate (%)	4.84	4.73	1.11	4.96	5.95	6.62	6.32	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	64.9
Average Variable Interest Rate (%)	—	—	—	—	—	0.11	0.11	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	600.0	650.0	—	—	—	71.4	1,321.4	30.6
Average Pay Interest Rate (%)	3.96	4.16	—	—	—	3.29	4.02	—
Average Receive Interest Rate (%)	0.25	0.25	—	—	—	0.06	0.24	—

	Expected Maturity Date							
December 31, 2012 **Millions of dollars**	**2013**	**2014**	**2015**	**2016**	**2017**	**Thereafter**	**Total**	**Fair Value**
Long-Term Debt:								
Fixed Rate ($)	159.5	45.1	8.6	8.1	7.7	3,405.9	3,634.9	4,458.0
Average Interest Rate (%)	6.98	4.84	4.85	5.01	5.12	5.60	5.65	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	65.8
Average Variable Interest Rate (%)	—	—	—	—	—	0.17	0.17	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	600.0	300.0	—	—	—	71.4	971.4	(2.5)
Average Pay Interest Rate (%)	3.01	2.48	—	—	—	3.29	2.87	—
Average Receive Interest Rate (%)	0.31	0.31	—	—	—	0.13	0.29	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

The above tables exclude long-term debt of $3 million at December 31, 2013 and $9 million at December 31, 2012, which amounts do not have stated interest rates associated with them.

For further discussion of Consolidated SCE&G's long-term debt and interest rate derivatives, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholder of
South Carolina Electric & Gas Company
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of South Carolina Electric & Gas Company and affiliates (the "Company") as of December 31, 2013 and 2012, and the related consolidated statements of income, comprehensive income, cash flows, and changes in equity for each of the three years in the period ended December 31, 2013. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

See Notes to Consolidated Financial Statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCE&G, a public utility, is a South Carolina corporation organized in 1924 and a wholly-owned subsidiary of SCANA, a South Carolina corporation. Consolidated SCE&G engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina and in the purchase, sale and transportation of natural gas to retail customers in South Carolina.

SCE&G has determined that it has a controlling financial interest in GENCO and Fuel Company (which are considered to be VIEs), and accordingly, the accompanying consolidated financial statements include the accounts of SCE&G, GENCO and Fuel Company. The equity interests in GENCO and Fuel Company are held solely by SCANA, SCE&G's parent. Accordingly, GENCO's and Fuel Company's equity and results of operations are reflected as noncontrolling interest in Consolidated SCE&G's consolidated financial statements. Intercompany balances and transactions between SCE&G, Fuel Company and GENCO have been eliminated in consolidation.

GENCO owns a coal-fired electric generating station with a 605 megawatt net generating capacity (summer rating). GENCO's electricity is sold, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a power purchase agreement and related operating agreement. The effects of these transactions are eliminated in consolidation. Substantially all of GENCO's property (carrying value of approximately $476 million) serves as collateral for its long-term borrowings. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission and other environmental allowances. See also Note 4.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Utility Plant

Utility plant is stated substantially at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset's life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. Consolidated SCE&G calculated AFC using average composite rates of 6.9% for 2013, 6.3% for 2012 and 4.6% for 2011. These rates do not exceed the maximum allowable rate as calculated under FERC Order No. 561. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

Consolidated SCE&G records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. The composite weighted average depreciation rates for utility plant assets were 2.94% in 2013, 2.91% in 2012 and 2.90% in 2011.

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in "Fuel used in electric generation" and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2013		2012	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.1 billion	—	$ 1.1 billion	—
Accumulated depreciation	$ 566.9 million	—	$ 557.0 million	—
Construction work in progress	$ 127.1 million	$ 2.3 billion	$ 113.6 million	$ 1.8 billion

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's share of the estimated cash outlays (future value, excluding AFC) totals approximately $5.4 billion for plant and related transmission infrastructure costs, and is projected based on historical one-year and five-year escalation rates as required by the SCPSC. For a discussion of when the New Units are expected to be placed in service, and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $75.6 million at December 31, 2013 and $92.9 million at December 31, 2012.

Plant to be Retired

As previously disclosed, in 2012 SCE&G identified a total of six coal-fired units that it intends to retire by 2018, subject to future developments in environmental regulations, among other matters. These units had an aggregate generating capacity (summer 2012) of 730 MW. As of December 31, 2013, three of these units had been retired and their net carrying value is recorded in regulatory assets (see Note 2). The net carrying value of the remaining units is identified as Plant to be Retired, Net in the consolidated financial statements. SCE&G plans to request recovery of and a return on the net carrying value of these remaining units in future rate proceedings in connection with their retirement, and expects that such deferred amounts will be recovered through rates. In the meantime, these units remain in rate base, and SCE&G depreciates them using composite straight-line rates approved by the SCPSC.

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections are classified as a regulatory asset or regulatory liability on the balance sheet (see Note 2). Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2013 and 2012, SCE&G incurred $18.1 million and $11.1 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. SCE&G accrued $1.2 million per month from January 2010 through December 2012 for its portion of the outages in the spring of 2011 and the fall of 2012. Total costs for the 2011 outage were $34.1 million, of which SCE&G was responsible for $22.7 million. Total costs for the 2012 outage were $32.3 million, of which SCE&G was responsible for $21.5 million. In connection with the SCPSC's December 2012 approval of SCE&G's retail electric rates (see Note 2), effective January 1, 2013, SCE&G began to accrue $1.4 million per month for its portion of the nuclear refueling outages that are scheduled to occur through the spring of 2020.

Nuclear Decommissioning

SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars, pursuant an updated decommissioning cost study performed in 2012. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each of 2013, 2012 and 2011) are invested in insurance policies on the lives of certain SCE&G and affiliate personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

Consolidated SCE&G considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Accounts Receivable

Accounts receivable reflect amounts due from customers arising from the delivery of energy or related services and include revenues earned pursuant to revenue recognition practices described below. These receivables include both billed and unbilled amounts. Receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.

Inventory

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas and fuel oil. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC. Emission allowances are included in inventory at average cost. Emission allowances are expensed at weighted average cost as used and recovered through fuel cost recovery rates approved by the SCPSC.

Income Taxes

Consolidated SCE&G is included in the consolidated federal income tax return of SCANA. Under a joint consolidated income tax allocation agreement, each SCANA subsidiary's current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers; otherwise, they are charged or credited to income tax expense. Also under provisions of the income tax allocation agreement, certain tax benefits of the parent holding company are distributed in cash to tax paying affiliates, including Consolidated SCE&G, in the form of capital contributions.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G records costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or revenues would be recognized by a nonregulated enterprise. These regulatory assets and liabilities represent expenses deferred for future recovery from customers or obligations to be refunded to customers and are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs in the ratemaking process.

Debt Premium, Discount and Expense, Unamortized Loss on Reacquired Debt

Consolidated SCE&G records long-term debt premium and discount within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. Other issuance expense and gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are recorded to expense as incurred.

Income Statement Presentation

In its consolidated statements of income, Consolidated SCE&G presents the revenues and expenses of its regulated activities (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense).

Revenue Recognition

Consolidated SCE&G records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $111.9 million at December 31, 2013 and $129.0 million at December 31, 2012.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. This component is established by the SCPSC during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

Customers subject to the PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor.

SCE&G’s gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. In August 2010, SCE&G implemented an eWNA on a pilot basis for its electric customers; effective with the first billing cycle of 2014, the eWNA was discontinued as approved by the SCPSC. See Note 2.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

2. RATE AND OTHER REGULATORY MATTERS

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased by SCE&G. In April 2012, the SCPSC approved SCE&G's request to decrease the total fuel cost component of its retail electric rates, and approved a settlement agreement among SCE&G, the ORS and SCEUC in which SCE&G agreed to recover an amount equal to its actual under-collected balance of base fuel and variable environmental costs as of April 30, 2012, or $80.6 million, over a twelve month period beginning with the first billing cycle of May 2012.

This April 2012 order was superseded, in part, by a December 2012 rate order in which the SCPSC authorized SCE&G to reduce the base fuel cost component of its retail electric rates and, in doing so, stated that SCE&G may not adjust its base fuel cost component prior to the last billing cycle of April 2014 except where necessary due to extraordinary unforeseen economic or financial conditions. In February 2013, in connection with its annual review of base rates for fuel costs, SCE&G requested authorization to reduce its environmental fuel cost component effective with the first billing cycle of May 2013. Consistent with the December 2012 rate order, SCE&G did not request any adjustment to its base fuel cost component. In March 2013, SCE&G, ORS and the SCEUC entered into a settlement agreement accepting the proposed lower environmental fuel cost component effective with the first billing cycle of May 2013, and providing for the accrual of certain debt-related carrying costs on a portion of the under-collected balance of fuel costs. The SCPSC issued an order dated April 30, 2013, adopting and approving the settlement agreement and approving SCE&G's total fuel cost component. A public hearing for the annual review of base rates for fuel costs has been scheduled for April 3, 2014.

Pursuant to a November 2013 SCPSC accounting order, Consolidated SCE&G's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

Electric - Base Rates

In October 2013, SCE&G received an accounting order from the SCPSC directing it to remove from rate base deferred income tax assets arising from capital expenditures related to the New Units and to accrue carrying costs (recorded as a regulatory asset) on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G's weighted average long-term borrowing rate, and during 2013, $2.9 million of such carrying costs were accrued within other income. SCE&G anticipates that when the New Units are placed in service and accelerated tax deprecation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

In December 2012, the SCPSC approved a 4.23% overall increase in SCE&G's retail electric base rates, effective January 1, 2013, and authorized an allowed return on common equity of 10.25%. The SCPSC also approved a mid-period reduction to the cost of fuel component in rates (as discussed above), a reduction in the DSM Programs component rider to retail rates, and the recovery of and a return on the net carrying value of certain retired generating plant assets described below. In February 2013, the SCPSC denied the SCEUC's petition for rehearing and the denial was not appealed.

The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills and had been in use since August 2010. In connection with the December 2012 order, SCE&G agreed to perform a study of alternative structures for eWNA. On November 1, 2013, the ORS filed a report with the SCPSC recommending that the eWNA be terminated with the last billing cycle for December 2013. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition.

In connection with the above termination of the eWNA program effective December 31, 2013, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. Pursuant to the SCPSC accounting order granting the above relief and terminating the eWNA, such revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G's 2012 IRP identified six coal-fired units that SCE&G has subsequently retired or intends to retire by 2018, subject to future developments in environmental regulations, among other matters. One of these units was retired in 2012, and two others were retired in the fourth quarter of 2013. The net carrying value of these retired units is recorded in regulatory assets as unrecovered plant and is being amortized over the units' previously estimated remaining useful lives as approved by the SCPSC. The net carrying value of the remaining units is included in Plant to be Retired, Net in the consolidated financial statements. In connection with their retirement, SCE&G expects to be allowed a recovery of and a return on the net carrying value of these remaining units through rates. In the meantime, these units remain in rate base, and SCE&G continues to depreciate them using composite straight-line rates approved by the SCPSC.

In a July 2010 order, the SCPSC provided for a $48.7 million credit to SCE&G's customers over two years to be offset by accelerated recognition of previously deferred state income tax credits. These tax credits were fully amortized in 2012.

SCE&G's DSM Programs for electric customers provide for an annual rider, approved by the SCPSC, to allow recovery of the costs and lost net margin revenue associated with the DSM Programs, along with an incentive for investing in such programs. SCE&G submits annual filings regarding the DSM Programs, net lost revenues, program costs, incentives and net program benefits. The SCPSC has approved the following rate changes pursuant to annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2013	First billing cycle of May	$16.9 million
2012	First billing cycle of May	$19.6 million
2011	First billing cycle of June	$7.0 million

Other activity related to SCE&G's DSM Programs is as follows:

- In May 2013 the SCPSC ordered the deferral of one-half of the net lost revenues and provided for their recovery over a 12-month period beginning with the first billing cycle in May 2014.
- In November 2013 the SCPSC approved SCE&G's continued use of DSM programs for another six years, including approval of the rate rider mechanism and a revised portfolio of DSM programs.
- In January 2014 SCE&G submitted its annual DSM Programs filing to the SCPSC, which included, among other things, a request to (1) recover one-half of the balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2014 and to recover the remaining balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2015, (2) utilize approximately $17.8 million of the gains from the recent settlement of certain interest rate derivative instruments to offset a portion of the net lost revenues component of SCE&G's DSM Programs rider, and (3) apply $5 million of its storm damage reserve and a portion of the gains from the recent settlement of certain interest rate derivative instruments, currently estimated to be $5.5 million, to the remaining balance of deferred net lost revenue as of April 30, 2014, deferred within regulatory assets resulting from the May 2013 order previously described.

Electric - BLRA

In May 2011, the SCPSC approved an updated capital cost schedule sought by SCE&G that, among other matters, incorporated then-identifiable additional capital costs of $173.9 million (SCE&G's portion in 2007 dollars).

In November 2012, the SCPSC approved an updated construction schedule and additional updated capital costs of $278 million (SCE&G's portion in 2007 dollars). The November 2012 order approved additional identifiable capital costs of approximately $1 million (SCE&G's portion in 2007 dollars) related to new federal healthcare laws, information security measures, and certain minor design modifications; approximately $8 million (SCE&G's portion in 2007 dollars) related to transmission infrastructure; and approximately $132 million (SCE&G's portion in 2007 dollars) related to additional labor for the oversight of the New Units during construction and for preparing to operate the New Units, and facilities and information technology systems required to support the New Units and their personnel. In addition, the order approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve claims for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. Thereafter, two parties filed separate petitions requesting that the SCPSC reconsider its November 2012 order. On December 12, 2012, the SCPSC denied both petitions. In March 2013, both parties appealed the SCPSC's order to the South Carolina Supreme Court. SCE&G is unable to predict the outcome of these appeals. For further discussion of new nuclear construction matters, see Note 9.

Under the BLRA, SCE&G is allowed to file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Requested rate adjustments are based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved the following rate changes under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	Increase	Amount
2013	2.90%	$ 67.2 million
2012	2.30%	$ 52.1 million
2011	2.40%	$ 52.8 million

Gas

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	Action	Amount
2013	No change	
2012	2.10% Increase	$ 7.5 million
2011	2.10% Increase	$ 8.6 million

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2013 and 2012 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each review period were reasonable and prudent.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G has significant cost-based, rate-regulated operations and recognizes in its financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, Consolidated SCE&G has recorded regulatory assets and regulatory liabilities, which are summarized in the following tables. Other than unrecovered plant, substantially all of our regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

	December 31,	
Millions of dollars	**2013**	**2012**
Regulatory Assets:		
Accumulated deferred income taxes	$ 256	$ 248
Under-collections-electric fuel adjustment clause	18	66
Environmental remediation costs	37	39
AROs and related funding	350	304
Franchise agreements	31	36
Deferred employee benefit plan costs	215	405
Planned major maintenance	—	6
Deferred losses on interest rate derivatives	124	151
Deferred pollution control costs	37	38
Unrecovered Plant	145	20
DSM Programs	51	27
Other	39	37
Total Regulatory Assets	$ 1,303	$ 1,377

Regulatory Liabilities:		
Accumulated deferred income taxes	$ 19	$ 21
Asset removal costs	495	507
Storm damage reserve	27	27
Deferred gains on interest rate derivatives	181	110
Planned major maintenance	10	—
Total Regulatory Liabilities	$ 732	$ 665

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to depreciation and are expected to be recovered over the remaining lives of the related property which may range up to approximately 70 years. Similarly, accumulated deferred income tax assets arising from deferred investment tax credits are recorded as a regulatory liability.

Under-collections - electric fuel adjustment clause represent amounts due from customers pursuant to the fuel adjustment clause as approved by the SCPSC which are expected to be recovered in retail electric rates over periods exceeding 12 months.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by SCE&G and are expected to be recovered over periods of up to approximately 26 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 90 years.

Franchise agreements represent costs associated with electric and gas franchise agreements with the cities of Charleston and Columbia, South Carolina. Based on a SCPSC order, SCE&G began amortizing these amounts through cost of service rates in February 2003 over approximately 20 years.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under generally accepted accounting principles. Deferred employee benefit plan costs represent amounts of pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. In connection with the December 2012 rate order, approximately $63 million of deferred pension costs for electric operations are being recovered through utility rates over approximately 30 years. In connection with the October 2013 RSA order, approximately $14 million of deferred pension costs for gas operations are being recovered through utility rates over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Planned major maintenance related to certain fossil-fueled turbine/generation equipment and nuclear refueling outages is accrued in periods other than when incurred, as approved pursuant to specific SCPSC orders. SCE&G collects $18.4 million annually for such equipment maintenance. Through December 31, 2012, nuclear refueling charges were accrued during each 18-month refueling outage cycle as a component of cost of service. In connection with the December 2012 rate order, effective January 1, 2013, SCE&G collects and accrues $16.8 million annually for nuclear-related refueling charges.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt, up to approximately 30 years. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC.

Deferred pollution control costs represent deferred depreciation and operating and maintenance costs associated with the installation of scrubbers at Wateree and Williams Stations pursuant to specific regulatory orders. Such costs are being recovered through utility rates over periods up to 30 years.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G is amortizing these amounts through cost of service rates over the units' previous estimated remaining useful lives, or up to approximately 14 years. Unamortized amounts are included in rate base and are earning a current return.

DSM Programs represents deferred costs and certain unrecovered lost revenue associated with SCE&G’s Demand Side Management programs. Deferred costs are currently being recovered over 5 years through a SCPSC approved rider. Unrecovered lost revenue is to be recovered over periods not to exceed 24 months from date of deferral. See Rate Matters - Electric Base Rates above for details regarding a 2014 filing with the SCPSC regarding recovery of these deferred costs and unrecovered lost revenue.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the non-legal obligation to remove assets in the future.

The storm damage reserve represents an SCPSC-approved collection through SCE&G electric rates, capped at $100 million, which can be applied to offset incremental storm damage costs in excess of $2.5 million in a calendar year. Pursuant to specific regulatory orders, SCE&G has suspended storm damage reserve collection through rates indefinitely.

The SCPSC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by SCE&G. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, Consolidated SCE&G could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on Consolidated SCE&G's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. EQUITY

The balance for accumulated other comprehensive income (loss), net of tax, was as follows:

Millions of Dollars	Deferred Employee Benefit Plans
Accumulated Other Comprehensive Loss as of January 1, 2012	$ (3)
Other comprehensive loss	(1)
Accumulated Other Comprehensive Loss as of December 31, 2012	(4)
Other comprehensive income	1
Accumulated Other Comprehensive Loss as of December 31, 2013	$ (3)

Authorized shares of SCE&G common stock were 50 million as of December 31, 2013 and 2012. Authorized shares of SCE&G preferred stock were 20 million, of which 1,000 shares, no par value, were held by SCANA as of December 31, 2013 and 2012.

SCE&G’s articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2013 and 2012, approximately $63.1 million and $61.0 million of retained earnings, respectively, were restricted by this requirement as to payment of cash dividends on common stock.

4. LONG-TERM AND SHORT-TERM DEBT

Long-term debt by type with related weighted average interest rates and maturities at December 31 is as follows:

Dollars in millions	Maturity	2013 Balance	2013 Rate	2012 Balance	2012 Rate
First Mortgage Bonds (secured)	2018 - 2042	$ 3,540	5.60%	$ 3,290	5.66%
GENCO Notes (secured)	2018 - 2024	233	5.89%	240	5.87%
Industrial and Pollution Control Bonds (a)	2014 - 2038	158	3.83%	161	4.32%
Nuclear Fuel Financing	2016	100	0.78%	—	—
Other	2014 - 2027	16	2.26%	21	1.62%
Total debt		4,047		3,712	
Current maturities of long-term debt		(48)		(165)	
Unamortized premium		8		10	
Total long-term debt, net		$ 4,007		$ 3,557	

(a) Includes variable rate debt of $67.8 million at December 31, 2013 (rate of 0.11%) and 2012 (rate of 0.17%), which are hedged by fixed swaps.

The annual amounts of long-term debt maturities for the years 2014 through 2018 are summarized as follows:

Year	Millions of dollars
2014	$ 48
2015	9
2016	109
2017	8
2018	718

In June 2013, SCE&G issued $400 million of 4.60% first mortgage bonds due June 15, 2043. Proceeds from this sale were used to pay at maturity $150 million of its 7.125% first mortgage bonds due June 15, 2013, to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

In March 2013, SCE&G entered into a contract for the purchase of nuclear fuel totaling $100 million and payable in 2016.

In January 2013, JEDA issued for the benefit of SCE&G $39.5 million of 4.0% tax-exempt industrial revenue bonds due February 1, 2028, and $14.7 million of 3.63% tax-exempt industrial revenue bonds due February 1, 2033. Proceeds from these sales were loaned by JEDA to SCE&G and, together with other available funds, were used to redeem prior to maturity $56.9 million of 5.2% industrial revenue bonds due November 1, 2027. The borrowings refinanced by these 2013 issuances are classified within Long-term Debt, Net in the consolidated balance sheet.

In July 2012, SCE&G issued $250 million of 4.35% first mortgage bonds due February 1, 2042, which constituted a reopening of the prior offering of $250 million of 4.35% first mortgage bonds issued in January 2012. Proceeds from these sales were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures and for general corporate purposes.

Substantially all of SCE&G’s and GENCO’s electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12

consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2013, the Bond Ratio was 5.28.

Lines of Credit and Short-Term Borrowings

At December 31, 2013 and 2012, SCE&G (including Fuel Company) had available the following committed LOC and had outstanding the following LOC advances, commercial paper, and LOC-supported letter of credit obligations:

Millions of dollars		2013		2012
Lines of credit:				
Total committed long-term	$	1,400	$	1,400
LOC advances		—		—
Weighted average interest rate		—		—
Outstanding commercial paper (270 or fewer days)	$	251	$	449
Weighted average interest rate		0.27%		0.42%
Letters of credit supported by an LOC	$	0.3	$	0.3
Available	$	1,149	$	951

SCE&G and Fuel Company are parties to five-year credit agreements in the amount of $1.2 billion (of which $500 million relates to Fuel Company). In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In October 2013, the term of each of these credit agreements was extended by one year, such that the five-year agreements will expire in October 2018, and the three-year agreement expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N. A. and Morgan Stanley Bank, N.A. each provide 10.7% of the aggregate $1,400 million credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch and UBS Loan Finance LLC each provide 8.9% and Branch Banking and Trust Company, Union Bank, N.A. and U.S. Bank National Association each provide 6.3%. Two other banks provide the remaining support. Consolidated SCE&G pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

Consolidated SCE&G is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by Branch Banking and Trust Company. These letters of credit expire, subject to renewal, in the fourth quarter of 2014.

Consolidated SCE&G pays fees to the banks as compensation for maintaining committed lines of credit. Such fees were not material in any period presented.

Consolidated SCE&G participates in a utility money pool with SCANA and certain other subsidiaries of SCANA. Money pool borrowings and investments bear interest at short-term market rates. Consolidated SCE&G's interest income and expense from money pool transactions was not significant for any period presented. At December 31, 2013 and 2012, Consolidated SCE&G had outstanding money pool borrowings due to an affiliate of $27.3 million and $49.4 million, respectively, which are included within affiliated payables on the consolidated balance sheet.

5. INCOME TAXES

Components of income tax expense for 2013, 2012, and 2011 are as follows:

Millions of dollars	2013	2012	2011
Current taxes:			
Federal	$ 146	$ 91	$ 52
State	13	8	12
Total current taxes	159	99	64
Deferred taxes, net:			
Federal	25	62	98
State	9	12	6
Total deferred taxes	34	74	104
Investment tax credits:			
Amortization of amounts deferred—state	(1)	(13)	(25)
Amortization of amounts deferred—federal	(3)	(3)	(3)
Total investment tax credits	(4)	(16)	(28)
Total income tax expense	$ 189	$ 157	$ 140

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2013	2012	2011
Net income	$ 380	$ 341	$ 306
Income tax expense	189	157	140
Noncontrolling interest	11	11	10
Total pre-tax income	$ 580	$ 509	$ 456
Income taxes on above at statutory federal income tax rate	$ 203	$ 178	$ 159
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	18	17	12
State investment tax credits (less federal income tax effect)	(5)	(13)	(16)
Allowance for equity funds used during construction	(9)	(7)	(5)
Amortization of federal investment tax credits	(3)	(3)	(3)
Section 45 tax credits	(5)	(5)	(2)
Domestic production activities deduction	(11)	(9)	(6)
Other differences, net	1	(1)	1
Total income tax expense	$ 189	$ 157	$ 140

The tax effects of significant temporary differences comprising Consolidated SCE&G's net deferred tax liability at December 31, 2013 and 2012 are as follows:

Millions of dollars	2013	2012
Deferred tax assets:		
Nondeductible accruals	$ 17	$ 73
Asset retirement obligation, including nuclear decommissioning	209	204
Unamortized investment tax credits	19	21
Unbilled revenue	—	14
Regulatory liability, net gain on interest rate derivative contracts settlement	27	—
Other	11	13
Total deferred tax assets	283	325
Deferred tax liabilities:		
Property, plant and equipment	$ 1,494	$ 1,461
Regulatory asset-asset retirement obligation	114	107
Deferred employee benefit plan costs	54	127
Deferred fuel costs	26	49
Regulatory asset, unrecovered plant	55	7
Other	62	53
Total deferred tax liabilities	1,805	1,804
Net deferred tax liability	$ 1,522	$ 1,479

Consolidated SCE&G is included in the consolidated federal income tax return of SCANA and files various applicable state and local income tax returns. The IRS has completed examinations of SCANA's federal returns through 2004, and SCANA's federal returns through 2007 are closed for additional assessment. With few exceptions, Consolidated SCE&G is no longer subject to state and local income tax examinations by tax authorities for years before 2009.

Changes to Unrecognized Tax Benefits

Millions of dollars	2013	2012	2011
Unrecognized tax benefits, January 1	—	$ 38	$ 36
Gross increases-uncertain tax positions in prior period	—	—	5
Gross decreases-uncertain tax positions in prior period	—	(38)	(8)
Gross increases-current period uncertain tax positions	$ 3	—	5
Settlements	—	—	—
Lapse of statute of limitations	—	—	—
Unrecognized tax benefits, December 31	$ 3	$ —	$ 38

In connection with the change in method of tax accounting for certain repair costs in prior years, the Company had previously recorded an unrecognized tax benefit. During the first quarter of 2012, the publication of new administrative guidance from the IRS allowed Consolidated SCE&G to recognize this benefit. Since this change was primarily a temporary difference, the recognition of this benefit did not have a significant effect on the Consolidated SCE&G's effective tax rate.

During 2013, Consolidated SCE&G amended certain of its tax returns to claim certain tax-defined research and development deductions and credits. In connection with these filings, Consolidated SCE&G recorded an unrecognized tax benefit of $3 million. If recognized, this tax benefit would affect Consolidated SCE&G's effective tax rate. It is reasonably possible that this tax benefit will increase by an additional $5 million within the next 12 months. No other material changes in the status of the Consolidated SCE&G's tax positions have occurred through December 31, 2013.

Consolidated SCE&G recognizes interest accrued related to unrecognized tax benefits within interest expense and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit in 2012, during 2012 Consolidated SCE&G reversed $2 million of interest expense which had been accrued during 2011. Consolidated SCE&G has not recorded interest expense or penalties associated with the 2013 uncertain tax position.

6. DERIVATIVE FINANCIAL INSTRUMENTS

Consolidated SCE&G recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. Consolidated SCE&G recognizes changes in the fair value of derivative instruments either in earnings or within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by Consolidated SCE&G. SCANA's Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries, including Consolidated SCE&G. The Risk Management Committee, which is comprised of certain officers, including Consolidated SCE&G's Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to the Audit Committee's attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Interest Rate Swaps

Consolidated SCE&G synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges. Periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, Consolidated SCE&G may use treasury rate lock or forward starting swap agreements. Pursuant to regulatory orders issued in 2013, interest rate derivatives entered into by SCE&G after October 2013 are no longer designated as cash flow hedges, and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Upon settlement, losses on swaps will be amortized over the lives of related debt issuances, and gains may be applied to under-collected fuel, be amortized to interest expense or applied as otherwise directed by the SCPSC. As discussed in Note 2, in these orders, the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013. Prior to this regulatory authorization, such interest rate derivatives were designated as cash flow hedges, and only the effective portions of changes in fair value and payments made or received upon termination of such agreements were recorded in regulatory assets or regulatory liabilities. Such amounts are amortized to interest expense over the term of the underlying debt. Ineffective portions were recognized in income.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

Consolidated SCE&G was a party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $36.4 million and $971.4 million at December 31, 2013 and 2012, respectively. Consolidated SCE&G was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.3 billion and $0.0 million at December 31, 2013 and 2012, respectively.

The fair value of interest rate derivatives was reflected in the consolidated balance sheet as follows:

	Fair Values of Derivative Instruments			
	Asset Derivatives		Liability Derivatives	
Millions of dollars	Balance Sheet Location	Fair Value	Balance Sheet Location	Fair Value
As of December 31, 2013				
Derivatives designated as hedging instruments				
Interest rate contracts			Other current liabilities	$ 1
Total				$ 1
Derivatives not designated as hedging instruments				
Interest rate contracts	Prepayments and other	$ 13	Other current liabilities	$ 1
	Other deferred debits and other assets	19		
Total		$ 32		$ 1
As of December 31, 2012				
Derivatives designated as hedging instruments				
Interest rate contracts	Prepayments and other	$ 42	Other current liabilities	$ 66
	Other deferred debits and other assets	31	Other deferred credits and other liabilities	9
Total		$ 73		$ 75

The effect of derivative instruments on the consolidated statement of income is as follows:

Derivatives in Cash Flow Hedging Relationships	Gain or (Loss) Deferred in Regulatory Accounts	Loss Reclassified from Deferred Accounts into Income (Effective Portion)	
Millions of dollars	(Effective Portion)	Location	Amount
Year Ended December 31, 2013			
Interest rate contracts	$ 106	Interest expense	$ (3)
Year Ended December 31, 2012			
Interest rate contracts	$ 84	Interest expense	$ (3)
Year Ended December 31, 2011			
Interest rate contracts	$ (76)	Interest expense	$ (3)

Hedge Ineffectiveness

Other losses recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant in 2013 and 2012 and were $(1.1) million, net of tax, in 2011.

Derivatives Not Designated as Hedging Instruments	Loss Recognized in Income	Year Ended December 31,		
Millions of dollars	Location	2013	2012	2011
Commodity contracts	Gas purchased for resale	—	$ (1)	$ (2)

Millions of dollars	Gain Deferred in Regulatory Accounts		Gain Reclassified from Deferred Accounts into Income: Location	Amount	
Year Ended December 31, 2013					
Interest rate contracts	$	39	Other income	$	50
Year Ended December 31, 2012					
Interest rate contracts		—			—
Year Ended December 31, 2011					
Interest rate contracts		—			—

The gains reclassified to other income of $50 million offset revenue reductions as previously described herein and in Note 2.

Credit Risk Considerations

Consolidated SCE&G limits credit risk in its derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, Consolidated SCE&G uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. Consolidated SCE&G uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with Consolidated SCE&G's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of Consolidated SCE&G’s derivative instruments contain contingent provisions that require Consolidated SCE&G to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2013 and 2012, Consolidated SCE&G had posted $1.5 million and $35.2 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months are recorded in Prepayments and other on the consolidated balance sheets. Collateral related to the noncurrent positions are recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2013 and 2012, Consolidated SCE&G would have been required to post an additional $0.0 million and $22.7 million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2013 and 2012, are $1.0 million and $57.9 million, respectively.

In addition, as of December 31, 2013 and December 31, 2012, Consolidated SCE&G has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2013 and December 31, 2012, Consolidated SCE&G could request $31.7 million and $32.1 million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2013 and December 31, 2012 is $31.7 million and $32.1 million, respectively.

Information related to Consolidated SCE&G's offsetting derivative assets follows:

Millions of dollars	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Received	Net Amount
As of December 31, 2013						
Interest rate	$ 32	—	$ 32	$ (1)	—	$ 31
Balance sheet location	Prepayments and other		$ 13			
	Other deferred debits and other assets		19			
	Total		$ 32			
As of December 31, 2012						
Interest rate	$ 73	—	$ 73	$ (17)	—	$ 56
Balance sheet location	Prepayments and other		$ 42			
	Other deferred debits and other assets		31			
	Total		$ 73			

Information related to Consolidated SCE&G's offsetting derivative liabilities follows:

Millions of dollars	Gross Amounts of Recognized Liabilities	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Posted	Net Amount
As of December 31, 2013						
Interest rate	$ 2	—	$ 2	$ (1)	$ 1	$ —

	Other deferred credits and other liabilities		9			
	Total		$ 75			

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

Consolidated SCE&G's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value Level 2 measurements were as follows:

	As of December 31, 2013	As of December 31, 2012
Millions of dollars	Level 2	Level 2
Assets-Interest rate contracts	$ 32	$ 73
Liabilities-Interest rate contracts	2	75

There were no Level 1 or Level 3 fair value measurements for either period presented and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2013 and December 31, 2012 were as follows:

	As of December 31, 2013		As of December 31, 2012	
Millions of dollars	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Long-term debt	$ 4,054.9	$ 4,433.0	$ 3,722.0	$ 4,543.1

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Carrying values reflect the fair values of interest rate swaps designated as fair value hedges, based on discounted cash flow models with independently sourced market data. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

SCE&G participates in SCANA's noncontributory defined benefit pension plan, which covers substantially all regular, full-time employees hired before January 1, 2014. In the third quarter of 2013, SCANA amended its pension plan such that benefits are no longer offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. SCANA's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

SCANA's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all employees hired from January 1, 2000 through December 31, 2013. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost. Employees hired after December 31, 2010 are responsible for the full costs of retiree medical benefits elected by them. SCANA provides life insurance benefits to retirees at no charge, except that employees hired after December 31, 2010 are ineligible for retiree life insurance benefits. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

The same benefit formula applies to all SCANA subsidiaries participating in the parent sponsored plans and, with regard to the pension plan, there are no legally separate asset pools. The postretirement benefit plans are accounted for as multiple employer plans. The information presented below reflects Consolidated SCE&G's portion of the obligations, assets, funded status, net periodic benefit costs, and other information reported for the parent sponsored plans as a whole. The tabular data presented reflects the use of various cost assignment methodologies and participation assumptions based on Consolidated SCE&G's past and current employees and its share of plan assets.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

	Pension Benefits		Other Postretirement Benefits	
Millions of dollars	**2013**	**2012**	**2013**	**2012**
Benefit obligation, January 1	$ 788.4	$ 705.0	$ 206.0	$ 178.4
Service cost	17.6	15.7	4.6	3.7
Interest cost	32.6	36.4	8.7	9.4
Plan participants’ contributions	—	—	2.0	2.3
Actuarial (gain) loss	(70.7)	80.3	(27.3)	26.2
Benefits paid	(50.6)	(49.0)	(9.3)	(10.8)
Curtailment	(21.6)	—	—	—
Amounts funded to parent	—	—	(3.0)	(3.2)
Benefit obligation, December 31	$ 695.7	$ 788.4	$ 181.7	$ 206.0

The accumulated benefit obligation for pension benefits was $673.2 million at the end of 2013 and $740.2 million at the end of 2012. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

	Pension Benefits		Other Postretirement Benefits	
	2013	**2012**	**2013**	**2012**
Annual discount rate used to determine benefit obligation	5.03%	4.10%	5.19%	4.19%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.75%	3.75%	3.75%

A 7.4% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2013. The rate was assumed to decrease gradually to 5.0% for 2020 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation at December 31, 2013 by $1.0 million and at December 31, 2012 by $1.3 million. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation at December 31, 2013 by $0.9 million and 2012 by $1.2 million.

Funded Status

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	**2013**	**2012**	**2013**	**2012**
Fair value of plan assets	$ 792.1	$ 732.0	—	—
Benefit obligation	695.7	788.4	$ 181.7	$ 206.0
Funded status	$ 96.4	$ (56.4)	$ (181.7)	$ (206.0)

Amounts recognized on the consolidated balance sheets consist of:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Current liability	—	—	$ (7.8)	$ (8.5)
Noncurrent asset	$ 96.4	—	—	—
Noncurrent liability	—	$ (56.4)	(173.9)	(197.5)

Amounts recognized in accumulated other comprehensive loss (a component of common equity) as of December 31, 2013 and 2012 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Net actuarial loss	$ 1.8	$ 2.7	$ 0.6	$ 1.1
Prior service cost	0.2	0.2	—	—
Total	$ 2.0	$ 2.9	$ 0.6	$ 1.1

Amounts recognized in regulatory assets as of December 31, 2013 and 2012 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2013	2012	2013	2012
Net actuarial loss	$ 107.7	$ 257.5	$ 20.1	$ 46.7
Prior service cost	11.1	23.3	0.7	1.2
Transition obligation	—	—	—	0.1
Total	$ 118.8	$ 280.8	$ 20.8	$ 48.0

In connection with the joint ownership of Summer Station, as of December 31, 2013 and 2012, SCE&G recorded within deferred debits $14.1 million and $26.8 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2013 and 2012, SCE&G also recorded within deferred debits $12.6 million and $14.7 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2013	2012
Fair value of plan assets, January 1	$ 732.0	$ 695.3
Actual return on plan assets	110.7	85.7
Benefits paid	(50.6)	(49.0)
Fair value of plan assets, December 31	$ 792.1	$ 732.0

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. The pension plan is closed to new entrants effective January 1, 2014, and benefit accruals will cease effective January 1, 2024. In addition, during 2013, SCANA adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs in connection with the amendments to the plan.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The pension plan asset allocation at December 31, 2013 and 2012 and the target allocation for 2014 are as follows:

	Percentage of Plan Assets		
	Target Allocation	At December 31,	
Asset Category	2014	2013	2012
Equity Securities	58%	59%	66%
Fixed Income	33%	32%	25%
Hedge Funds	9%	9%	9%

For 2014, the expected long-term rate of return on assets will be 8.00%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes an asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment policy adopted for 2014.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2013 and 2012, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	Fair Value Measurements at Reporting Date Using							
Millions of dollars	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
	December 31, 2013				*December 31, 2012*			
Common stock	$ 302	$ 302			$ 292	$ 292		
Preferred stock	1	1			1	1		
Mutual funds	278	18	$ 260		226	12	$ 214	
Short-term investment vehicles	18		18		18		18	
US Treasury securities	30		30		38		38	
Corporate debt securities	48		48		52		52	
Loans secured by mortgages	11		11		10		10	
Municipals	3		3		4		4	
Limited partnerships	32	1	31		27	1	26	
Multi-strategy hedge funds	69			$ 69	64			$ 64
	$ 792	$ 322	$ 401	$ 69	$ 732	$ 306	$ 362	$ 64

There were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during 2013 or 2012.

The pension plan values common stock, preferred stock and certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds, common collective trusts and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Loans secured by mortgages are valued using observable prices based on trade data for identical or comparable instruments. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

	Fair Value Measurements Level 3	
Millions of dollars	**2013**	**2012**
Beginning Balance	$ 64	$ 60
Unrealized gains included in changes in net assets	5	4
Purchases, issuances, and settlements	—	—
Transfers in or out of Level 3	—	—
Ending Balance	$ 69	$ 64

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from SCE&G's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	Pension Benefits	Other Postretirement Benefits
2014	$ 61.5	$ 9.3
2015	61.2	10.0
2016	63.8	10.6
2017	65.8	11.1
2018	66.1	11.6
2019 - 2023	338.4	65.1

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, SCE&G does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

SCE&G records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

Millions of dollars	Pension Benefits 2013	Pension Benefits 2012	Pension Benefits 2011	Other Postretirement Benefits 2013	Other Postretirement Benefits 2012	Other Postretirement Benefits 2011
Service cost	$ 17.6	$ 15.7	$ 14.7	$ 4.6	$ 3.7	$ 3.4
Interest cost	32.6	36.4	37.0	8.7	9.4	9.6
Expected return on assets	(51.9)	(50.4)	(54.2)	n/a	n/a	n/a
Prior service cost amortization	5.0	6.0	6.0	0.6	0.7	0.8
Amortization of actuarial losses	14.3	15.6	10.4	2.6	1.1	0.3
Curtailment	8.4	—	—	—	—	—
Transition obligation amortization	—	—	—	—	—	(0.1)
Net periodic benefit cost	$ 26.0	$ 23.3	$ 13.9	$ 16.5	$ 14.9	$ 14.0

Prior to July 15, 2010, the SCPSC allowed SCE&G to defer as a regulatory asset the amount of pension cost exceeding amounts included in rates for its retail electric and gas distribution regulated operations. In connection with the SCPSC's July 2010 electric rate order and November 2010 natural gas RSA order, SCE&G began deferring, as a regulatory asset, all pension costs related to retail electric and gas operations that otherwise would have been charged to expense. Effective in January 2013, in connection with the December 2012 rate order, SCE&G began amortizing previously deferred pension cost related to retail electric operations totaling approximately $63 million over approximately 30 years (see Note 2) and recovering current pension costs related to retail electric operations through a rate rider that may be adjusted annually. Similarly, in connection with the October 2013 RSA order, deferred pension cost related to gas operations of approximately $14 million is being amortized over approximately 14 years, and effective November 2013, SCE&G is recovering current pension expense related to gas operations through cost of service rates (see Note 2).

Other changes in plan assets and benefit obligations recognized in other comprehensive income (net of tax) were as follows:

Millions of dollars	Pension Benefits 2013	Pension Benefits 2012		Pension Benefits 2011	Other Postretirement Benefits 2013	Other Postretirement Benefits 2012		Other Postretirement Benefits 2011
Current year actuarial (gain) loss	$ (0.8)	$ 0.4		$ 0.7	$ (0.4)	$ 0.7	—	$ 0.1
Amortization of actuarial losses	(0.1)	(0.1)		(0.1)	(0.1)	—	—	—
Amortization of prior service cost	—	(0.1)	—	(0.1)	—	(0.1)	—	—
Prior service cost (credit)	—	—	400,000	—	—	—	—	—
Amortization of transition obligation	—	—	—	—	—	—		—
Total recognized in other comprehensive income (loss)	$ (0.9)	$ 0.2	400,000	$ 0.5	$ (0.5)	$ 0.6		$ 0.1

Other changes in plan assets and benefit obligations recognized in regulatory assets were as follows:

Millions of dollars	Pension Benefits 2013	Pension Benefits 2012		Pension Benefits 2011	Other Postretirement Benefits 2013	Other Postretirement Benefits 2012		Other Postretirement Benefits 2011
Current year actuarial (gain) loss	$ (137.1)	$ 37.9		$ 61.8	$ (24.4)	$ 25.7	—	$ 5.0
Amortization of actuarial losses	(12.7)	(14.0)		(9.3)	(2.2)	(1.0)	—	(0.2)
Amortization of prior service cost	(4.5)	(5.7)	—	(5.5)	(0.5)	(0.7)	—	(0.7)
Prior service cost (credit)	(7.7)	—	400,000	—	—	—	—	—
Amortization of transition obligation	—	—	—	—	(0.1)	(0.2)		(0.2)
Total recognized in regulatory assets	$ (162.0)	$ 18.2		$ 47.0	$ (27.2)	$ 23.8		$ 3.9

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
	2013	2012	2011	2013	2012	2011
Discount rate	4.10%/5.07%	5.25%	5.56%	4.19%	5.35%	5.72%
Expected return on plan assets	8.00%	8.25%	8.25%	n/a	n/a	n/a
Rate of compensation increase	3.75%/3.00%	4.00%	4.00%	3.75%	4.00%	4.00%
Health care cost trend rate	n/a	n/a	n/a	7.80%	8.20%	8.00%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2017

Net periodic benefit cost for the period through September 1, 2013, was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The actuarial loss and prior service cost to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2014 are insignificant.

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2014 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 3.7	$ 0.3
Prior service cost	3.1	0.3
Total	$ 6.8	$ 0.6

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

Stock Purchase Savings Plan

SCE&G participates in a SCANA-sponsored defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. SCE&G provides 100% matching contributions up to 6% of an employee's eligible earnings. Total matching contributions made to the plan for 2013, 2012 and 2011 were $18.7million, $17.7 million and $17.3 million, respectively, and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

SCE&G participates in the LTECP which provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA's common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation costs related to share-based payment transactions are required to be recognized in the financial statements. With limited exceptions, including those liability awards discussed below, compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

Liability Awards

The 2011-2013, 2012-2014, and 2013-2015 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three-year performance cycle. In each of the performance cycles, 20% of the performance award was granted in the form of restricted share units, which are liability awards payable in cash and are subject to forfeiture in the event of retirement or termination of employment prior to the end of the cycle, subject to exceptions for death, disability or change in control. The remaining 80% of the award was granted in performance shares. Each performance share has a value that is equal to, and changes with, the value of a share of SCANA common stock. Dividend equivalents are accrued on the performance shares and the restricted share units. Payouts of performance share awards are determined by SCANA's performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in "GAAP-adjusted net earnings per share from operations" (weighted 50%).

Compensation cost of liability awards is recognized over their respective three-year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2011-2013 performance cycle were paid in cash at SCANA's discretion in February 2014. Cash-settled liabilities related to prior program cycles were paid totaling approximately $3.2 million in 2013, $8.7 million in 2012 and $2.5 million in 2011.

Fair value adjustments for performance awards resulted in compensation expense recognized in the statements of income totaling $ 5.5 million in 2013, $9.5 million in 2012 and $4.0 million in 2011. Fair value adjustments resulted in capitalized compensation costs of $ 0.5 million in 2013, $2.1 million in 2012 and $0.2 million in 2011.

Equity Awards

No equity awards were made during any period presented, and the effects of previous such awards on Consolidated SCE&G's results of operations, cash flows and financial position were not significant.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.6 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million in limits of accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $41.6 million

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Consolidated SCE&G's results of operations, cash flows and financial position.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. SCE&G's share of the estimated cash outlays (future value, excluding AFC) totals approximately $5.4 billion for plant and related transmission infrastructure costs, and is projected based on historical one-year and five-year escalation rates as required by the SCPSC.

SCE&G's current ownership share in the New Units is 55%. Under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units. Under the terms of this agreement SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. Under the terms of the agreement SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of conveyance, which SCE&G estimates will be approximately $500 million for the entire 5% interest. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments would be reflected in a revised rates filing under the BLRA.

The Consortium has experienced delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules are a focus area of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01 are considered critical path items for both New Units. All sub-modules for CA20 have been received on site and its fabrication is underway. CA20 is expected to be ready for placement on the nuclear island of the first New Unit in the first quarter of 2014. In addition, the delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of the first New Unit during the third quarter of 2014. With this schedule, the Consortium continues to indicate that the substantial completion of the first New Unit is expected to be late 2017 or the first quarter of 2018 and that the substantial completion of the second New Unit is expected to be approximately twelve months after that of the first New Unit. The substantial completion dates currently approved by the SCPSC for the first and second New Units are March 15, 2017 and May 15, 2018, respectively. The SCPSC has also approved an 18-month contingency period beyond each of these dates. The preliminary expected new substantial completion dates are within the contingency periods. SCE&G cannot predict with certainty the extent to which the issue with the sub-modules or the delays in the substantial completion of the New Units will result in increased project costs. However, the preliminary estimate of the delay-related costs associated with SCE&G's 55% share of the New Units is approximately $200 million. SCE&G has not accepted responsibility for any of these delay-related costs and expects to have further discussions with the Consortium regarding such responsibility. Additionally, the EPC Contract provides for liquidated damages in the event of a delay in the completion of the New Units, which will also be included in discussions with the Consortium. SCE&G believes its responsibility for any portion of the $200 million estimate should ultimately be substantially less, once all of the relevant factors are considered.

In addition to the above-described project delays, SCE&G is also aware of financial difficulties at a supplier responsible for certain significant components of the project. The Consortium is monitoring the potential for disruptions in such equipment fabrication and possible responses. Any disruptions could impact the project's schedule or costs, and such impacts could be material.

The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve issues that arise during the course of constructing a project of this magnitude. During the course of activities under the EPC Contract, issues have materialized that impact project budget and schedule. Claims specifically relating to COL delays, design modifications of the shield building and certain pre-fabricated modules for the New Units and unanticipated rock conditions at the site resulted in assertions of contractual entitlement to recover additional costs to be incurred. The resolution of these specific claims is discussed in Note 2. SCE&G expects to resolve any disputes that arise in the future, including any which may arise with respect to the delay-related costs discussed above, through both the informal and formal procedures and anticipates that any additional costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedule and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement schedules, construction work crew assignments, and other items. The result will be a revised fully integrated construction schedule that will provide detailed and itemized information on individual budget and cost categories, cost estimates at completion for all non-firm and fixed scopes of work, and the timing of specific construction activities and cash flow requirements. SCE&G anticipates that the revised schedule and the cost estimate at completion for all non-firm and fixed scopes of work will be finalized in the third quarter of 2014. SCE&G plans to reevaluate and reschedule its owners cost estimates and cash flow requirements in light of the new schedule.

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. These conditions and requirements are responsive to the NRC's Near-Term Task Force report titled "Recommendations for Enhancing Reactor Safety in the 21st Century." This report was prepared in the wake of the March 2011 earthquake-generated tsunami, which severely damaged several nuclear generating units and their back-up cooling systems in Japan. SCE&G continues to evaluate the impact of these conditions and requirements that may be imposed on the construction and operation of the New Units, and SCE&G, pursuant to the license condition, prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. SCE&G cannot predict what additional regulatory or other outcomes may be implemented in the United States, or how such initiatives would impact SCE&G's existing Summer Station or the construction or operation of the New Units.

Subject to a national megawatt capacity limitation, the electricity to be produced by the New Units (advanced nuclear units, as defined) is expected to qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code. Following the pouring of safety-related concrete for each of the New Units' reactor buildings (March 2013 for the first New Unit and November 2013 for the second New Unit), SCE&G has applied to the IRS for its allocations of such national megawatt capacity limitation. The IRS will forward the applications to the DOE for appropriate certification.

Environmental

As part of the President's Climate Action Plan and by Presidential Memorandum issued June 25, 2013, the EPA was directed to issue a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The rule became final on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. Consolidated SCE&G is evaluating the final rule, but does not plan to construct new coal-fired units in the near future. The Memorandum also directed the EPA to issue standards, regulations, or guidelines for existing units by June 1, 2014, to be made final no later than June 1, 2015. Consolidated SCE&G also cannot predict when rules will become final for existing units, if at all, or what conditions they may impose on Consolidated SCE&G, if any. Consolidated SCE&G expects that any costs incurred to comply with GHG emission requirements will be recoverable through rates.

From a regulatory perspective, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed below.

In 2005, the EPA issued the CAIR, which required the District of Columbia and 28 states to reduce nitrogen oxide and sulfur dioxide emissions in order to attain mandated state levels. CAIR set emission limits to be met in two phases beginning in 2009 and 2015, respectively, for nitrogen oxide and beginning in 2010 and 2015, respectively, for sulfur dioxide. SCE&G and GENCO determined that additional air quality controls would be needed to meet the CAIR requirements. On July 6, 2011 the EPA issued the CSAPR. This rule replaced CAIR and the Clean Air Transport Rule proposed in July 2010 and is aimed at addressing power plant emissions that may contribute to air pollution in other states. CSAPR requires states in the eastern United States to reduce power plant emissions, specifically sulfur dioxide and nitrogen oxide. On December 30, 2011, the United States Court of Appeals for the District of Columbia issued an order staying CSAPR and reinstating CAIR pending resolution of an appeal of CSAPR. On August 21, 2012, the Court of Appeals vacated CSAPR and left CAIR in place. The EPA's petition for rehearing of the Court of Appeals' order was denied. In June 2013 the U.S. Supreme Court agreed to review the Court of Appeals' decision and oral arguments were held on December 10, 2013. A decision is still pending. Air quality control installations that SCE&G and GENCO have already completed have allowed Consolidated SCE&G to comply with the reinstated CAIR and will also allow it to comply with CSAPR, if reinstated. Consolidated SCE&G will continue to pursue strategies to comply with all applicable environmental regulations. Any costs incurred to comply with such regulations are expected to be recoverable through rates.

In April 2012, the EPA's rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for facilities to meet the standards, and Consolidated SCE&G's evaluation of the rule is ongoing. SCE&G's decision in 2012 to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in Consolidated SCE&G's compliance with the EPA's rule. Any costs incurred to comply with this rule or other rules issued by the EPA in the future are expected to be recoverable through rates.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility's NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized May 22, 2014. The EPA expects compliance as soon as possible after July 2017 but no later than July 2020.

Additionally, the EPA is expected to issue a rule that modifies requirements for existing cooling water intake structures in early 2014. Consolidated SCE&G is conducting studies and is developing or implementing compliance plans for these initiatives. Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones. These provisions, if passed, could have a material impact on the financial condition, results of operations and cash flows of SCE&G and GENCO. Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

In response to a federal court order to establish a definite timeline for a CCR rule, the EPA has said it will issue new federal regulations affecting the management and disposal of CCRs, such as ash, by December 2014. Such regulations could result in the treatment of some CCRs as hazardous waste and could impose significant costs to utilities, such as SCE&G and GENCO. While Consolidated SCE&G cannot predict how extensive the regulations will be, Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2013, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017, and has commenced construction of a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. In addition, the state of South Carolina has similar laws. SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify SCE&G that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue until 2017 and will cost an additional $20.2 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2013, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $36.7 million and are included in regulatory assets.

Claims and Litigation

Consolidated SCE&G is engaged in various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on Consolidated SCE&G's results of operations, cash flows or financial condition.

Operating Lease Commitments

Consolidated SCE&G is obligated under various operating leases for vehicles, office space, furniture and equipment. Leases expire at various dates through 2057. Rent expense totaled approximately $ 13.6 million in 2013, $9.6 million in 2012 and $10.8 million in 2011. Future minimum rental payments under such leases are as follows:

	Millions of dollars	
2014	$	4
2015		3
2016		2
2017		1
2018		1
Thereafter		19
Total	$	30

Asset Retirement Obligations

Consolidated SCE&G recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that result from their acquisition, construction, development and normal operation relate primarily to Consolidated SCE&G's regulated utility operations. As of December 31, 2013, Consolidated SCE&G has recorded AROs of approximately $191 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $356 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations is as follows:

Millions of dollars		2013		2012
Beginning balance	$	535	$	450
Liabilities incurred		5		—
Liabilities settled		(4)		(5)
Accretion expense		24		23
Revisions in estimated cash flows		(13)		67
Ending Balance	$	547	$	535

11. AFFILIATED TRANSACTIONS

CGT transports natural gas to SCE&G to serve retail gas customers and certain electric generation requirements. Such purchases totaled approximately $33.3 million in 2013, $35.9 million in 2012 and $30.8 million in 2011. SCE&G had approximately $3.3 million and $3.4 million payable to CGT for transportation services at December 31, 2013 and December 31, 2012, respectively. SCE&G had approximately $1.3 million receivable from CGT for transportation services at December 31, 2013 and an insignificant receivable amount at December 31, 2012.

SCE&G purchases natural gas and related pipeline capacity from SEMI to serve its retail gas customers and certain electric generation requirements. Such purchases totaled approximately $166.9 million in 2013, $125.5 million in 2012 and $187.4 million in 2011. SCE&G's payables to SEMI for such purposes were $12.5 million and $13.1 million as of December 31, 2013 and 2012, respectively.

SCE&G owns 40% of Canadys Refined Coal, LLC which is involved in the manufacturing and selling of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G's receivable from this affiliate was $18.0 million at December 31, 2013 and $1.8 million at December 31, 2012. SCE&G's payable to this affiliate was $18.0 million at December 31, 2013 and $1.8 million at December 31, 2012. SCE&G's total purchases to this affiliate were $134.2 million in 2013 and $111.6 million in 2012. SCE&G's total sales to this affiliate were $133.6 million in 2013 and $111.1 million in 2012.

An affiliate processes and pays invoices for Consolidated SCE&G and is reimbursed. Consolidated SCE&G owed $49.1 million and $39.4 million to the affiliate at December 31, 2013 and 2012, respectively, for invoices paid by the affiliate on its behalf.

SCANA Services provides the following services to Consolidated SCE&G, which are rendered at direct or allocated cost: information systems services, customer services, marketing and sales, human resources, corporate compliance, purchasing, financial services, risk management, public affairs, legal services, investor relations, gas supply and capacity management, strategic planning, and general administrative services. Costs for these services totaled $285.6 million in 2013, $305.6 million in 2012 and $302.6 million in 2011.

12. SEGMENT OF BUSINESS INFORMATION

Consolidated SCE&G's reportable segments follow the same accounting policies as those described in Note 1.

Electric Operations is primarily engaged in the generation, transmission, and distribution of electricity, and is regulated by the SCPSC and FERC. Gas Distribution is engaged in the purchase and sale, primarily at retail, of natural gas, and is regulated by the SCPSC.

Disclosure of Reportable Segments (Millions of dollars)

	Electric Operations	Gas Distribution	Adjustments/ Eliminations	Consolidated Total
2013				
External Revenue	$ 2,431	$ 414	—	$ 2,845
Operating Income	679	58	—	737
Interest Expense	19	—	$ 198	217
Depreciation and Amortization	294	26	(7)	313
Segment Assets	9,488	686	2,526	12,700
Expenditures for Assets	907	45	51	1,003
Deferred Tax Assets	10	n/a	(10)	—
2012				
External Revenue	$ 2,453	$ 356	—	$ 2,809
Operating Income	668	49	—	717
Interest Expense	21	—	$ 190	211
Depreciation and Amortization	278	25	(10)	293
Segment Assets	8,989	659	2,456	12,104
Expenditures for Assets	999	56	(77)	978
Deferred Tax Assets	9	n/a	(9)	—
2011				
External Revenue	$ 2,432	$ 387	—	$ 2,819
Operating Income	616	40	$ (2)	654
Interest Expense	23	—	181	204
Depreciation and Amortization	271	25	(10)	286
Segment Assets	8,222	622	2,193	11,037
Expenditures for Assets	806	60	(18)	848
Deferred Tax Assets	9	n/a	(1)	8

Management uses operating income to measure segment profitability for regulated operations and evaluates utility plant, net, for its segments. As a result, Consolidated SCE&G does not allocate interest charges, income tax expense, earnings available to common shareholder or assets other than utility plant to its segments. Intersegment revenue and interest income were not significant. Consolidated SCE&G's deferred tax assets are netted with deferred tax liabilities for reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the reportable segments. Revenues from non-reportable segments are included in Other Income. Segment Assets include utility plant, net for all reportable segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for the segments. Adjustments to Interest Expense and Deferred Tax Assets include amounts that are not allocated to the segments. Expenditures for Assets are adjusted for revisions to estimated cash flows related to asset retirement obligations, and totals not allocated to other segments.

13. QUARTERLY FINANCIAL DATA (UNAUDITED)

Millions of dollars	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Annual
2013					
Total operating revenues	$ 728	$ 696	$ 776	$ 645	$ 2,845
Operating income	191	180	255	111	737
Net Income	92	88	139	72	391
Earnings Available to Common Shareholder	89	85	136	70	380
2012					
Total operating revenues	$ 663	$ 661	$ 777	$ 708	$ 2,809
Operating income	156	165	241	155	717
Net Income	72	78	132	70	352
Earnings Available to Common Shareholder	69	76	129	67	341

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not Applicable.

ITEM 9A. CONTROLS AND PROCEDURES

SCANA:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2013, an evaluation was performed under the supervision and with the participation of SCANA's management, including the CEO and CFO, of the effectiveness of the design and operation of SCANA's disclosure controls and procedures. For purposes of this evaluation, disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by SCANA in the reports that it files or submits under the Securities Exchange Act of 1934 is accumulated and communicated to SCANA's management, including the CEO and CFO, as appropriate to allow timely decisions regarding required disclosure. Based on that evaluation, SCANA's management, including the CEO and CFO, concluded that SCANA's disclosure controls and procedures were effective as of December 31, 2013.

Management's Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2013, an evaluation was performed under the supervision and with the participation of SCANA's management, including the CEO and CFO, of any change in SCANA's internal controls over financial reporting during the quarter ended December 31, 2013. There has been no change in SCANA's internal controls over financial reporting during the quarter ended December 31, 2013 that has materially affected or is reasonably likely to materially affect SCANA's internal control over financial reporting.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002, management is required to include in this Form 10-K an internal control report wherein management states its responsibility for establishing and maintaining adequate internal control structure and procedures for financial reporting and that it has assessed, as of December 31, 2013, the effectiveness of such structure and procedures. This management report follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCANA is responsible for establishing and maintaining adequate internal control over financial reporting. SCANA's internal control system was designed by or under the supervision of SCANA's management, including the CEO and CFO, to provide reasonable assurance to SCANA's management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCANA's management assessed the effectiveness of SCANA's internal control over financial reporting as of December 31, 2013. In making this assessment, SCANA used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control—Integrated Framework (1992)*. Based on this assessment, SCANA's management believes that, as of December 31, 2013, internal control over financial reporting is effective based on those criteria.

SCANA's independent registered public accounting firm has issued an attestation report on SCANA's internal control over financial reporting. This report follows.

ATTESTATION REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the internal control over financial reporting of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2013, based on criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2013, of the Company and our report dated February 28, 2014, expressed an unqualified opinion on those financial statements and financial statement schedule.

/s/DELOITTE & TOUCHE LLP
Charlotte, North Carolina
February 28, 2014

SCE&G:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2013, an evaluation was performed under the supervision and with the participation of SCE&G's management, including the CEO and CFO, of the effectiveness of the design and operation of SCE&G's disclosure controls and procedures. For purposes of this evaluation, disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by SCE&G in the reports that it files or submits under the Securities Exchange Act of 1934 is accumulated and communicated to SCE&G's management, including the CEO and CFO, as appropriate to allow timely decisions regarding required disclosure. Based on that evaluation, SCE&G's management, including the CEO and CFO, concluded that SCE&G's disclosure controls and procedures were effective as of December 31, 2013.

Management's Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2013, an evaluation was performed under the supervision and with the participation of SCE&G's management, including the CEO and CFO, of any change in SCE&G's internal controls over financial reporting during the quarter ended December 31, 2013. There has been no change in SCE&G's internal controls over financial reporting during the quarter ended December 31, 2013 that has materially affected or is reasonably likely to materially affect SCE&G's internal control over financial reporting.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002, management is required to include in this Form 10-K an internal control report wherein management states its responsibility for establishing and maintaining adequate internal control structure and procedures for financial reporting and that it has assessed, as of December 31, 2013, the effectiveness of such structure and procedures. This management report follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCE&G is responsible for establishing and maintaining adequate internal control over financial reporting. SCE&G's internal control system was designed by or under the supervision of SCE&G's management, including the CEO and CFO, to provide reasonable assurance to SCE&G's management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCE&G's management assessed the effectiveness of SCE&G's internal control over financial reporting as of December 31, 2013. In making this assessment, SCE&G used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control-Integrated Framework (1992).* Based on this assessment, SCE&G's management believes that, as of December 31, 2013, internal control over financial reporting is effective based on those criteria.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

SCANA: A list of SCANA's executive officers is in Part I of this annual report at page 25. The other information required by Item 10 is incorporated herein by reference to the captions "NOMINEES FOR DIRECTORS," "CONTINUING DIRECTORS," "BOARD MEETINGS-COMMITTEES OF THE BOARD", "GOVERNANCE INFORMATION-SCANA's Code of Conduct & Ethics" and "OTHER INFORMATION-Section 16(a) Beneficial Ownership Reporting Compliance" in SCANA's definitive proxy statement for the 2014 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 11. EXECUTIVE COMPENSATION

SCANA: The information required by Item 11 is incorporated herein by reference to the captions "Compensation Committee Interlocks and Insider Participation," "Compensation Discussion and Analysis," Compensation Committee Report," "Summary Compensation Table," "2013 Grants of Plan-Based Awards," "Outstanding Equity Awards at 2013 Fiscal Year-End," "2013 Option Exercises and Stock Vested," "Pension Benefits," "2013 Nonqualified Deferred Compensation," and "Potential Payments Upon Termination or Change in Control," under the heading "EXECUTIVE COMPENSATION" and the heading "DIRECTOR COMPENSATION" in SCANA's definitive proxy statement for the 2014 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

SCANA: Information required by Item 12 is incorporated herein by reference to the caption "SHARE OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT" in SCANA's definitive proxy statement for the 2014 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

Equity securities issuable under SCANA's compensation plans at December 31, 2013 are summarized as follows:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
	(a)	(b)	(c)
Equity compensation plans approved by security holders:			
Long-Term Equity Compensation Plan	n/a	n/a	3,138,638
Non-Employee Director Compensation Plan	n/a	n/a	100,886
Equity compensation plans not approved by security holders	n/a	n/a	n/a
Total	n/a	n/a	3,239,524

SCE&G: Not applicable.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

SCANA: The information required by Item 13 is incorporated herein by reference to the caption "RELATED PARTY TRANSACTIONS" in SCANA's definitive proxy statement for the 2014 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

SCANA: The information required by Item 14 is incorporated herein by reference to "PROPOSAL 2-APPROVAL OF THE APPOINTMENT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM" in SCANA's definitive proxy statement for the 2014 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities and Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: The Audit Committee Charter requires the Audit Committee to pre-approve all auditing services and permitted non-audit services (including the fees and terms thereof) to be performed by the independent registered accounting firm. Pursuant to a policy adopted by the Audit Committee, its Chairman may pre-approve the rendering of services on behalf of the Audit Committee. Decisions by the Chairman to pre-approve the rendering of services are presented to the Audit Committee at its next scheduled meeting.

Independent Registered Public Accounting Firm's Fees

The following table sets forth the aggregate fees, all of which were approved by the Audit Committee, charged to SCE&G and its consolidated affiliates for the fiscal years ended December 31, 2013 and 2012 by Deloitte & Touche LLP, the member firms of Deloitte Touche Tohmatsu, and their respective affiliates.

	2013	2012
Audit Fees (1)	$ 1,972,696	$ 1,772,129
Audit-Related Fees (2)	115,706	258,357
Total Fees	$ 2,088,402	$ 2,030,486

(1) Fees for audit services billed in 2013 and 2012 consisted of audits of annual financial statements, comfort letters, statutory and regulatory audits, consents and other services related to SEC filings, and accounting research.

(2) Fees primarily for employee benefit plan audits and, in 2012, for non-statutory audit services.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(a) The following documents are filed or furnished as a part of this Form 10-K:

(1) Financial Statements and Schedules:

The Report of Independent Registered Public Accounting Firm on the financial statements for each of SCANA and SCE&G is listed under Item 8 herein.

The financial statements and supplementary financial data filed as part of this report for SCANA and SCE&G are listed under Item 8 herein.

The financial statement schedules "Schedule II - Valuation and Qualifying Accounts" filed as part of this report for SCANA and SCE&G are included below.

(2) Exhibits

Exhibits required to be filed or furnished with this Annual Report on Form 10-K are listed in the Exhibit Index following the signature page. Certain of such exhibits which have heretofore been filed with the SEC and which are designated by reference to their exhibit number in prior filings are incorporated herein by reference and made a part hereof.

Pursuant to Rule 15d-21 promulgated under the Securities Exchange Act of 1934, the annual report for SCANA's employee stock purchase plan will be furnished under cover of Form 11-K to the SEC when the information becomes available.

As permitted under Item 601(b)(4)(iii) of Regulation S-K, instruments defining the rights of holders of long-term debt of less than 10% of the total consolidated assets of SCANA, for itself and its subsidiaries and of SCE&G, for itself and its consolidated affiliates, have been omitted and SCANA and SCE&G agree to furnish a copy of such instruments to the SEC upon request.

Schedule II—Valuation and Qualifying Accounts
(in millions)

Description		Beginning Balance	Additions: Charged to Income	Additions: Charged to Other Accounts	Deductions from Reserves	Ending Balance
SCANA:						
Reserves deducted from related assets on the balance sheet:						
Uncollectible accounts

CERTIFICATION

I, Kevin B. Marsh, certify that:

1. I have reviewed this annual report on Form 10-K of SCANA Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

CERTIFICATION

I, Jimmy E. Addison, certify that:

1. I have reviewed this annual report on Form 10-K of South Carolina Electric & Gas Company;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

FORM 10-K

SOUTH CAROLINA ELECTRIC & GAS CO - SCG

Filed: February 27, 2015 (period: December 31, 2014)

Annual report with a comprehensive overview of the company

UNITED STATES SECURITIES AND EXCHANGE COMMISSION

Washington, DC 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the Fiscal Year Ended December 31, 2014

Commission File Number	Registrant, State of Incorporation, Address and Telephone Number	I.R.S. Employer Identification No.
1-8809	**SCANA Corporation** (a South Carolina corporation)	**57-0784499**
1-3375	**South Carolina Electric & Gas Company** (a South Carolina corporation) 100 SCANA Parkway, Cayce, South Carolina 29033 (803) 217-9000	**57-0248695**

Securities registered pursuant to Section 12(b) of the Act:

SCANA Corporation: Common stock, without par value, registered on The New York Stock Exchange
2009 Series A 7.70% Enhanced Junior Subordinated Notes, registered on The New York Stock Exchange (deregistered on February 3, 2015)

Securities registered pursuant to Section 12(g) of the Act:
South Carolina Electric & Gas Company: Series A Nonvoting Preferred Shares

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
SCANA Corporation ☒ South Carolina Electric & Gas Company ☒

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act.
SCANA Corporation ☐ South Carolina Electric & Gas Company ☐

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.
SCANA Corporation Yes ☒ No ☐ South Carolina Electric & Gas Company Yes ☒ No ☐

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).
SCANA Corporation Yes ☒ No ☐ South Carolina Electric & Gas Company Yes ☒ No ☐

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.
SCANA Corporation ☒ South Carolina Electric & Gas Company ☒

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company (as defined in Exchange Act Rule 12b-2).

SCANA Corporation	Large accelerated filer ☒	Accelerated filer ☐	Non-accelerated filer ☐	Smaller reporting company ☐
South Carolina Electric & Gas Company	Large accelerated filer ☐	Accelerated filer ☐	Non-accelerated filer ☒	Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Exchange Act Rule 12b-2).
SCANA Corporation Yes ☐ No ☒ South Carolina Electric & Gas Company Yes ☐ No ☒

The aggregate market value of voting stock held by non-affiliates of SCANA Corporation was $7.6 billion at June 30, 2014, the last business day of the registrant's most recently completed second fiscal quarter, based on the closing price of $53.81 per share. South Carolina Electric & Gas Company is a wholly-owned subsidiary of SCANA Corporation and has no voting stock other than its common stock, all of which is held beneficially and of record by SCANA Corporation. A description of registrants' common stock follows:

Registrant	Description of Common Stock	Shares Outstanding at February 20, 2015
SCANA Corporation	Without Par Value	142,916,917
South Carolina Electric & Gas Company	Without Par Value	40,296,147

Documents incorporated by reference: Specified sections of SCANA Corporation's Proxy Statement, in connection with its 2015 Annual Meeting of Shareholders, are incorporated by reference in Part III hereof.

This combined Form 10-K is separately filed by SCANA Corporation and South Carolina Electric & Gas Company. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. Each registrant makes no representation as to information relating to the other company.

South Carolina Electric & Gas Company meets the conditions set forth in General Instruction I(1) (a) and (b) of Form 10-K and therefore is filing this Form with the reduced disclosure format allowed under General Instruction I(2).

TABLE OF CONTENTS

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Statements included in this Annual Report on Form 10-K which are not statements of historical fact are intended to be, and are hereby identified as, "forward-looking statements" for purposes of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements include, but are not limited to, statements concerning key earnings drivers, customer growth, environmental regulations and expenditures, leverage ratio, projections for pension fund contributions, financing activities, access to sources of capital, impacts of the adoption of new accounting rules and estimated construction and other expenditures. In some cases, forward-looking statements can be identified by terminology such as "may," "will," "could," "should," "expects," "forecasts," "plans," "anticipates," "believes," "estimates," "projects," "predicts," "potential" or "continue" or the negative of these terms or other similar terminology. Readers are cautioned that any such forward-looking statements are not guarantees of future performance and involve a number of risks and uncertainties, and that actual results could differ materially from those indicated by such forward-looking statements. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, but are not limited to, the following:

(1) the information is of a preliminary nature and may be subject to further and/or continuing review and adjustment;

(2) legislative and regulatory actions, particularly changes in rate regulation, regulations governing electric grid reliability and pipeline integrity, environmental regulations, and actions affecting the construction of new nuclear units;

(3) current and future litigation;

(4) changes in the economy, especially in areas served by subsidiaries of SCANA;

(5) the impact of competition from other energy suppliers, including competition from alternate fuels in industrial markets;

(6) the impact of conservation and demand side management efforts and/or technological advances on customer usage;

(7) the loss of sales to distributed generation, such as solar photovoltaic systems;

(8) growth opportunities for SCANA's regulated and diversified subsidiaries;

(9) the results of short- and long-term financing efforts, including prospects for obtaining access to capital markets and other sources of liquidity;

(10) the effects of weather, especially in areas where the generation and transmission facilities of SCANA and its subsidiaries (the Company) are located and in areas served by SCANA's subsidiaries;

(11) changes in SCANA's or its subsidiaries' accounting rules and accounting policies;

(12) payment and performance by counterparties and customers as contracted and when due;

(13) the results of efforts to license, site, construct and finance facilities for electric generation and transmission, including nuclear generating facilities, and the results of efforts to operate its electric and gas systems and assets in accordance with acceptable performance standards;

(14) maintaining creditworthy joint owners for SCE&G's new nuclear generation project;

(15) the ability of suppliers, both domestic and international, to timely provide the labor, secure processes, components, parts, tools, equipment and other supplies needed, at agreed upon quality and prices, for our construction program, operations and maintenance;

(16) the results of efforts to ensure the physical and cyber security of key assets and processes;

(17) the availability of fuels such as coal, natural gas and enriched uranium used to produce electricity; the availability of purchased power and natural gas for distribution; the level and volatility of future market prices for such fuels and purchased power; and the ability to recover the costs for such fuels and purchased power;

(18) the availability of skilled and experienced human resources to properly manage, operate, and grow the Company's businesses;

(19) labor disputes;

(20) performance of SCANA's pension plan assets;

(21) changes in taxes and tax credits, including production tax credits for new nuclear units;

(22) inflation or deflation;

(23) compliance with regulations;

(24) natural disasters and man-made mishaps that directly affect our operations or the regulations governing them; and

(25) the other risks and uncertainties described from time to time in the reports filed by SCANA or SCE&G with the SEC.

SCANA and SCE&G disclaim any obligation to update any forward-looking statements.

DEFINITIONS

Abbreviations used in this Form 10-K have the meanings set forth below unless the context requires otherwise:

TERM	MEANING
AFC	Allowance for Funds Used During Construction
ANI	American Nuclear Insurers
AOCI	Accumulated Other Comprehensive Income
ARO	Asset Retirement Obligation
BACT	Best Available Control Technology
BLRA	Base Load Review Act
CAA	Clean Air Act, as amended
CAIR	Clean Air Interstate Rule
CCR	Coal Combustion Residuals
CEO	Chief Executive Officer
CFO	Chief Financial Officer
CFTC	Commodity Futures Trading Commission
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act

Westinghouse	Westinghouse Electric Company LLC
Williams Station	A.M. Williams Generating Station, owned by GENCO
WNA	Weather Normalization Adjustment

PART I

ITEM 1. BUSINESS

INVESTOR INFORMATION

SCANA’s and SCE&G’s annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed with or furnished to the SEC are available free of charge through SCANA’s internet website at *www.scana.com* (which is not intended as an active hyperlink; the information on SCANA’s website is not a part of this report or any other report or document that SCANA or SCE&G files with or furnishes to the SEC) as soon as reasonably practicable after these reports are filed or furnished.

SCANA and SCE&G post information from time to time regarding developments relating to SCE&G’s new nuclear project and other matters of interest to investors on SCANA’s website. On SCANA’s homepage, there is a yellow box containing links to the Nuclear Development and Other Investor Information sections of the website. The Nuclear Development section contains a yellow box with a link to project news and updates. The Other Investor Information section of the website contains a link to recent investor related information that cannot be found at other areas of the website. Some of the information that will be posted from time to time, including the quarterly reports that SCE&G submits to the SCPSC and the ORS in connection with the new nuclear project, may be deemed to be material information that has not otherwise become public. Investors, media and other interested persons are encouraged to review this information and can sign up, under the Investor Relations Section of the website, for an email alert when there is a new posting in the Nuclear Development and Other Investor Information yellow box.

CORPORATE STRUCTURE AND SEGMENTS OF BUSINESS

SCANA is a South Carolina corporation created in 1984 as a holding company. SCANA and its subsidiaries had full-time, permanent employees as of February 20, 2015 and 2014 of 5,886 and 5,989, respectively. SCANA does not directly own or operate any significant physical properties, but it holds directly all of the capital stock of its subsidiaries except as described below, each of which is incorporated in South Carolina.

Regulated Utilities

SCE&G is engaged in the generation, transmission, distribution and sale of electricity to approximately 688,000 customers and the purchase, sale and transportation of natural gas to approximately 338,000 customers (each as of December 31, 2014). SCE&G’s business experiences seasonal fluctuations, with generally higher sales of electricity during the summer and winter months because of air conditioning and heating requirements, and generally higher sales of natural gas during the winter months due to heating requirements. SCE&G’s electric service territory extends into 24 counties covering nearly 17,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 36 counties in South Carolina and covers approximately 23,000 square miles. More than 3.3 million persons live in the counties where SCE&G conducts its business. Resale customers include municipalities, electric cooperatives, other investor-owned utilities, registered marketers and federal and state electric agencies. Predominant industries served by SCE&G include chemicals, educational services, paper products, food products, lumber and wood products, health services, textile manufacturing, rubber and miscellaneous plastic products and fabricated metal products.

GENCO owns Williams Station and sells electricity, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a power purchase agreement and related operating agreement. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission allowances.

PSNC Energy purchases, sells and transports natural gas to approximately 521,000 residential, commercial and industrial customers (as of December 31, 2014). PSNC Energy serves 28 franchised counties covering approximately 12,000 square miles in North Carolina. The predominant industries served by PSNC Energy include educational services, food products, health services, automotive, chemicals, non-woven textiles, electrical generation and construction.

CGT operates as an open access, transportation-only interstate pipeline company regulated by FERC. CGT operates in southeastern Georgia and in South Carolina and has interconnections with Southern Natural at Port Wentworth, Georgia and with Southern LNG, Inc. at Elba Island, near Savannah, Georgia. CGT also has interconnections with Southern Natural in Aiken County, South Carolina, and with Transco in Cherokee and Spartanburg counties, South Carolina. CGT’s customers include SCE&G (which uses natural gas for electricity generation and for gas distribution to retail customers), SEMI (which markets natural gas to industrial and sale for resale customers, primarily in the Southeast), municipalities, county gas authorities, federal and state agencies, marketers, power generators and industrial customers primarily engaged in the manufacturing or processing of ceramics, paper, metal, and textiles. In December 2014, SCANA announced that CGT would be sold to Dominion Resources, Inc. The sale closed at the end of January 2015.

Nonregulated Businesses

SEMI markets natural gas primarily in the southeast and provides energy-related services. SCANA Energy, a division of SEMI, sells natural gas to approximately 459,000 customers (as of December 31, 2014, and includes approximately 66,000 customers in its regulated division) in Georgia's natural gas market. SCANA Energy's total customer base represents an approximately 30% share of the approximately 1.6 million customers in Georgia's deregulated natural gas market. SCANA Energy remains the second largest natural gas marketer in Georgia.

SCI owns and operates a fiber optic telecommunications network, ethernet network and data center facilities in South Carolina, and through a joint venture, SCI has an additional interest in fiber in South Carolina, North Carolina and Georgia. SCI also provides tower site construction, management and rental services and sells towers in South Carolina, North Carolina and Tennessee. SCI leases fiber optic capacity, data center space and tower space to certain affiliates at market rates. In December 2014, SCANA announced that SCI would be sold to Spirit Communications. The sale closed in February 2015.

SCANA Services, Inc. provides primarily administrative and management services to SCANA's other subsidiaries.

In addition, SCANA owns two insignificant energy-related companies that are being liquidated.

For information with respect to major segments of business, see Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G and the consolidated financial statements for SCANA and SCE&G (Note 12). All such information is incorporated herein by reference.

COMPETITION

For a discussion of the impact of competition, see the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

For a discussion of cash requirements for construction and nuclear fuel expenditures, contractual cash obligations, financing limits, financing transactions and other related information, see the Liquidity and Capital Resources section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

ELECTRIC OPERATIONS

Electric Sales

SCE&G's sales of electricity and margins earned from those sales by customer classification as percentages of electric revenues were as follows:

	Sales		Margins	
Customer Classification	**2013**	**2014**	**2013**	**2014**
Residential	44%	45%	50%	50%
Commercial	33%	32%	33%	33%
Industrial	18%	18%	14%	14%
Sales for resale	2%	2%	1%	1%
Other	3%	3%	2%	2%
Total	100%	100%	100%	100%

Sales for resale include sales to three municipalities and one electric cooperative. Short-term system sales were not significant for any period presented.

During 2014 SCE&G experienced a net increase of approximately 10,000 electric customers (growth rate of 1.4%), increasing its total electric customers to approximately 688,000 at year end.

For the period 2015-2017, SCE&G projects total territorial kWh sales of electricity to increase 1.1% annually (assuming normal weather), total retail sales growth of 1.1% annually (assuming normal weather), total electric customer base to increase 1.8% annually and territorial peak load (summer, in MW) to increase 1.9% annually. SCE&G projects a retail kWh sales decrease of approximately 3.0% and customer growth of 1.4% from 2014 to 2015. SCE&G's goal is to maintain a planning reserve margin of between 14% and 20%; however, weather and other factors affect territorial peak load and can cause actual generating capacity on any given day to fall below the reserve margin goal.

Electric Interconnections

SCE&G purchases all of the electric generation of GENCO's Williams Station under a Unit Power Sales Agreement which has been approved by FERC. Williams Station has a net generating capacity (summer rating) of 605 MW.

SCE&G's transmission system, which extends over a large part of the central, southern and southwestern portions of South Carolina, interconnects with Duke Energy Carolinas, LLC, Duke Energy Progress, Inc., Santee Cooper, Georgia Power Company and the Southeastern Power Administration's Clarks Hill (Thurmond) Project. SCE&G is a member of VACAR, one of several geographic divisions within the SERC. SERC is one of eight regional entities with delegated authority from NERC for the purpose of proposing and enforcing reliability standards approved by FERC. SERC is divided geographically into five diverse sub-regions that are identified as Central, Delta, Gateway, Southeastern and VACAR. The regional entities and all members of NERC work to safeguard the reliability of the bulk power systems throughout North America. For a discussion of the impact certain legislative and regulatory initiatives may have on SCE&G's transmission system, see Electric Operations within the Overview section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

Fuel Costs and Fuel Supply

The average cost of various fuels and the weighted average cost of all fuels (including oil) were as follows:

	Cost of Fuel Used		
	2012	**2013**	**2014**
Per MMBTU:			
Nuclear	$ 0.94	$ 1.11	$ 1.01
Coal	4.49	4.28	3.90
Natural Gas	3.71	4.63	5.19
All Fuels (weighted average)	3.56	3.53	3.62
Per Ton: Coal	111.72	104.63	96.74
Per MCF: Gas	3.80	4.69	5.30

The sources and percentages of total MWh generation by each category of fuel for the preceding three years and estimates for the next three years follow:

	% of Total MWh Generated					
	Actual			Estimated		
	2012	**2013**	**2014**	**2015**	**2016**	**2017**
Coal	50%	45%	50%	47%	42%	44%
Nuclear	19%	24%	19%	20%	24%	21%
Hydro	3%	4%	3%	3%	3%	3%
Natural Gas & Oil	28%	26%	26%	28%	29%	30%
Biomass	—	1%	2%	2%	2%	2%
Total	100%	100%	100%	100%	100%	100%

In 2014, the Company used coal to generate electricity at five fossil fuel-fired plants, including its cogeneration facility located in Charleston, South Carolina. Unit trains and, in some cases, trucks and barges delivered coal to these plants. SCE&G intends to retire the coal-fired generating units at one of these plants by 2020, subject to future developments in environmental regulations, among other matters. See Item 2. PROPERTIES.

Coal is primarily obtained through long-term supply contracts. Long-term contracts exist with suppliers located in eastern Kentucky, Tennessee, Virginia, and West Virginia. These contracts provide for approximately 3.0 million tons annually. Sulfur restrictions on the contract coal range from .75% to 1.6%. These contracts expire at various times through 2016. Spot market purchases may occur when needed or when prices are believed to be favorable.

SCANA and SCE&G believe that SCE&G's operations comply with all applicable regulations relating to the discharge of sulfur dioxide and nitrogen oxide. See additional discussion at Environmental Matters in Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G, for itself and as agent for Santee Cooper, and Westinghouse are parties to a fuel alliance agreement and contracts for fuel fabrication and related services. Under these contracts, SCE&G has to supply enriched product to Westinghouse and Westinghouse will supply nuclear fuel assemblies for Summer Station Unit 1 and the New Units. Westinghouse will be SCE&G's exclusive provider of such fuel assemblies on a cost-plus basis. The fuel assemblies to be delivered under the contracts are expected to supply the nuclear fuel requirements of Summer Station Unit 1 and the New Units through 2033. SCE&G is dependent upon Westinghouse for providing fuel assemblies for the new AP1000 reactors in the New Units in the current and anticipated future absence of other commercially viable sources.

In addition, SCE&G has contracts covering its nuclear fuel needs for uranium, conversion services and enrichment services. These contracts have varying expiration dates through 2024. SCE&G believes that it will be able to renew contracts as they expire or enter into similar contractual arrangements with other suppliers of nuclear fuel materials and services and that sufficient capacity for nuclear fuel supplies and processing exists to preclude the impairment of normal operations of its nuclear generating units.

SCE&G can store spent nuclear fuel on-site until at least 2017 and is constructing a dry cask storage facility to accommodate the spent fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available. In addition, Summer Station Unit 1 has sufficient on-site storage capacity to permit storage of the entire reactor core in the event that complete unloading should become desirable or necessary. For information about the contract with the DOE regarding disposal of spent fuel, see the Environmental section of Note 10 to the consolidated financial statements of SCANA and SCE&G.

SCE&G also uses long-term power purchase agreements to ensure that adequate power supply resources are in place to meet load obligations and reserve requirements. As of December 31, 2014, SCE&G had such agreements in place for 300 MW of capacity.

GAS OPERATIONS

Gas Sales-Regulated

Regulated sales of natural gas by customer classification as a percent of total regulated gas revenues sold or transported were as follows:

	SCANA		SCE&G	
Customer Classification	**2013**	**2014**	**2013**	**2014**
Residential	55.6%	54.9%	43.5%	44.1%
Commercial	26.0%	26.5%	27.4%	28.2%
Industrial	12.5%	12.4%	25.6%	24.6%
Transportation Gas	5.9%	6.2%	3.5%	3.1%
Total	100.0%	100.0%	100.0%	100.0%

For the period 2015-2017, SCANA projects total consolidated sales of regulated natural gas in MMBTUs to increase 1.6% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.5%, commercial of 1.0% and industrial of 0.5%.

For the period 2015-2017, SCE&G projects total consolidated sales of regulated natural gas in MMBTUs to increase 1.2% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.5%, commercial of 0.6% and industrial of 0.7%.

For the period 2015-2017, SCANA's and SCE&G's total consolidated regulated natural gas customer base is projected to increase annually 2.4% and 2.3%, respectively. During 2014 SCANA recorded a net increase of approximately 22,000 regulated gas customers (growth rate of 2.6%), increasing its regulated gas customers to approximately 859,000. Of this increase, SCE&G recorded a net increase of approximately 9,000 gas customers (growth rate of 2.8%), increasing its total gas customers to approximately 338,000 (as of December 31, 2014).

Demand for gas changes primarily due to weather and the price relationship between gas and alternate fuels.

Gas Cost, Supply and Curtailment Plans

SCE&G purchases natural gas under contracts with producers and marketers in both the spot and long-term markets. The gas is delivered to South Carolina through firm transportation agreements with Southern Natural (expiring in 2018), Transco (expiring in 2017 and 2018) and CGT (expiring in 2017, 2018, 2019, 2023 and 2026). The maximum daily volume of gas that SCE&G is entitled to transport under these contracts is 212,194 MMBTU from Southern Natural, 64,652 MMBTU from Transco and 431,229 MMBTU from CGT. Additional natural gas volumes may be delivered to SCE&G's system as capacity is available through interruptible transportation.

The daily volume of gas that SEMI is entitled to transport under service agreements with CGT (expiring in 2016, 2017 and 2023) on a firm basis is 82,615 MMBTU.

SCE&G purchased natural gas, including fixed transportation, at an average cost of $5.94 per MMBTU during 2014 and $5.27 per MMBTU during 2013.

SCE&G was allocated 5,502,600 MMBTU of natural gas storage capacity on the systems of Southern Natural and Transco. Approximately 4,657,900 MMBTU of gas were in storage on December 31, 2014. To meet the requirements of its high priority natural gas customers during periods of maximum demand, SCE&G supplements its supplies of natural gas with two LNG liquefaction and storage facilities. The LNG plants are capable of storing the liquefied equivalent of 1,964,600 MMBTU of natural gas. Approximately 1,844,800 MMBTU (liquefied equivalent) of gas were in storage on December 31, 2014.

PSNC Energy purchases natural gas under contracts with producers and marketers on a short-term basis at market based prices and on a long-term basis for reliability assurance at first of the month index prices plus a reservation charge in certain cases. Transco transports natural gas to North Carolina through transportation agreements with varying expiration dates through 2032. On a peak day, PSNC Energy is capable of receiving daily transportation volumes of natural gas under these contracts, utilizing firm contracts of 610,062 MMBTU from Transco.

PSNC Energy purchased natural gas, including fixed transportation, at an average cost of $5.67 per MMBTU during 2014 compared to $5.13 per MMBTU during 2013.

To meet the requirements of its high priority natural gas customers during periods of maximum demand, PSNC Energy supplements its supplies of natural gas with underground natural gas storage services and LNG peaking services. Underground natural gas storage service agreements with Dominion Transmission, Inc., Columbia Gas Transmission, Transco and Spectra Energy provide for storage capacity of approximately 13,000,000 MMBTU. Approximately 11,000,000 MMBTU of gas were in storage under these agreements at December 31, 2014. In addition, PSNC Energy's LNG facility can store the liquefied equivalent of 1,000,000 MMBTU of natural gas with regasification capability of approximately 100,000 MMBTU per day. Approximately 900,000 MMBTU (liquefied equivalent) of gas were in storage at December 31, 2014. LNG storage service agreements with Transco, Cove Point LNG and Pine Needle LNG provide for 1,300,000 MMBTU (liquefied equivalent) of storage space. Approximately 1,100,000 MMBTU (liquefied equivalent) were in storage under these agreements at December 31, 2014.

SCANA and SCE&G believe that supplies under long-term contracts and supplies available for spot market purchase are adequate to meet existing customer demands and to accommodate growth.

Gas Marketing-Nonregulated

SEMI markets natural gas and provides energy-related services primarily in the Southeast. In addition, SCANA Energy, a division of SEMI, markets natural gas to approximately 459,000 customers (as of December 31, 2014) in Georgia's natural gas market. SCANA Energy's total customer base represents an approximate 30% share of the approximately

1.6 million customers in Georgia’s deregulated natural gas market. SCANA Energy remains the second largest natural gas marketer in the state.

Risk Management

For a discussion of risk management policies and procedures, see Note 6 to the consolidated financial statements for SCANA and SCE&G.

REGULATION

Regulatory jurisdictions to which SCANA and its subsidiaries are subject are described in the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

SCE&G holds licenses under the Federal Power Act for each of its hydroelectric projects. The licenses expire as follows:

Project	**License Expiration**
Saluda (Lake Murray)	*
Fairfield Pumped Storage/Parr Shoals	2020
Stevens Creek	2025
Neal Shoals	2036

* SCE&G presently operates the Saluda hydroelectric project under an annual license while its long-term re-licensing application is being reviewed by FERC.

At the termination of a license under the Federal Power Act, FERC may extend or issue a new license to the previous licensee, or may issue a license to another applicant, or the federal government may take over the related project. If the federal government takes over a project or if FERC issues a license to another applicant, the federal government or the new licensee, as the case may be, must pay the previous licensee an amount equal to its net investment in the project, not to exceed fair value, plus severance damages.

RATE MATTERS

For a discussion of the impact of various rate matters, see the Regulatory Matters section of Management’s Discussion and Analysis of Financial Condition and Results of Operations for SCANA and SCE&G, and Note 2 to the consolidated financial statements for SCANA and SCE&G.

Fuel Cost Recovery Procedures

The SCPSC’s fuel cost recovery procedure determines the fuel component in SCE&G’s retail electric base rates annually based on projected fuel costs for the ensuing 12-month period, adjusted for any over-collection or under-collection from the preceding 12-month period. The statutory definition of fuel costs includes certain variable environmental costs, such as ammonia, lime, limestone and catalysts consumed in reducing or treating emissions. The definition also includes the cost of emission allowances used for sulfur dioxide, nitrogen oxide, mercury and particulates. In 2014, the South Carolina General Assembly amended the statutory definition of fuel cost thereby allowing electric utilities to recover avoided costs under the Public Utility Regulatory Policy Act of 1978. The South Carolina General Assembly further amended the fuel cost statute to allow for the recovery of costs incurred as a result of offering distributed energy resource programs and net metering to its customers as a separate component of the overall fuel factor. SCE&G may request a formal proceeding concerning its fuel costs at any time.

Fuel cost recovery procedures related to the natural gas operations of SCE&G and PSNC Energy along with related rate proceedings by the SCPSC and NCUC are described in Note 2 to the consolidated financial statements for SCANA and SCE&G.

ENVIRONMENTAL MATTERS

Federal and state authorities have imposed environmental regulations and standards relating primarily to air emissions, wastewater discharges and solid, toxic and hazardous waste management. Developments in these areas may require that equipment and facilities be modified, supplemented or replaced. The ultimate effect of any new or pending regulations or standards upon existing operations cannot be predicted. For a discussion of how these regulations and standards may impact SCANA and SCE&G (including capital expenditures necessitated thereby), see the Environmental Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 10 to the consolidated financial statements for SCANA and SCE&G.

OTHER MATTERS

Insurance coverage for SCE&G's nuclear units is described in Note 10 to the consolidated financial statements for SCANA and SCE&G.

ITEM 1A. RISK FACTORS

The risk factors that follow relate in each case to the Company, and where indicated the risk factors also relate to Consolidated SCE&G.

Commodity price changes, delays and other factors may affect the operating cost, capital expenditures and competitive positions of the Company's and Consolidated SCE&G's energy businesses, thereby adversely impacting results of operations, cash flows and financial condition.

Our energy businesses are sensitive to changes in coal, natural gas, uranium and other commodity prices (as well as their transportation costs) and availability. Any such changes could affect the prices these businesses charge, their operating costs and the competitive position of their products and services. Consolidated SCE&G is permitted to recover the prudently incurred cost of purchased power and fuel (including transportation) used in electric generation through retail customers' bills, but purchased power and fuel cost increases affect electric prices and therefore the competitive position of electricity against other energy sources. In addition, when natural gas prices are low enough relative to coal to require the dispatch of gas-fired electric generation ahead of coal-fired electric generation, higher inventories of coal, with related increased carrying costs, may result. This may adversely affect our results of operations, cash flows and financial position.

In the case of regulated natural gas operations, costs prudently incurred for purchased gas and pipeline capacity may be recovered through retail customers' bills. However, in both our regulated and deregulated natural gas markets, increases in gas costs affect total retail prices and therefore the competitive position of gas relative to electricity and other forms of energy. Accordingly, customers able to do so may switch to alternative forms of energy and reduce their usage of gas from the Company and Consolidated SCE&G. Customers unable to switch to alternative fuels or suppliers may reduce their usage of gas from the Company and Consolidated SCE&G.

Certain construction-related commodities, such as copper and aluminum used in our transmission and distribution lines and in our electrical equipment, and steel, concrete and rare earth elements, have experienced significant price fluctuations due to changes in worldwide demand. To operate our air emissions control equipment, we use significant quantities of ammonia, limestone and lime. With EPA-mandated industry-wide compliance requirements for air emissions controls, increased demand for these reagents, combined with the increased demand for low sulfur coal, may result in higher costs for coal and reagents used for compliance purposes.

The costs of large capital projects, such as the Company's and Consolidated SCE&G's construction for environmental compliance and its construction of the New Units and associated transmission, are significant and are subject to a number of risks and uncertainties that may adversely affect the cost, timing and completion of the projects.

The Company's and Consolidated SCE&G's businesses are capital intensive and require significant investments in energy generation and in other internal infrastructure projects, including projects for environmental compliance. For example, SCE&G and Santee Cooper have agreed to jointly own, contract the design and construction of, and operate the New Units, which will be two 1,250 MW (1,117 MW, net) nuclear units at SCE&G's Summer Station, in pursuit of which they have committed and are continuing to commit significant resources. In addition, construction of significant new transmission infrastructure is necessary to support the New Units and is under way as an integral part of the project. Achieving the intended benefits of any large construction project is subject to many uncertainties. For instance, the ability to adhere to established budgets and timeframes may be affected by many variables, such as the regulatory and legal processes associated with securing approvals, permits and licenses and necessary amendments to them within projected timeframes, the availability of labor and materials at estimated costs, the availability and cost of financing, and weather. There also may be contractor or supplier performance issues or adverse changes in their creditworthiness, and unforeseen difficulties meeting critical regulatory requirements. There may be unforeseen engineering problems or unanticipated changes in project design or scope. Our ability to complete construction projects (including new baseload generation) as well as our ability to maintain current operations at reasonable cost could be affected by the availability of key components or commodities, increases in the price of or the unavailability of labor, commodities or other materials, increases in lead times for components, adverse changes in applicable laws and regulations, new or enhanced environmental requirements, supply chain failures (whether resulting from the foregoing or other factors), and disruptions in the transportation of components, commodities and fuels. Some of the foregoing issues have been experienced in the construction of the New Units. A discussion of certain of those matters can be found under New Nuclear Construction Matters in Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS for SCANA and SCE&G.

Should the construction of the New Units materially and adversely deviate from the schedules, estimates, and projections timely submitted to and approved by the SCPSC pursuant to the BLRA, the SCPSC could disallow the additional capital costs that result from the deviations to the extent that it is deemed that the Company's failure to anticipate or avoid the deviation, or to minimize the resulting expenses, was imprudent, considering the information available at the time. Depending upon the magnitude of any such disallowed capital costs, the Company could be moved to evaluate the prudency of continuation, adjustment to, or termination of the project.

Furthermore, jointly owned projects, such as the current construction of the New Units, are subject to the risk that one or more of the joint owners becomes either unable or unwilling to continue to fund project financial commitments, new joint owners cannot be secured at equivalent financial terms, or changes in the joint ownership make-up will increase project costs and/or delay the completion.

To the extent that delays occur, costs become unrecoverable, or we otherwise become unable to effectively manage and complete our capital projects, our results of operations, cash flows and financial condition, as well as our qualifications for applicable governmental programs and benefits, such as production tax credits, may be adversely affected.

The use of derivative instruments could result in financial losses and liquidity constraints. The Company and Consolidated SCE&G do not fully hedge against financial market risks or price changes in commodities. This could result in increased costs, thereby resulting in lower margins and adversely affecting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G use derivative instruments, including futures, forwards, options and swaps, to manage our financial market risks. The Company also uses such derivative instruments to manage certain commodity (i.e. natural gas) market risk. We could recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities and financial contracts or if a counterparty fails to perform under a contract.

The Company strives to manage commodity price exposure by establishing risk limits and entering into contracts to offset some of our positions (i.e., to hedge our exposure to demand, market effects of weather and other changes in commodity prices). We do not hedge the entire exposure of our operations from commodity price volatility. To the extent we do not hedge against commodity price volatility or our hedges are not effective, results of operations, cash flows and financial condition may be diminished.

Furthermore, Dodd-Frank affects the use and reporting of derivative instruments. The regulations under this legislation provide for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and require numerous rule-makings by the CFTC and the SEC to implement, many of which are still pending final action by those federal agencies. The Company and Consolidated SCE&G have determined that they meet the end-user exception to mandatory clearing of swaps under Dodd-Frank. In addition, the Company and Consolidated SCE&G have taken steps to ensure that they are not the party required to report these transactions in real-time (the "reporting party") by transacting solely with swap dealers, major swap participants and financial institutions, when possible, as well as entering into reporting party agreements with counterparties who also are not swap dealers, major swap participants or financial institutions, which establishes that those counterparties are obligated to report the transactions in accordance with applicable Dodd-Frank regulations. While these actions minimize the reporting obligations of the Company, they do not eliminate required recordkeeping for any Dodd-Frank regulated transactions. Moreover, the Company retains reporting responsibility for certain types of swaps, such as the annual reporting of trade options. Despite qualifying for the end-user exception to mandatory clearing and ensuring that neither the Company nor Consolidated SCE&G is the reporting party to a transaction required to be reported in real-time, we cannot predict when the final regulations will be issued or what requirements they will impose.

Changing and complex laws and regulations to which the Company and Consolidated SCE&G are subject could adversely affect revenues, increase costs, or curtail activities, thereby adversely impacting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G operate under the regulatory authority of the United States government and its various regulatory agencies, including the FERC, NRC, SEC, IRS, EPA, CFTC and PHMSA. In addition, the Company and Consolidated SCE&G are subject to regulation by the state governments of South Carolina, North Carolina and Georgia via regulatory agencies, state environmental commissions, and state employment commissions. Accordingly, the Company and Consolidated SCE&G must comply with extensive federal, state and local laws and regulations. Such governmental oversight and regulation broadly and materially affect the operation of our business. In addition to many other aspects of our business, these requirements impact the licensing, siting, construction and operation of facilities. They affect our management of safety, the reliability of our electric and natural gas systems, the physical and cyber security of key assets, customer conservation through DSM Programs, information security, the issuance of securities and borrowing of money, financial reporting, interactions among affiliates, the payment of dividends and employment programs and practices. Changes to governmental regulations are continual and potentially costly to effect compliance. Non-compliance with these requirements by third parties, such as our contractors, vendors and agents, may subject the Company and Consolidated SCE&G to operational risks and to liability. We cannot predict the future course of changes in this regulatory environment or the ultimate effect that this changing regulatory environment will have on the Company’s or Consolidated SCE&G’s businesses. Non-compliance with these laws and regulations could result in fines, litigation, loss of licenses or permits, mandated capital expenditures and other adverse business outcomes, as well as reputational damage, which could adversely affect the cash flows, results of operations, and financial position of the Company and Consolidated SCE&G.

Furthermore, changes in or uncertainty in monetary, fiscal, or regulatory policies of the Federal government may adversely affect the debt and equity markets and the economic climate for the nation, region or particular industries, such as ours or those of our customers. The Company and Consolidated SCE&G could be adversely impacted by changes in tax policy, such as the loss of production tax credits related to the construction of the New Units.

The Company and Consolidated SCE&G are subject to extensive rate regulation which could adversely affect operations. Large capital projects, results of DSM Programs and/or increases in operating costs may lead to requests for regulatory relief, such as rate increases, which may be denied, in whole or part, by rate regulators. Rate increases may also result in reductions in customer usage of electricity or gas, legislative action and lawsuits.

SCE&G’s electric operations in South Carolina and the Company’s gas distribution operations in South Carolina and North Carolina are regulated by state utilities commissions. In addition, the construction of the New Units by SCE&G is subject to rate regulation by the SCPSC via the BLRA. SCE&G’s electric transmission system and Consolidated SCE&G’s generating facilities are subject to extensive regulation and oversight from the NRC and SCPSC. Implementing and maintaining compliance with the NERC's mandatory reliability standards, enforced by FERC, for bulk electric systems could result in higher operating costs and capital expenditures. Non-compliance with these standards could subject SCE&G to substantial monetary penalties. Our gas marketing operations in Georgia are subject to state regulatory oversight and, for a portion of its operations, to rate regulation. There can be no assurance that Georgia’s gas delivery regulatory framework will remain unchanged as market conditions evolve.

Although we believe that we have constructive relationships with the regulators, our ability to obtain rate treatment that will allow us to maintain reasonable rates of return is dependent upon regulatory determinations, and there can be no assurance that we will be able to implement rate adjustments when sought.

The Company and Consolidated SCE&G are subject to numerous environmental laws and regulations that require significant capital expenditures, can increase our costs of operations and may impact our business plans or expose us to environmental liabilities.

The Company and Consolidated SCE&G are subject to extensive federal, state and local environmental laws and regulations, including those relating to water quality and air emissions (such as reducing nitrogen oxide, sulfur dioxide, mercury and particulate matter). Some form of regulation is expected at the federal and state levels to impose regulatory requirements specifically directed at reducing GHG emissions from fossil fuel-fired electric generating units. In January 2014, the EPA proposed NSPS for emissions of carbon dioxide from newly constructed fossil fuel-fired electric generating units. A proposed rule for emissions of carbon dioxide from existing units was issued on June 2, 2014, to be made final no later than June 1, 2015. Also, a number of bills have been introduced in Congress that seek to require GHG emissions reductions from fossil fuel-fired electric generation facilities, natural gas facilities and other sectors of the economy, although none have yet been enacted. In April 2012 the EPA issued the finalized MATS for power plants that requires reduced emissions from new and existing coal and oil-fired electric utility steam generating facilities. In October 2014, the stay on CSAPR was lifted and CAIR was set aside, thus reinstating CSAPR sulfur dioxide and nitrogen oxide allocatons on electric generating units in 28 states, including South Carolina. In 2010, the EPA set a new NAAQS limit for sulfur dioxide and in May 2014 proposed a rule for electric generating unit compliance with that limit. In November 2014, a new NAAQS limit for ozone was proposed by the EPA. The EPA's rule for cooling water intake structures to meet the best technology available became effective in October 2014, and the EPA also issued a final rule in December 2014 regarding the handling of coal ash and other combustion by-products produced by power plant operations. Furthermore, the EPA has proposed new standards under the CWA governing effluent limitation guidelines for electric generating units.

Compliance with these environmental laws and regulations requires us to commit significant capital toward environmental monitoring, installation of pollution control equipment, emissions fees and permitting at our facilities. These expenditures have been significant in the past and are expected to continue or even increase in the future. Changes in compliance requirements or more restrictive interpretations by governmental authorities of existing requirements may impose additional costs on us (such as the clean-up of MGP sites or additional emission allowances) or require us to incur additional capital expenditures or curtail some of our cost savings activities (such as the recycling of fly ash and other coal combustion products for beneficial use). Compliance with any GHG emission reduction requirements, including any mandated renewable portfolio standards, also may impose significant costs on us, and the resulting price increases to our customers may lower customer consumption. Such costs of compliance with environmental regulations could negatively impact our industry, our business and our results of operations and financial position, especially if emissions or discharge limits are reduced or more onerous permitting requirements or additional regulatory requirements are imposed.

Renewable and/or alternative electric generation portfolio standards may be enacted at the federal or state level. Some states already have them, though currently South Carolina does not. Such standards could direct us to build or otherwise acquire generating capacity derived from renewable/alternative energy sources (generally, renewable energy such as biomass, solar, wind and tidal, and excluding fossil fuels, nuclear or hydro facilities). Such renewable/alternative energy may not be readily available in our service territories, if at all, and could be extremely costly to build, acquire, and operate. Resulting increases in the price of electricity to recover the cost of these types of generation, if approved by regulatory commissions, could result in lower usage of electricity by our customers. Although we cannot predict whether such standards will be adopted at the federal level or in South Carolina or their specifics if adopted, compliance with such potential portfolio standards could significantly impact our industry, our capital expenditures, and our results of operations and financial position.

The compliance costs of these environmental laws and regulations are important considerations in the Company's and Consolidated SCE&G's strategic planning and, as a result, significantly affect the decisions to construct, operate, and retire facilities, including generating facilities. In effecting compliance with MATS, SCE&G announced in 2012 that six of its oldest and smallest coal-fired units would be taken off-line or temporarily switched from coal to natural gas prior to closure. Three of these units were retired by the end of 2013 and one has been converted from coal to natural gas.

The Company and Consolidated SCE&G are vulnerable to interest rate increases, which would increase our borrowing costs, and we may not have access to capital at favorable rates, if at all. Additionally, potential disruptions in the capital and credit markets may further adversely affect the availability and cost of short-term funds for liquidity requirements and our ability to meet long-term commitments; each could in turn adversely affect our results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G rely on the capital markets, particularly for publicly offered debt and equity, as well as the banking and commercial paper markets, to meet our financial commitments and short-term liquidity needs if internal funds are not available from operations. Changes in interest rates affect the cost of borrowing. The Company’s and Consolidated SCE&G’s business plans, which include significant investments in energy generation and other internal infrastructure projects, reflect the expectation that we will have access to the capital markets on satisfactory terms to fund commitments. Moreover, the ability to maintain short-term liquidity by utilizing commercial paper programs is dependent upon maintaining satisfactory short-term debt ratings and the existence of a market for our commercial paper generally.

The Company’s and Consolidated SCE&G’s ability to draw on our respective bank revolving credit facilities is dependent on the ability of the banks that are parties to the facilities to meet their funding commitments and on our ability to timely renew such facilities. Those banks may not be able to meet their funding commitments to the Company or Consolidated

SCE&G if they experience shortages of capital and liquidity or if they experience excessive volumes of borrowing requests from us and other borrowers within a short period of time. Longer-term disruptions in the capital and credit markets as a result of uncertainty, changing or increased regulation, reduced alternatives or failures of significant financial institutions could adversely affect our access to liquidity needed for our business. Any disruption could require the Company and Consolidated SCE&G to take measures to conserve cash until the markets stabilize or until alternative credit arrangements or other funding for our business needs can be arranged. Such measures could include deferring capital expenditures or other discretionary uses of cash. Disruptions in capital and credit markets also could result in higher interest rates on debt securities, limited or no access to the commercial paper market, increased costs associated with commercial paper borrowing or limitations on the maturities of commercial paper that can be sold (if at all), increased costs under bank credit facilities and reduced availability thereof, and increased costs for certain variable interest rate debt securities of the Company and Consolidated SCE&G.

Disruptions in the capital markets and its actual or perceived effects on particular businesses and the greater economy also adversely affect the value of the investments held within SCANA's pension trust. A significant long-term decline in the value of these investments may require us to make or increase contributions to the trust to meet future funding requirements. In addition, a significant decline in the market value of the investments may adversely impact the Company's and Consolidated SCE&G's results of operations, cash flows and financial position, including its shareholders' equity.

A downgrade in the credit rating of SCANA or any of SCANA's subsidiaries, including SCE&G, could negatively affect our ability to access capital and to operate our businesses, thereby adversely affecting results of operations, cash flows and financial condition.

Various rating agencies rate SCANA's long-term senior unsecured debt, SCE&G's long-term senior secured debt, and the long-term senior unsecured debt of PSNC Energy as investment grade. In addition, ratings agencies maintain ratings on the short-term debt of SCANA, SCE&G, Fuel Company (which ratings are based upon the guarantee of SCE&G) and PSNC Energy. If these rating agencies were to downgrade any of these ratings, particularly to below investment grade, borrowing cost on new issuances would increase, which would diminish financial results, and the potential pool of investors and funding sources could decrease.

SCANA's leverage ratio of long- and short-term debt to capital was approximately 57% at December 31, 2014. SCANA has publicly announced its desire to maintain its leverage ratio between 54% and 57%, but SCANA's ability to do so depends on a number of factors. In the future, if SCANA is not able to maintain its leverage ratio within the desired range, the Company's debt ratings may be affected, it may be required to pay higher interest rates on its long- and short-term indebtedness, and its ability to access the capital markets may be impaired.

Operating results may be adversely affected by natural disasters, man-made mishaps and abnormal weather.

The Company has delivered less gas and received lower prices for natural gas in deregulated markets when weather conditions have been milder than normal, and as a consequence earned less income from those operations. During 2010, the SCPSC approved SCE&G's implementation of an eWNA on a pilot basis; it was discontinued at the end of 2013. Mild weather in the future could diminish the revenues and results of operations and harm the financial condition of the Company and Consolidated SCE&G. Hot or cold weather could result in higher bills for customers and result in higher write-offs of receivables and in a greater number of disconnections for non-payment. In addition, for the Company and Consolidated SCE&G, severe weather can be destructive, causing outages and property damage, adversely affecting operating expenses and revenues.

Natural disasters (such as electromagnetic events and the 2011 earthquake and tsunami in Japan) or man-made mishaps (such as the San Bruno, California natural gas transmission pipeline failure, the Kingston, Tennessee coal ash pond failure, and cyber-security failures experienced by many businesses) could have direct significant impacts on the Company and Consolidated SCE&G and on our key contractors and suppliers or could impact us through changes to federal, state or local policies, laws and regulations, and have a significant impact on our financial position, operating expenses, and cash flows.

Potential competitive changes may adversely affect our gas and electricity businesses due to the loss of customers, reductions in revenues, or write-down of stranded assets.

The utility industry has been undergoing structural change for a number of years, resulting in increasing competitive pressures on electric and natural gas utility companies. Competition in wholesale power sales via a RTO/ISO (Regional Transmission Organization/Independent System Operator) is in effect across much of the country, but the Southeastern utilities have retained the traditional bundled, vertically integrated structure. Should a RTO/ISO-market be implemented in the

Southeast, potential risks emerge from reliance on volatile wholesale market prices as well as increased costs associated with new delivery transmission and distribution infrastructure.

Some states have also mandated or encouraged unbundled retail competition. Should this occur in South Carolina, increased competition may create greater risks to the stability of utility earnings generally and may in the future reduce earnings from retail electric and natural gas sales. In a deregulated environment, formerly regulated utility companies that are not responsive to a competitive energy marketplace may suffer erosion in market share, revenues and profits as competitors gain access to their customers. In addition, the Company's and Consolidated SCE&G's generation assets would be exposed to considerable financial risk in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, a write-down in the value of the related assets would be required.

The Company and Consolidated SCE&G are subject to the risk of loss of sales due to the growth of distributed generation especially in the form of renewable power such as solar photovoltaic systems, which systems have undergone a rapid decline in their costs. As a result of federal and state subsidies, potential regulations allowing third-party retail sales, and advances in distributed generation technology, the growth of such distributed generation could be significant in the future. Such growth will lessen Company and Consolidated SCE&G sales and slow growth, potentially causing higher rates to customers.

The Company and SCE&G are subject to risks associated with changes in business and economic climate which could adversely affect revenues, results of operations, cash flows and financial condition and could limit access to capital.

Sales, sales growth and customer usage patterns are dependent upon the economic climate in the service territories of the Company and SCE&G, which may be affected by regional, national or even international economic factors. Some economic sectors important to our customer base may be particularly affected. Adverse events, economic or otherwise, may also affect the operations of suppliers and key customers. Such events may result in the loss of suppliers or customers, in costs charged by suppliers, in changes to customer usage patterns and in the failure of customers to make timely payments to us. With respect to the Company, such events also could adversely impact the results of operations through the recording of a goodwill or other asset impairment. The success of local and state governments in attracting new industry to our service territories is important to our sales and growth in sales, as are stable levels of taxation (including property, income or other taxes) which may be affected by local, state, or federal budget deficits, adverse economic climates generally or legislative or regulatory actions. Budget cutbacks also adversely affect funding levels of federal and state support agencies and non-profit organizations that assist low income customers with bill payments.

In addition, conservation and demand side management efforts and/or technological advances may cause or enable customers to significantly reduce their usage of the Company's and SCE&G's products and adversely affect sales, sales growth, and customer usage patterns. For instance, improvements in battery technology, if realized, could have dramatic impacts on the viability of and growth in distributed generation.

Factors that generally could affect our ability to access capital include economic conditions and our capital structure. Much of our business is capital intensive, and achievement of our capital plan and long-term growth targets is dependent, at least in part, upon our ability to access capital at rates and on terms we determine to be attractive. If our ability to access capital becomes significantly constrained, our interest costs will likely increase and our financial condition and future results of operations could be significantly harmed.

Problems with operations could cause us to curtail or limit our ability to serve customers or cause us to incur substantial costs, thereby adversely impacting revenues, results of operations, cash flows and financial condition.

Critical processes or systems in the Company's or Consolidated SCE&G's operations could become impaired or fail from a variety of causes, such as equipment breakdown, transmission equipment failure, information systems failure or security breach, the effects of drought (including reduced water levels) on the operation of emission control or other generation equipment, and the effects of a pandemic or terrorist attack on our workforce or facilities or on the ability of vendors and suppliers to maintain services key to our operations.

In particular, as the operator of power generation facilities, many of which entered service prior to 1985 and may be difficult to maintain, Consolidated SCE&G could incur problems, such as the breakdown or failure of power generation or emission control equipment, transmission equipment, or other equipment or processes which would result in performance below assumed levels of output or efficiency. The operation of the New Units may entail additional cycling of our coal-fired generation facilities and may thereby increase the number of unplanned outages at those facilities. In addition, any such breakdown or failure may result in Consolidated SCE&G purchasing emission allowances or replacement power at market rates, if such allowances and replacement power are available at all. These purchases are subject to state regulatory prudency reviews for recovery through rates. If replacement power is not available, such problems could result in interruptions of service (blackout or brownout conditions) in all or part of SCE&G's territory or elsewhere in the region. Similarly, a natural gas line failure of the Company or Consolidated SCE&G could affect the safety of the public, destroy property, and interrupt our ability to serve customers.

Events such as these could entail substantial repair costs, litigation, fines and penalties, and damage to reputation, each of which could have an adverse effect on the Company's revenues, results of operations, and financial condition. Insurance may not be available or adequate to respond to these events.

A failure of the Company to maintain the physical and cyber security of its operations may result in the failure of operations, damage to equipment, or loss of information, and could result in a significant adverse impact to the Company's financial position, results of operations and cash flows.

The Company depends on maintaining the physical and cyber security of its operations and assets. As much of our business is part of the nation's critical infrastructure, the loss or impairment of the assets associated with that portion of our business could have serious adverse impacts on the customers and communities that we serve. Virtually all of the Company's operations are dependent in some manner upon our cyber systems, which encompass electric and gas operations, nuclear and fossil fuel generating plants, human resource and customer systems and databases, information system networks, and systems containing confidential corporate information. Cyber systems, such as those of the Company, are often targets of malicious cyber attacks. A successful physical or cyber attack could lead to outages, failure of operations of all or portions of our businesses, damage to key components and equipment, and exposure of confidential customer, employee, or corporate information. The Company may not be readily able to recover from such events. In addition, the failure to secure our operations from such physical and cyber events may cause us reputational damage. Litigation, penalties and claims from a number of parties, including customers, regulators and shareholders, may ensue. Insurance may not be adequate to respond to these events. As a result, the Company's financial position, results of operations, and cash flows may be adversely affected.

SCANA's ability to pay dividends and to make payments on SCANA's debt securities may be limited by covenants in certain financial instruments and by the financial results and condition of its subsidiaries, thereby adversely impacting the valuation of our common stock and our access to capital .

We are a holding company that conducts substantially all of our operations through our subsidiaries. Our assets consist primarily of investments in subsidiaries. Therefore, our ability to meet our obligations for payment of interest and principal on outstanding debt and to pay dividends to shareholders and corporate expenses depends on the earnings, cash flows, financial condition and capital requirements of our subsidiaries, and the ability of our subsidiaries, principally Consolidated SCE&G, PSNC Energy and SEMI, to pay dividends or to repay funds to us. Our ability to pay dividends on our common stock may also be limited by existing or future covenants limiting the right of our subsidiaries to pay dividends on their common stock. Any significant reduction in our payment of dividends in the future may result in a decline in the value of our common stock. Such a decline in value could limit our ability to raise debt and equity capital.

A significant portion of Consolidated SCE&G's generating capacity is derived from nuclear power, the use of which exposes us to regulatory, environmental and business risks. These risks could increase our costs or otherwise constrain our business, thereby adversely impacting our results of operations, cash flows and financial condition. These risks will increase as the New Units are developed.

In 2014, Summer Station Unit 1, operated by SCE&G, provided approximately 4.6 million MWh, or 19% of our generation. When the New Units are completed, our generating capacity and the percentage of total generating capacity represented by nuclear sources are expected to increase. Hence, SCE&G is subject to various risks of nuclear generation, which include the following:

- The potential harmful effects on the environment and human health resulting from a release of radioactive materials in connection with the operation of nuclear facilities and the storage, handling and disposal of radioactive materials;
- Limitations on the amounts and types of insurance commercially available to cover losses that might arise in connection with our nuclear operations or those of others in the United States;

- The possibility that new laws and regulations could be enacted that could adversely affect the liability structure that currently exists in the United States;
- Uncertainties with respect to procurement of nuclear fuel and the storage of spent nuclear fuel;
- Uncertainties with respect to contingencies if insurance coverage is inadequate; and
- Uncertainties with respect to the technological and financial aspects of decommissioning nuclear plants at the end of their operating lives.

The NRC has broad authority under federal law to impose licensing and safety-related requirements for the operation of nuclear generation facilities. In the event of non-compliance, the NRC has the authority to impose fines or shut down a unit, or both, depending upon its assessment of the severity of the situation, until compliance is achieved. Revised safety requirements promulgated by the NRC could necessitate capital expenditures at nuclear plants such as ours. In addition, although we have no reason to anticipate a serious nuclear incident, if a major incident should occur at a domestic nuclear facility, it could harm our results of operations, cash flows and financial condition. A major incident at a nuclear facility anywhere in the world could cause the NRC to limit or prohibit the operation or licensing of any domestic nuclear unit. Finally, in today’s environment, there is a heightened risk of terrorist attack on the nation’s nuclear facilities, which has resulted in increased security costs at our nuclear plant.

Failure to retain and attract key personnel could adversely affect the Company’s and Consolidated SCE&G’s operations and financial performance.

As with many other utilities, a significant portion of our workforce will be eligible for retirement during the next few years. We must attract, retain and develop executive officers and other professional, technical and craft employees with the skills and experience necessary to successfully manage, operate and grow our business. Competition for these employees is high, and in some cases we must compete for these employees on a regional or national basis. We may be unable to attract and retain these personnel. Further, the Company’s or Consolidated SCE&G’s ability to construct or maintain generation or other assets requires the availability of suitable skilled contractor personnel. We may be unable to obtain appropriate contractor personnel at the times and places needed. Labor disputes with employees or contractors covered by collective bargaining agreements also could adversely affect implementation of our strategic plan and our operational and financial performance. Furthermore, increased medical benefit costs of employees and retirees could adversely affect the results of operations of the Company and Consolidated SCE&G. Medical costs in this country have risen significantly over the past number of years and are expected to continue to increase at unpredictable rates. Such increases, unless satisfactorily managed by the Company and Consolidated SCE&G, could adversely affect results of operations.

The Company and Consolidated SCE&G are subject to the risk that strategic decisions made by us either do not result in a return of or on invested capital or might negatively impact our competitive position, which can adversely impact our results of operations, cash flows, financial position, and access to capital.

From time to time, the Company and Consolidated SCE&G make strategic decisions that may impact our direction with regard to business opportunities, the services and technologies offered to customers or that are used to serve customers, and the generating plants and other infrastructure that form the basis of much of our business. These strategic decisions may not result in a return of or on our invested capital, and the effects of these strategic decisions may have long-term implications that are not likely to be known to us in the short-term. Changing political climates and public attitudes may adversely affect the ongoing acceptability of strategic decisions that have been made (and, in some cases, previously approved by regulators), to the detriment of the Company or Consolidated SCE&G. Over time, these strategic decisions or changing attitudes toward such decisions, which could be adverse to the Company’s or Consolidated SCE&G’s interests, may have a negative effect on our results of operations, cash flows and financial position, as well as limit our ability to access capital.

The Company and Consolidated SCE&G are subject to the reputational risks that may result from a failure to adhere to high standards of compliance with laws and regulations, ethical conduct, operational effectiveness, customer service and the safety of employees, customers and the public. These risks could adversely affect the valuation of our common stock and the Company’s and Consolidated SCE&G’s access to capital.

The Company and Consolidated SCE&G are committed to comply with all laws and regulations, to focus on the safety of employees, customers and the public, to maintain the privacy of information related to our customers and employees and to maintain effective communications with the public and key stakeholder groups, particularly during emergencies and times of crisis. Social media can very rapidly convey information, whether factual or not, to large numbers of people, including customers and news media, and the failure to timely and effectively manage this media could adversely impact our reputation. The Company and Consolidated SCE&G also are committed to operational excellence, to quality customer service, and, through our Code of Conduct and Ethics, to maintain high standards of ethical conduct in our business operations. A failure to meet these commitments may subject the Company and Consolidated SCE&G not only to fraud, regulatory action, litigation and financial loss, but also to reputational risk that could adversely affect the valuation of SCANA's stock, adversely affect the Company's and Consolidated SCE&G's access to capital, and result in further regulatory oversight. Insurance may not be available or adequate to respond to these events.

ITEM 1B. UNRESOLVED STAFF COMMENTS

Not Applicable

ITEM 2. PROPERTIES

SCANA owns no significant property other than the capital stock of each of its subsidiaries. It holds, directly or indirectly, all of the capital stock of each of its subsidiaries. See also Note 13 to the consolidated financial statements of the Company.

SCE&G's bond indenture, securing the First Mortgage Bonds issued thereunder, constitutes a direct mortgage lien on substantially all of its electric utility property. GENCO's Williams Station is also subject to a first mortgage lien which secures certain outstanding debt of GENCO.

NATURAL GAS DISTRIBUTION AND TRANSMISSION PROPERTIES

SCE&G's natural gas system includes 447 miles of transmission pipeline of up to 20 inches in diameter that connect its distribution system with Southern Natural, Transco and CGT. SCE&G's distribution system consists of 16,732 miles of distribution mains and related service facilities. SCE&G also owns two LNG plants, one located near Charleston, South Carolina, and the other in Salley, South Carolina. The Charleston facility can liquefy up to 6,180 MMBTU per day and store the liquefied equivalent of 1,009,400 MMBTU of natural gas. The Salley facility can store the liquefied equivalent of 927,000 MMBTU of natural gas and has no liquefying capabilities. The LNG facilities have the capacity to regasify approximately 61,800 MMBTU per day at Charleston and 92,700 MMBTU per day at Salley.

As of December 31, 2014, CGT's natural gas system consisted of over 1,400 miles of transmission pipeline of up to 24 inches in diameter. CGT's system transports gas to its customers from the transmission systems of Southern Natural at Port Wentworth, Georgia and Aiken County, South Carolina, Southern LNG, Inc. at Elba Island, near Savannah, Georgia and Transco in Cherokee and Spartanburg counties in South Carolina. In December 2014, SCANA announced that CGT would be sold. The sale closed at the end of January 2015.

PSNC Energy's natural gas system consists of 597 miles of transmission pipeline of up to 24 inches in diameter that connect its distribution systems with Transco. PSNC Energy's distribution system consists of 20,799 miles of distribution mains and related service facilities. PSNC Energy owns one LNG plant with storage capacity of 1,000,000 MMBTU, the capacity to liquefy up to 4,000 MMBTU per day and the capacity to regasify approximately 100,000 MMBTU per day. PSNC Energy also owns, through a wholly-owned subsidiary, 33.21% of Cardinal Pipeline Company, LLC, which owns a 105-mile transmission pipeline in North Carolina. In addition, PSNC Energy owns, through a wholly-owned subsidiary, 17% of Pine Needle LNG Company, LLC. Pine Needle owns and operates a liquefaction, storage and regasification facility in North Carolina.

ELECTRIC PROPERTIES

The following table shows the electric generating facilities and their net generating capacity as of December 31, 2014.

	In-Service Date	Net Generating Capacity Summer (MW)	
Coal-Fired Steam:			
McMeekin - Irmo, SC	1958	250	*
Wateree - Eastover, SC	1970	684	
Williams - Goose Creek, SC	1973	605	
Cope - Cope, SC	1996	415	
Kapstone - Charleston, SC	1999	85	
Gas-Fired Steam - Urquhart Unit 3 - Beech Island, SC	1953	95	*
Nuclear:			
Summer Station Unit 1 - Parr, SC (reflects SCE&G's 66.7% ownership share)	1984	647	
Summer Station Unit 2 and Unit 3 - Parr, SC			**
Internal Combustion Turbines:			
Peaking units - various locations in SC	1968-2010	352	
Urquhart Combined Cycle - Beech Island, SC	2002	458	

Jasper Combined Cycle - Jasper, SC	2004	852
Hydro:		
Saluda - Irmo, SC	1930	200
Other hydro units - various locations in or bordering SC	1905-1914	18
Fairfield Pumped Storage - Parr, SC	1978	576

* As described in Note 2 to the consolidated financial statements for SCANA and SCE&G, SCE&G intends to retire these units by 2020, subject to future developments in environmental regulations, among other matters. Urquhart Unit 3 was fueled with coal prior to 2013 and is expected to be fueled with natural gas until its retirement.

** SCE&G owns 55% of Unit 2 and Unit 3, which are being constructed at Summer Station.

SCE&G owns 434 substations having an aggregate transformer capacity of 29.8 million KVA. The transmission system consists of 3,411 miles of lines, and the distribution system consists of 18,442 pole miles of overhead lines and 7,122 trench miles of underground lines.

ITEM 3. LEGAL PROCEEDINGS

SCANA and SCE&G are subject to various claims and litigation incidental to their business operations which management anticipates will be resolved without a material impact on their respective results of operations, cash flows or financial condition. In addition, certain material regulatory and environmental matters and uncertainties, some of which remain outstanding at December 31, 2014, are described in the Rate Matters section of Note 2 and in the Environmental section of Note 10 to the consolidated financial statements of SCANA and SCE&G.

ITEM 4. MINE SAFETY DISCLOSURES

EXECUTIVE OFFICERS OF SCANA CORPORATION

Executive officers are elected at the annual meeting of the Board of Directors, held immediately after the annual meeting of shareholders, and hold office until the next such annual meeting, unless (1) a resignation is submitted, (2) the Board of Directors shall otherwise determine or (3) as provided in the By-laws of SCANA. Positions held are for SCANA and all subsidiaries unless otherwise indicated.

Name	Age	Positions Held During Past Five Years	Dates
Kevin B. Marsh	59	Chairman of the Board and Chief Executive Officer	2011-present
		President and Chief Operating Officer-SCANA	2011-present
		President and Chief Operating Officer-SCE&G	*-2011
Jimmy E. Addison	54	Executive Vice President-SCANA	
		Chief Financial Officer	2012-present
		President and Chief Operating Officer-SEMI	*-present
		Senior Vice President	2014-present
			*-2012
Jeffrey B. Archie	57	Senior Vice President and Chief Nuclear Officer-SCE&G	*-present
		Senior Vice President-SCANA	*-present
George J. Bullwinkel	66	President and Chief Operating Officer-SCI	
		President and Chief Operating Officer-SEMI and ServiceCare	*-2015
		Senior Vice President-SCANA	*-2014
			*-2015
Sarena D. Burch	57	Senior Vice President-Fuel Procurement and Asset Management-SCE&G	
		and PSNC Energy	*-present
		Senior Vice President-SCANA	*-present
Stephen A. Byrne	55	President-Generation and Transmission and Chief Operating Officer-SCE&G	2011-present
		Executive Vice President-SCANA	*-present
		Executive Vice President-Generation and Transmission-SCE&G	2011
		Executive Vice President-Generation, Nuclear and Fossil Hydro-SCE&G	*-2011
Paul V. Fant	61	President and Chief Operating Officer-CGT	*-2015
		Senior Vice President-SCANA	*-2015
D. Russell Harris	50	Senior Vice President-Gas Distribution-SCANA	2013-present
		President-Gas Operations-SCE&G	2013-present
		President and Chief Operating Officer-PSNC Energy	*-present
		Senior Vice President-SCANA	2012-2013
Kenneth R. Jackson	58		
		Senior Vice President-Economic Development, Governmental and Regulatory Affairs	2014-present
		Senior Vice President-SCANA	2014-present
		Vice President-Rates and Regulatory Services	*-2014
W. Keller Kissam	48	President of Retail Operations-SCE&G	2011-present
		Senior Vice President-SCANA	2011-present
		Senior Vice President-Retail Operations-SCE&G	2011
		Vice President-Electric Operations-SCE&G	*-2011
Ronald T. Lindsay	64	Senior Vice President, General Counsel and Assistant Secretary	*-present
Martin K. Phalen	60	Senior Vice President-Administration-SCANA	2012-present
		Vice President-Gas Operations-SCE&G	*-2012

*Indicates positions held as least since March 1, 2010.

George J. Bullwinkel and Paul V. Fant ceased being executive officers of SCANA Corporation by February 1, 2015.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES

COMMON STOCK INFORMATION

SCANA Corporation:

Price Range (NYSE Composite Listing):

	2014				2013			
	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.
High	$ 63.41	$ 53.89	$ 53.88	$ 51.39	$ 48.15	$ 52.93	$ 54.41	$ 51.23
Low	$ 47.77	$ 48.53	$ 49.51	$ 45.58	$ 44.75	$ 45.72	$ 47.22	$ 45.57

SCANA common stock trades on the NYSE using the ticker symbol SCG. Newspaper stock listings use the name SCANA. At February 20, 2015 there were 142,916,917 shares of SCANA common stock outstanding which were held by approximately 27,147 shareholders of record. For a summary of equity securities issuable under SCANA's compensation plans at December 31, 2014, see Item 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS.

SCANA declared quarterly dividends on its common stock of $0.525 per share in 2014 and $0.5075 per share in 2013. On February 19, 2015, SCANA increased the quarterly cash dividend rate on SCANA common stock to $0.545 per share, an increase of approximately 3.8%. The next quarterly dividend is payable April 1, 2015 to shareholders of record on March 10, 2015. For a discussion of provisions that could limit the payment of cash dividends, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCANA.

SCE&G:

All of SCE&G's common stock is owned by SCANA, and no established public trading market exists for SCE&G common stock. During 2014 and 2013, SCE&G declared quarterly dividends on its common stock in the following amounts:

Declaration Date	Amount	Declaration Date	Amount
February 20, 2013	$ 62.2 million	February 20, 2014	$ 62.5 million
April 25, 2013	62.0 million	April 24, 2014	62.8 million
July 31, 2013	65.8 million	July 31, 2014	66.8 million
October 31, 2013	60.0 million	October 30, 2014	72.5 million

On February 19, 2015, SCE&G declared a quarterly dividend on its common stock of $69.0 million.

For a discussion of provisions that could limit the payment of cash dividends, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS under Liquidity and Capital Resources-Financing Limits and Related Matters and Note 3 to the consolidated financial statements for SCE&G.

ITEM 6. SELECTED FINANCIAL DATA

As of or for the Year Ended December 31,	2014	2013	2012	2011	2010
	(Millions of dollars, except statistics and per share amounts)				
SCANA:					
Statement of Income Data

SCANA CORPORATION

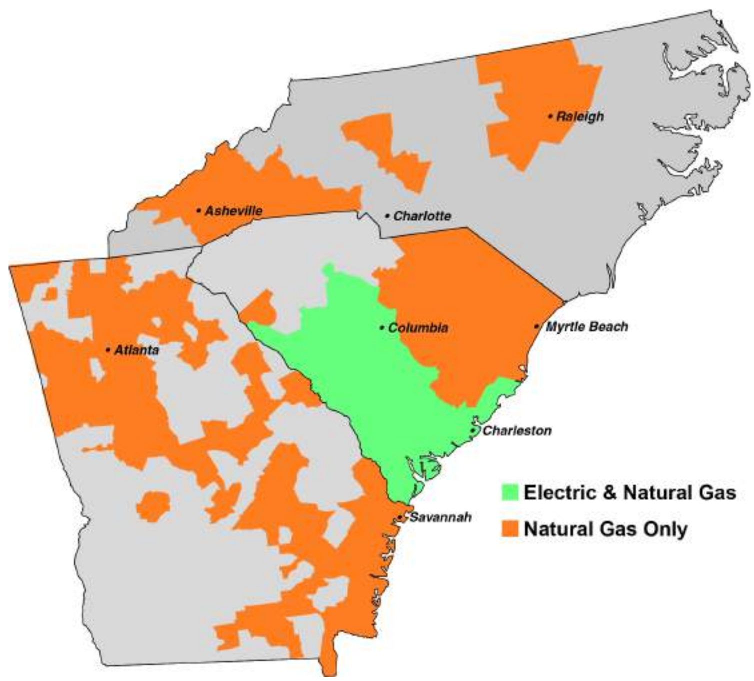
ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCANA, through its wholly-owned regulated subsidiaries, is primarily engaged in the generation, transmission, distribution and sale of electricity in South Carolina and in the purchase, transmission and sale of natural gas in North Carolina and South Carolina. Through other wholly-owned nonregulated subsidiaries, SCANA markets natural gas to retail customers in Georgia and to wholesale customers primarily in the southeast, and also provides fiber optic and other telecommunications services. A service company subsidiary of SCANA provides primarily administrative and management services to SCANA and its subsidiaries.

In December 2014 SCANA entered into agreements to sell its interstate natural gas pipeline and telecommunications subsidiaries. These sales closed in the first quarter of 2015. See Note 13 to the consolidated financial statements.

The following map indicates areas where the Company's significant business segments conduct their activities, as further described in this overview section.



The following percentages reflect net income earned by the Company's regulated and nonregulated businesses (including the holding company) and the percentage of total assets held by them.

	2014	2013	2012
Net Income			
Regulated	98%	97%	99%
Nonregulated	2%	3%	1%
Assets			
Regulated	95%	95%	95%
Nonregulated	5%	5%	5%

Key Earnings Drivers and Outlook

During 2014, economic growth continued to improve in the southeast. Significant industrial announcements were made in the Company's South Carolina and North Carolina service territories during the year, and announcements made in previous years began to materialize. In addition, the Port of Charleston continues to see increased traffic, with container volume up 12% over 2013. The Company also experienced positive residential and commercial customer growth rates in its regulated businesses and steady unemployment rates for areas served by the Company.

Over the next five years, key earnings drivers for the Company will be additions to rate base at its regulated subsidiaries, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage in each of the regulated utility businesses, earnings in the natural gas marketing business in Georgia and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

SCE&G's electric operations primarily generates electricity and provides for its transmission, distribution and sale to approximately 688,000 customers (as of December 31, 2014) in portions of South Carolina in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control growth in costs. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electric prices and, therefore, the competitive position of electricity against other energy sources.

Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2014 was 10.25% for non-BLRA rate base, and 11.0% for BLRA-related rate base. To prevent the need for a non-BLRA base rate increase during years of peak nuclear construction, SCE&G has a stated goal of earning a return on equity of 9% or higher. For the year ended December 31, 2014, SCE&G's earned return on equity related to non-BLRA rate base was approximately 10%.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of two 1,250 MW (1,117 MW, net) nuclear generation units, which SCE&G will jointly own with Santee Cooper. SCE&G's current ownership share in the New Units is 55%, and under an agreement signed in January 2014, SCE&G has agreed to acquire an additional 5% ownership in increments coinciding with the commercial operation date of Unit 2 and the first and second anniversaries thereof. The purchase of this additional 5% ownership is expected to be funded by increased cash flows resulting from tax deductibility of depreciation associated with the commercial operation of the New Units.

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. As of December 31, 2014, SCE&G's investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018, with an approved 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in 2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

For additional information on these and other matters, see New Nuclear Construction Matters herein and Note 2 and Note 10 to the consolidated financial statements.

Environmental

EPA regulations have a significant impact on the Company's electric operations. In 2014, several regulations were proposed or became final, including the following:

- A revised carbon standard for new power plants was proposed on January 8, 2014, which requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. This rule effectively prevents construction of new coal-fired plants without carbon capture and sequestration capabilities.
- The Clean Power Plan released on June 2, 2014 would regulate carbon dioxide emissions from existing units. This proposed rule includes state-specific goals for carbon dioxide emissions, as well as guidelines for states to follow in

developing SIPs to achieve those goals. Though it may be revised before becoming final in June 2015, the proposal gives states from one to three years from the date of any final rule to issue SIPs. The SIPs will ultimately define the specific compliance methodology that will be applied to existing units in that state.

- The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved in connection with the renewal (every five years) of state-issued NPDES permits. The ELG Rule is expected to be finalized by September 30, 2015.

- A final rule became effective October 14, 2014 that modifies requirements for existing cooling water intake structures. The Company is conducting studies and is developing or implementing compliance plans for this rule. Congress is also expected to consider further amendments to the CWA, and such legislation may include toxicity-based standards, among other things.

- On November 26, 2014 the EPA announced a proposed tightening of current NAAQS ozone standards from .075 ppm to a range between .065 and .070 ppm, and that it will take comments on a standard as low as .060 ppm. A final rule is expected in October 2015.

- New federal regulations affecting the management and disposal of CCRs were issued on December 19, 2014 and are expected to take effect in 2015. Under these regulations, CCRs will not be regulated as hazardous waste. These regulations do impose certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The above environmental initiatives and similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, the Company cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on the Company, if any. The Company believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The local distribution operations of SCE&G and PSNC Energy purchase, transport and sell natural gas to approximately 859,000 retail customers (as of December 31, 2014) in portions of South Carolina and North Carolina in areas covering 34,600 square miles. Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control growth in costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25% for SCE&G and 10.60% for PSNC Energy.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact the Company’s ability to retain large commercial and industrial customers.

The production of shale gas in the United States continues to keep prices for this commodity at historic lows, and such prices are expected to continue at such levels for the foreseeable future. The supply of natural gas from the Marcellus and Utica shale basins in West Virginia, Pennsylvania and Ohio has prompted companies unaffiliated with SCANA to propose a 550-mile pipeline that would bring natural gas from these basins to Virginia and North Carolina. If successful, the completed pipeline should drive economic development along its path, including areas within PSNC Energy's service territory, and should serve to keep natural gas competitively priced in the region.

Retail Gas Marketing

SCANA Energy, a division of SEMI, sells natural gas to approximately 459,000 customers (as of December 31, 2014) throughout Georgia. SCANA Energy’s total customer base represents approximately 30% of the customers in Georgia’s deregulated natural gas market. This market is mature, resulting in lower margins and stiff competition. Competitors include affiliates of large energy companies as well as electric membership cooperatives, among others. SCANA Energy’s ability to maintain its market share primarily depends on the prices it charges customers relative to the prices charged by its competitors and its ability to provide high levels of customer service. In addition, SCANA Energy's operating results are highly sensitive to weather.

Approximately 66,000 of SCANA Energy's customers (as of December 31, 2014) are low-income or are unable to obtain natural gas service from other marketers. As Georgia’s regulated provider, SCANA Energy provides service to these customers at rates approved by the GPSC and receives funding from Georgia's Universal Service Fund to offset some of the resulting bad debt. SCANA Energy files financial and other information periodically with the GPSC, and such information is available at *www.psc.state.ga.us* (which is not intended as an active hyperlink; the information on the GPSC website is not part of this or any other report filed by the Company with the SEC).

SCANA Energy and certain of SCANA’s other natural gas distribution and marketing segments maintain gas inventory and utilize forward contracts and other financial instruments, including commodity swaps and futures contracts, to manage exposure to fluctuating commodity natural gas prices. See Note 6 to the consolidated financial statements. As a part of this risk management process, at any given time, a portion of SCANA’s projected natural gas needs has been purchased or placed under contract.

Energy Marketing

The divisions of SEMI, excluding SCANA Energy, market natural gas primarily in the southeast and provide energy-related services to customers. Operating results for energy marketing are primarily influenced by customer demand for natural gas and the ability to control growth of costs. The price of alternate fuels and customer growth significantly affect demand for natural gas. In addition, certain pipeline capacity available for Energy Marketing to serve industrial and other customers is dependent upon the market share held by SCANA Energy in the retail market.

RESULTS OF OPERATIONS

	2014	2013	2012
Basic earnings per share	$ 3.79	$ 3.40	$ 3.20
Diluted earnings per share	$ 3.79	$ 3.39	$ 3.15
Cash dividends declared (per share)	$ 2.10	$ 2.03	$ 1.98

2014 vs 2013	Basic earnings per share increased primarily due to the effects of weather, customer growth and base rate increases under the BLRA. Higher electric and gas margins were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes, dilution from additional shares outstanding and higher interest expense, as further described below.
2013 vs 2012	Basic earnings per share increased due to higher electric and gas margins. These margin increases were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes, dilution from additional shares outstanding and higher interest expense, as further described below.

Diluted earnings per share figures give effect to dilutive potential common stock using the treasury stock method. See Note 1 to the consolidated financial statements.

On February 19, 2015, SCANA declared a quarterly cash dividend on its common stock of $.545 per share.

As further discussed in Note 13 to the consolidated financial statements, in December 2014 SCANA announced that it would sell CGT and SCI. These sales closed in January and February 2015, respectively. In aggregate, these subsidiaries contributed basic earnings per share of $.14 in 2014, $.15 in 2013 and $.18 in 2012.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 2,629.4	8.2%	$ 2,430.5	(0.9)%	$ 2,453.1
Less: Fuel used in electric generation	799.3	6.4%	751.0	(11.0)%	844.2
Purchased power	80.7	87.7%	43.0	53.0 %	28.1
Margin	$ 1,749.4	6.9%	$ 1,636.5	3.5 %	$ 1,580.8

2014 vs 2013 Electric margin increased due to the effects of weather of $43.5 million, base rate increases under the BLRA of $54.1 million and customer growth of $14.7 million. These margin increases were partially offset by $69.0 million of downward adjustments to electric revenues in 2014 pursuant to SCPSC orders related to fuel cost recovery and SCE&G's DSM Programs. In 2013, pursuant to SCPSC orders, electric revenues were adjusted downward by $50.1 million related to fuel cost recovery and the reversal of undercollected amounts related to the Company's pilot eWNA program (eWNA was discontinued effective with the first billing cycle of 2014). Such adjustments are fully offset by the recognition within other income of gains realized upon the late 2013 settlement of certain derivative interest rate contracts and the application, as a reduction to operation and maintenance expenses, of a portion of SCE&G's storm damage reserve, both of which had been deferred in regulatory accounts. See Note 2 to the consolidated financial statements.

2013 vs 2012 Margin increased primarily due to base rate increases under the BLRA of $54.2 million and higher electric base rates of $67.3 million approved in the December 2012 rate order. Additionally, pursuant to accounting orders of the SCPSC, 2013's electric margin reflects downward adjustments of $50.1 million to revenue. Such adjustments are fully offset by the recognition within other income of gains realized upon the settlement of certain derivative interest rate contracts, which had been deferred as regulatory liabilities. See Note 2 to the consolidated financial statements.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2014	Change	2013	Change	2012
Residential	8,156	7.7%	7,571	—	7,571
Commercial	7,371	2.3%	7,205	(1.2)%	7,291
Industrial	6,234	3.9%	6,000	2.8 %	5,836
Other	600	3.3%	581	(0.9)%	586
Total retail sales	22,361	4.7%	21,357	0.3 %	21,284
Wholesale	958	0.3%	955	(63.2)%	2,595
Total Sales	23,319	4.5%	22,312	(6.6)%	23,879

2014 vs 2013 Retail sales volumes increased primarily due to the effects of weather and customer growth.

2013 vs 2012 Retail sales volume increased primarily due to customer growth and the effects of weather, partially offset by lower average use. The decrease in wholesale sales is primarily due to the expiration of two customer contracts.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G and PSNC Energy. Gas Distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 1,014.0	7.6%	$ 942.6	23.2%	$ 765.0
Less: Gas purchased for resale	592.5	10.8%	534.9	42.8%	374.6
Margin	$ 421.5	3.4%	$ 407.7	4.4%	$ 390.4

2014 vs 2013 Margin increased primarily due to weather, residential and commercial customer growth of $9.1 million and increased average usage at SCE&G of $2.5 million.

2013 vs 2012 Margin increased primarily due to the SCPSC-approved increase in base rates under the RSA which became effective with the first billing cycle of November 2012, as well as residential and commercial customer growth and increased industrial usage.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2014	Change	2013	Change	2012
Residential	46,207	12.0 %	41,268	24.4%	33,161
Commercial	30,701	8.9 %	28,181	12.7%	25,001
Industrial	20,343	(8.9)%	22,319	4.6%	21,340
Transportation gas	45,506	7.8 %	42,221	9.0%	38,736
Total	142,757	6.5 %	133,989	13.3%	118,238

2014 vs 2013 Total sales volumes increased primarily due to weather and residential and commercial customer growth. Industrial sales volumes decreased primarily due to weather related curtailments and a customer switching to an alternative fuel source. Transportation sales increased due to an increase in natural gas fired generation, partially offset by curtailments.

2013 vs 2012 Total sales volumes increased primarily due to customer growth, increased industrial usage and the effects of weather.

Retail Gas Marketing

Retail Gas Marketing is comprised of SCANA Energy, which operates in Georgia's natural gas market. Retail Gas Marketing operating revenues and net income were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 514.9	10.7%	$ 465.2	12.8%	$ 412.5
Net Income	25.9	8.8%	23.8	*	10.5

* Greater than 100%

2014 vs 2013 Changes in operating revenues and net income are due to higher demand in 2014 primarily as a result of weather.

2013 vs 2012 Changes in operating revenues and net income are due to higher demand in 2013 primarily as a result of milder weather in 2012.

Energy Marketing

Energy Marketing is comprised of the Company's nonregulated marketing operations, excluding SCANA Energy. Energy Marketing operating revenues and net income were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 981.5	19.9 %	$ 818.5	22.3%	$ 669.0
Net Income	5.1	(16.4)%	6.1	13.0%	5.4

2014 vs 2013 Operating revenues increased due to higher industrial sales volume and higher market prices. Net income decreased due to higher cost to serve customers during periods of pipeline constraints.

2013 vs 2012 Operating revenues and net income increased due to higher industrial sales volume and higher market prices.

Other Operating Expenses

Other operating expenses were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Other operation and maintenance	$ 728.3	2.9%	$ 707.5	2.6%	$ 689.3
Depreciation and amortization	383.7	1.5%	378.1	6.2%	356.1
Other taxes	228.8	4.1%	219.7	6.1%	207.1

2014 vs 2013 — Other operation and maintenance expenses increased primarily due to higher electric operating expenses of $8.9 million, DSM Programs cost amortization of $2.1 million, higher labor expense of $3.5 million which includes incentive compensation and lower pension costs, storm expenses of $1.1 million and other general expenses of $1.9 million. Depreciation and amortization expense increased due to net plant additions. Other taxes increased primarily due to higher property taxes.

2013 vs 2012 — Other operation and maintenance expenses increased by $16.7 million due to incremental expenses associated with the December 2012 SCPSC rate order and by $5.7 million due to higher electric generation, transmission and distribution expenses. These increases were partially offset by lower compensation costs of $10.1 million due to reduced headcount and lower incentive compensation accruals and by other general expenses. Depreciation and amortization expense increased $13.2 million due to the recognition of depreciation expense associated with the Wateree Station scrubber which was provided for in the December 2012 SCPSC rate order and due to other net plant additions. Other taxes increased primarily due to higher property taxes on net property additions.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on the Company's income statements and balance sheets as follows:

Millions of dollars	2014	Change	2013	Change	2012
Income Statement Impact:					
Employee benefit costs	$ 5.0	(67.7)%	$ 15.5	*	$ 4.0
Other expense	0.2	(80.0)%	1.0	25.0 %	0.8
Balance Sheet Impact:					
Increase in capital expenditures	0.5	(93.1)%	7.2	9.1 %	6.6
Component of amount receivable from Summer Station co-owner	0.1	(96.0)%	2.5	13.6 %	2.2
Increase (decrease) in regulatory asset	(3.2)	*	5.5	(63.1)%	14.9
Net periodic benefit cost	$ 2.6	(91.8)%	$ 31.7	11.2 %	$ 28.5

* Greater than 100%

In 2013, pursuant to regulatory orders, SCE&G began recovering current pension expense through a rate rider (for retail electric operations) and through cost of service rates (for gas operations), and began amortizing pension costs previously deferred in regulatory assets over approximately 30 years (for retail electric operations) and approximately 14 years (for gas operations). See further discussion in Note 2 and Note 8 to the consolidated financial statements. Amounts amortized were as follow:

Millions of dollars	2014	2013
Retail electric operations	$ 2.0	$ 2.0
Gas operations	1.0	0.2

Other Income (Expense)

Other income (expense) includes the results of certain incidental activities of regulated subsidiaries, the activities of certain non-regulated subsidiaries, and AFC. Components of other income (expense) were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Other income	$ 121.8	21.4%	$ 100.3	71.2%	$ 58.6
Other expense	(64.3)	41.3%	(45.5)	8.1%	(42.1)
Total	$ 57.5	4.9%	$ 54.8	*	$ 16.5

* Greater than 100%

2014 vs 2013 — Other income (expense) increased primarily due to the recognition of $64.0 million of gains realized upon the late 2013 settlement of certain interest rate derivative contracts previously recorded as regulatory liabilities pursuant to SCPSC orders previously discussed, compared to $50.1 million of such gains in 2013. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income.

2013 vs 2012 — Changes in other income were primarily due to the recognition, pursuant to SCPSC accounting orders, of $50.1 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as regulatory liabilities. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income. This increase in other income was partially offset by the sales of communications towers that were recorded in 2012 by a non-regulated subsidiary. Changes in other expense were not significant.

AFC

AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. The Company includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. AFC represented approximately 6.1% of income before income taxes in 2014, 5.8% in 2013 and 5.4% in 2012.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Interest on long-term debt, net	$ 306.7	4.7%	$ 292.8	0.9 %	$ 290.2
Other interest expense	5.7	23.9%	4.6	(11.5)%	5.2
Total	$ 312.4	5.0%	$ 297.4	0.7 %	$ 295.4

Interest on long-term debt increased in each year primarily due to increased long-term borrowings used to finance nuclear construction, among other things. Other interest expense decreased in 2013, primarily due to reductions in principal balances outstanding on short-term debt over the prior year.

Income Taxes

Income tax expense increased in 2014 over 2013 and in 2013 over 2012 primarily due to increases in income before taxes. The Company's effective tax rate has been favorably impacted by equity AFC and certain tax credits.

LIQUIDITY AND CAPITAL RESOURCES

The Company anticipates that its contractual cash obligations will be met through internally generated funds and additional short- and long-term borrowings. The Company expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt.

Cash requirements for SCANA's regulated subsidiaries arise primarily from their operational needs, funding their construction programs and payment of dividends to SCANA. The ability of the regulated subsidiaries to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental regulations, will depend on their ability to attract the necessary financial capital on reasonable terms. Regulated subsidiaries recover the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and these subsidiaries continue their ongoing construction programs, rate increases will be sought. The future financial position and results of operations of regulated subsidiaries will be affected by their ability to obtain adequate and timely rate and other regulatory relief.

The Company obtains equity from SCANA's stock plans. In 2014, shares of SCANA common stock were acquired on behalf of participants in SCANA's Investor Plus Plan and Stock Purchase-Savings Plan through the original issuance of shares, rather than being purchased on the open market. This provided approximately $98 million of additional equity during 2014. Due primarily to the availability of proceeds from the sale of two subsidiaries in the first quarter of 2015, the Company began using open market purchases for its stock plans at the end of January 2015. In addition, on March 5, 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196 million.

SCANA's leverage ratio of long- and short-term debt to capital was approximately 57% at December 31, 2014. SCANA has publicly announced its desire to maintain its leverage ratio between 54% and 57%, but SCANA's ability to do so depends on a number of factors. In the future, if SCANA is not able to maintain its leverage ratio within the desired range, the Company's debt ratings may be affected, it may be required to pay higher interest rates on its long- and short-term indebtedness, and its access to capital markets may be limited.

Capital Expenditures

Cash outlays for property additions and construction expenditures, including nuclear fuel, net of AFC, were $1.1 billion in 2014. The Company's current estimates of its capital expenditures for construction and nuclear fuel for the next three years, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	**2015**	**2016**	**2017**
SCE&G - Normal			
Generation	$ 158	$ 123	$ 143
Transmission & Distribution	272	251	217
Other	37	41	27
Gas	54	64	57
Common	9	12	9
Total SCE&G - Normal	530	491	453
PSNC Energy	98	123	132
Other	38	20	29
Total Normal	666	634	614
New Nuclear (including transmission)	957	928	708
Cash Requirements for Construction	1,623	1,562	1,322
Nuclear Fuel	22	145	104
Total Estimated Capital Expenditures	$ 1,645	$ 1,707	$ 1,426

Estimated capital expenditures for Nuclear Fuel in 2016 include approximately $53 million, which is SCE&G's share of nuclear fuel it acquired in 2013. This fuel has been recorded in utility plant and the corresponding liability has been recorded in long-term debt on the consolidated balance sheet.

The Company's contractual cash obligations as of December 31, 2014 are summarized as follows:

Contractual Cash Obligations	**Payments due by periods**				
Millions of dollars	**Total**	**Less than 1 year**	**1 - 3 years**	**4 - 5 years**	**More than 5 years**
Long- and short-term debt, including interest	$ 12,011	$ 1,403	$ 1,717	$ 871	$ 8,020
Capital leases	17	4	9	3	1
Operating leases	38	8	8	3	19
Purchase obligations	3,627	2,273	1,352	1	1
Other commercial commitments	3,992	881	1,787	666	658
Total	$ 19,685	$ 4,569	$ 4,873	$ 1,544	$ 8,699

As of December 31, 2014, contractual cash obligations related to CGT and SCI are excluded from the above table and were not significant. See Note 13 to the consolidated financial statements for a discussion of the sales of CGT and SCI.

Included in the table above in purchase obligations is SCE&G's portion of a contractual agreement for the design and construction of the New Units at Summer Station. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent of the cost and receiving 55 percent of the output. The estimated $500 million SCE&G expects it will cost to acquire an additional 5% ownership in the New Units is included in other commercial commitments and is further described in New Nuclear Construction Matters.

Purchase obligations include customary purchase orders under which the Company has the option to utilize certain vendors without the obligation to do so. The Company may terminate such arrangements without penalty.

Other commercial commitments includes estimated obligations under forward contracts for natural gas purchases. Such forward contracts include customary "make-whole" or default provisions, but are not considered to be "take-or-pay" contracts. Certain of these contracts relate to regulated businesses; therefore, the effects of such contracts on fuel costs are reflected in electric or gas rates. Other commercial commitments also includes a "take-and-pay" contract for natural gas which expires in 2019 and estimated obligations for coal and nuclear fuel purchases.

In addition to the contractual cash obligations above, the Company sponsors a noncontributory defined benefit pension plan and an unfunded health care and life insurance benefit plan for retirees. The pension plan is adequately funded under current regulations, and no significant contributions are anticipated for the foreseeable future. Cash payments under the postretirement health care and life insurance benefit plan were $9.6 million in 2014, and such annual payments are expected to be the same or increase to as much as $11.5 million in the future.

In addition, the Company is party to certain NYMEX natural gas futures contracts for which any unfavorable market movements are funded in cash. These derivatives are accounted for as cash flow hedges and their effects are reflected within other comprehensive income until the anticipated sales transactions occur. See further discussion at Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK. At December 31, 2014, the Company had posted $21.2 million in cash collateral for such contracts. In addition, the Company had posted $131.2 million in cash collateral related to interest rate derivative contracts.

The Company also has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional asset retirement obligations that are not listed in the contractual cash obligations table. See Notes 1 and 10 to the consolidated financial statements.

Financing Limits and Related Matters

The Company's issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including state public service commissions and FERC. Financing programs currently utilized by the Company follow.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, banks, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

In October 2014, the Company's existing five-year committed LOCs were extended by one year. At December 31, 2014 SCANA, SCE&G (including Fuel Company) and PSNC Energy were parties to five-year credit agreements in the amounts of $300 million, $1.2 billion, of which $500 million relates to Fuel Company, and $100 million, respectively, which expire in October 2019. In addition, at December 31, 2014 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

On January 29, 2015, SCANA entered into an unsecured, three-month credit agreement in the amount of $150 million. SCANA entered this agreement to ensure sufficient liquidity was available to redeem its Junior Subordinated Notes on February 2, 2015. No borrowings were made under this agreement, and it expired according to its terms on February 6, 2015.

As of December 31, 2014, the Company had no outstanding borrowings under its $1.8 billion credit facilities, had approximately $918 million in commercial paper borrowings outstanding, was obligated under $3.3 million in LOC supported letters of credit, and held approximately $137 million in cash and temporary investments. The Company regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2014 were approximately $515 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2014, the Company’s long-term debt portfolio has a weighted average maturity of approximately 19 years and bears an average cost of 5.7%. Substantially all of the Company's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, the Company rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

The Company’s articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture (relating to the hereinafter defined Bonds) and PSNC Energy’s note purchase and debenture purchase agreements each contain provisions that, under certain circumstances which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2014, approximately $67.7 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

SCANA Corporation

SCANA has an indenture which permits the issuance of unsecured debt securities from time to time including its medium-term notes. This indenture contains no specific limit on the amount of unsecured debt securities which may be issued.

South Carolina Electric & Gas Company

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2014, the Bond Ratio was 5.41.

Financing Activities

During 2014, net cash inflows related to financing activities totaled approximately $586 million, primarily associated with the issuance of short- and long-term debt and common stock, partially offset by the repayment of long-term debt and payment of dividends. For a description of specific financing activities, see Notes 3 and 4 to the consolidated financial statements.

On February 2, 2015, SCANA redeemed prior to maturity $150 million of its 7.70% junior subordinated notes at their face value.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G’s construction program, to finance capital expenditures, and for general corporate purposes.

Investing Activities

During 2014, the Company paid approximately $95 million to settle interest rate derivative contracts.

The Company paid approximately $6 million, net, through the third quarter of 2013 to settle interest rate derivative contracts upon the issuance of long-term debt. In addition, during the fourth quarter of 2013, the Company received approximately $120 million upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt.

For additional information, see Note 4 to the consolidated financial statements.

Major tax incentives included within recent federal legislation resulted in the allowance of 50% bonus depreciation for property placed in service for 2012 and 2013. These incentives, along with certain other deductions, have had a positive impact on the cash flows of the Company. Similar tax incentives for property placed in service for 2014 were implemented after the Company had made estimated tax payments for the 2014 tax year. As a result, these excess payments are expected to have a positive impact on the cash flows of the Company in 2015.

Ratios of earnings to fixed charges for each of the five years ended December 31, 2014, were as follows:

December 31,	2014	2013	2012	2011	2010
SCANA	3.39	3.22	2.93	2.87	2.92

ENVIRONMENTAL MATTERS

The Company's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on the Company's financial condition, results of operations and cash flows. In addition, the Company often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, the Company expects to recover such expenditures and costs through existing ratemaking provisions.

For the three years ended December 31, 2014, the Company's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $51.8 million. During this same period, the Company expended approximately $31.5 million for the construction and retirement of landfills and ash ponds, net of disposal proceeds. In addition, the Company made expenditures to operate and maintain environmental control equipment at its fossil plants of $9.1 million in 2014, $9.2 million in 2013 and $10.2 million in 2012, which are included in “Other operation and maintenance” expense, and made expenditures to handle waste ash, net of disposal proceeds, of $1.6 million in 2014, $3.2 million in 2013 and $7.9 million in 2012, which are included in “Fuel used in electric generation.” In addition, included within “Other operation and maintenance” expense is an annual amortization of $1.4 million in each of 2014, 2013 and 2012 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for the Company are $31.9 million for 2015 and $68.6 million for the four-year period 2016-2019. These expenditures are included in the Company's Estimated Capital

Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though the Company cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, SCANA, SCE&G and GENCO are subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. The Company cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact the Company, and the following discussion should not be considered all-inclusive.

Physical effects associated with climate changes could include the impact of possible changes in weather patterns, such as storm frequency and intensity, and the resultant potential damage to the Company's electric system, as well as impacts on employees and customers and on the Company's supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations in advance of such storms, all in order to allow the Company to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Environmental commitments and contingencies are further described in Note 10 to the consolidated financial statements.

REGULATORY MATTERS

SCANA and its subsidiaries are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCANA	The SEC as to the issuance of certain securities and other matters and the FERC as to certain acquisitions and other matters.
SCANA and all subsidiaries	The CFTC to the extent they transact swaps as defined in Dodd-Frank.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions and other matters; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the sale of electric energy at wholesale for resale, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to issuance of short-term borrowings, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.

PSNC Energy	The NCUC as to gas rates, service, issuance of securities (other than notes with a maturity of two years or less or renewals of notes with a maturity of six years or less), accounting and other matters, and the SEC as to the issuance of certain securities.
SCE&G and PSNC Energy	The PHMSA and the DOT as to integrity management requirements for gas distribution pipeline systems and natural gas transmission systems, respectively.
SCANA Energy	The GPSC through its certification as a natural gas marketer in Georgia and specifically as to retail prices for customers served under its regulated provider contract.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of the Company's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Utility Regulation

SCANA's regulated utilities record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, the Company may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of the Company's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of the Company's regulatory assets and liabilities.

The Company's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, the Company could be required to write down its investment in those assets. The Company cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect the Company's results of operations in the period in which they would be recorded. As of December 31, 2014, the Company's net investments in fossil/hydro and nuclear generation assets were approximately $2.3 billion and $3.4 billion, respectively.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers of the Company's utilities and retail gas operations are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, the Company records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization or other regulatory provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. Accounts receivable included unbilled revenues of $186.4 million at December 31, 2014 and $183.1 million at December 31, 2013, compared to total revenues of $5.0 billion and $4.5 billion for the years 2014 and 2013, respectively.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G's accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and timing of cash flows. Changes in any of these estimates could significantly impact the Company's financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Asset Retirement Obligations

The Company accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from the acquisition, construction, development and normal operation in accordance with applicable accounting guidance. The Company recognizes obligations at present value in the period in which they are incurred, and capitalizes associated asset retirement costs as a part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to the Company's regulated utility operations, their recognition has no significant impact on results of operations. As of December 31, 2014, the Company has recorded AROs of $201 million for nuclear plant decommissioning (as discussed above) and AROs of $362 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for the utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

The Company recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. Accounting guidance requires the use of several assumptions that impact pension cost, of which the discount rate and the expected return on assets are the most sensitive. Net pension cost of $2.6 million recorded in 2014 reflects the use of a 5.03% discount rate derived using a cash flow matching technique, and an assumed 8.0% long-term rate of return on plan assets. The Company believes that these assumptions were, and that the resulting pension cost amount was, reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2014 would have increased the Company’s pension cost by $1.6 million and increased the pension obligation by $0.8 million. Further, had the assumed long-term rate of return on assets been 7.75%, the Company’s pension cost for 2014 would have increased by $2.1 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

The Company determines the fair value of a large majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, the Company evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2014, the plan’s historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.4%, 6.0%, 8.3% and 9.3%, respectively. The 2014 expected long-term rate of return of 8.00% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2015, the plan’s historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.0%, 5.4%, 8.7% and 8.8%, respectively. For 2015, the expected rate of return is 7.50%.

Pursuant to regulatory orders, certain previously deferred pension costs are being amortized as described in Note 2 to the consolidated financial statements. Current pension expense for electric operations is being recovered through a pension cost rider, and current pension expense related to SCE&G's gas operations is being recovered through cost of service rates.

Pension benefits are not offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, the significance of pension costs and the criticality of the related estimates to the Company's financial statements will continue to diminish. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

In October 2014 the Society of Actuaries' Retirement Plans Experience Committee published a new RP-2014 mortality table and the related MP-2014 mortality improvement scale, which SCANA adopted effective December 31, 2014. The improvements in life expectancy and the projected rate of continued improvement increased postretirement benefit obligations measured at December 31, 2014, and the net periodic benefit cost to be recognized in 2015. Had SCANA not adopted this new mortality table and mortality improvement scale, the net periodic benefit cost to be recognized in 2015 would have been approximately $3.6 million and $0.2 million lower for pension and other postretirement benefit plans, respectively, and the benefit obligations would have been approximately $26.3 million and $2.7 million lower for pension and other postretirement benefit plans, respectively.

The Company accounts for the cost of its postretirement medical and life insurance benefit plan in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. The Company used a discount rate of 5.19%, derived using a cash flow matching technique, and recorded a net cost of $16.9 million for 2014. Had the selected discount rate been 4.94% (25 basis points lower than the discount rate referenced above), the expense for 2014 would have been $0.6 million higher and the obligation would have been $0.2 million. Because the plan provisions include “caps” on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

NEW NUCLEAR CONSTRUCTION MATTERS

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station.

SCE&G's current ownership share in the New Units is 55%. As discussed below, under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G’s related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G’s weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2014, SCE&G’s investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule, including 146 milestones within that schedule, and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In

December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018. The SCPSC also approved an 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules have been and remain focus areas of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01, as well as shield building modules, are considered critical path items for both New Units. CA20 was placed on the nuclear island of Unit 2 in May 2014. The delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of Unit 2 during the first half of 2015.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in

2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes (including any ultimate disagreements involving the preliminary cost estimates provided by the Consortium in the third quarter of 2014) through both the informal and formal procedures and anticipates that any costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the current milestone schedule and capital costs schedule approved by the SCPSC in November 2012, SCE&G’s estimated cost would be approximately $500 million for the additional 5% interest being acquired from Santee Cooper. This cost figure could be higher in light of the delays and related costs discussed above.

Nuclear Production Tax Credits

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. SCE&G fulfilled the request related to emergency plant staffing in 2012. In addition, SCE&G prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

OTHER MATTERS

Financial Regulatory Reform

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. The Company has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. The Company is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

Off-Balance Sheet Arrangements

SCANA holds insignificant investments in securities and business ventures. SCANA does not engage in significant off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment and rail cars.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments described in this section are held for purposes other than trading.

Interest Rate Risk

The tables below provides information about long-term debt issued by the Company and other financial instruments that are sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average interest rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

December 31, 2014	Expected Maturity Date							
Millions of dollars	2015	2016	2017	2018	2019	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	161.5	110.4	9.5	718.6	8.1	4,529.7	5,537.9	6,437.4
Average Fixed Interest Rate (%)	7.48	1.14	4.62	5.95	4.97	5.29	5.35	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	133.8	155.8	151.2
Average Variable Interest Rate (%)	0.92	0.92	0.92	0.92	0.92	0.48	0.54	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	954.4	104.4	4.4	4.4	4.4	133.8	1,205.8	(256.7)
Average Pay Interest Rate (%)	3.84	3.74	6.17	6.17	6.17	4.70	3.95	—
Average Receive Interest Rate (%)	0.26	0.28	0.92	0.92	0.92	0.47	0.29	—

December 31, 2013	Expected Maturity Date							
Millions of dollars	2014	2015	2016	2017	2018	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	46.7	10.8	109.6	8.7	717.9	4,386.5	5,280.2	5,753.3
Average Fixed Interest Rate (%)	4.83	4.72	1.14	4.84	5.95	5.43	5.40	—
Variable Rate ($)	4.4	4.4	4.4	4.4	4.4	138.2	160.2	154.4
Average Variable Interest Rate (%)	0.94	0.94	0.94	0.94	0.94	0.53	0.59	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	604.4	654.4	4.4	4.4	4.4	141.8	1,413.8	13.0
Average Pay Interest Rate (%)	3.97	4.17	6.17	6.17	6.17	4.72	4.16	—
Average Receive Interest Rate (%)	0.25	0.25	0.94	0.94	0.94	0.49	0.28	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

The above tables exclude long-term debt of $3 million at December 31, 2013 which did not have an associated stated interest rate.

For further discussion of the Company's long-term debt and interest rate derivatives, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

Commodity Price Risk

The following tables provide information about the Company's financial instruments that are sensitive to changes in natural gas prices. Weighted average settlement prices are per 10,000 MMBTU. Fair value represents quoted market prices.

Expected Maturity:

Futures Contracts			Options	
2015	Long	Short	**2015**	Purchased Call (Long)

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. See Note 6 to the consolidated financial statements. The information above includes those financial positions of Energy Marketing and PSNC Energy.

PSNC Energy utilizes futures, options and swaps to hedge gas purchasing activities. PSNC Energy’s tariffs include a provision for the recovery of actual gas costs incurred. PSNC Energy defers premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program for subsequent recovery from customers.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2014 and 2013, and the related consolidated statements of income, comprehensive income, cash flows, and changes in common equity for each of the three years in the period ended December 31, 2014. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2014, based on the criteria established in *Internal Control-Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 27, 2015 expressed an unqualified opinion on the Company's internal control over financial reporting.

Balance as of December 31, 2014	143	$ 2,378	$ 2,684	$ (63)	$ (12)	$ (75)	$ 4,987

Dividends declared per share of common stock were $2.10, $2.03 and $1.98 for 2014, 2013 and 2012, respectively.

See Notes to Consolidated Financial Statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCANA, a South Carolina corporation, is a holding company. The Company engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina and in the purchase, sale and transportation of natural gas to wholesale and retail customers in South Carolina, North Carolina and Georgia. The Company also conducts other energy-related business and provides fiber optic communications in South Carolina.

The accompanying consolidated financial statements reflect the accounts of SCANA and the following wholly-owned subsidiaries.

Regulated businesses	Nonregulated businesses
South Carolina Electric & Gas Company	SCANA Energy Marketing, Inc.
South Carolina Fuel Company, Inc.	SCANA Communications, Inc.
South Carolina Generating Company, Inc.	ServiceCare, Inc.
Public Service Company of North Carolina, Incorporated	SCANA Services, Inc.
Carolina Gas Transmission Corporation	SCANA Corporate Security Services, Inc.

CGT and SCI were sold in the first quarter of 2015. Accordingly, the assets and liabilities of these entities are aggregated and shown as Assets held for sale and Liabilities held for sale in the December 31, 2014 consolidated balance sheet. See Note 13.

The Company reports certain investments using the cost or equity method of accounting, as appropriate. Intercompany balances and transactions have been eliminated in consolidation, with the exception of profits on intercompany sales to regulated affiliates if the sales price is reasonable and the future recovery of the sales price through the rate-making process is probable, as permitted by accounting guidance.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Utility Plant

Utility plant is stated at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset’s life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. The Company’s regulated subsidiaries calculated AFC using average composite rates of 7.2% for 2014, 6.9% for 2013 and 6.3% for 2012. These rates do not exceed the maximum rates allowed in the various regulatory jurisdictions. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

The Company records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. The composite weighted average depreciation rates for utility plant assets were as follows:

	2014	2013	2012
SCE&G	2.85%	2.96%	2.93%
GENCO	2.66%	2.66%	2.66%
CGT	2.11%	2.19%	2.09%
PSNC Energy	2.98%	3.01%	3.01%
Weighted average of above	2.84%	2.93%	2.90%

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in "Fuel used in electric generation" and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2014		2013	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.2 billion	—	$ 1.1 billion	—
Accumulated depreciation	$ 578.3 million	—	$ 566.9 million	—
Construction work in progress	$ 199.3 million	$ 2.7 billion	$ 127.1 million	$ 2.3 billion

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. For a discussion of expected cash outlays and expected in-service dates for the New Units and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $88.9 million at December 31, 2014 and $75.6 million at December 31, 2013.

Plant to be Retired

SCE&G expects to retire three units that are or were coal-fired by 2020, subject to future developments in environmental regulations, among other matters. The net carrying value of these units is identified as Plant to be Retired, Net in the consolidated financial statements. SCE&G plans to request recovery of and a return on the net carrying value of these units in future rate proceedings in connection with their retirement, and expects that such deferred amounts will be recovered through rates. In the meantime, these units remain in rate base, and SCE&G depreciates them using composite straight-line rates approved by the SCPSC. The net carrying value of three previously retired units is recorded in regulatory assets within unrecovered plant (see Note 2).

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued to regulatory assets in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections are classified as a regulatory asset or regulatory liability on the consolidated balance sheet (see Note 2). Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2014 and 2013, SCE&G incurred $19.4 million and $18.1 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. SCE&G accrued $1.2 million per month from July 2011 through December 2012 for its portion of the outages in the fall of 2012. Total costs for the 2012 outage were $32.3 million, of which SCE&G was responsible for $21.5 million. In connection with the SCPSC's December 2012 approval of SCE&G's retail electric rates (see Note 2), effective January 1, 2013, SCE&G began to accrue $1.4 million per month for its portion of the nuclear refueling outages that are scheduled to occur from the spring of 2014 through the spring of 2020. Total costs for the 2014 outage were $43.7 million, of which SCE&G was responsible for $29.1 million.

Goodwill

The Company considers amounts categorized by FERC as “acquisition adjustments” to be goodwill. At December 31, 2014 and 2013, assets with a carrying value of $210 million (net of writedown of $230 million) for PSNC Energy (Gas Distribution segment) were classified as goodwill. Assets with a carrying value of $20 million for CGT (All Other segment) were classified as assets held for sale as of December 31, 2014 and as goodwill as of December 31, 2013. The Company tests goodwill for impairment annually as of January 1, unless indicators, events or circumstances require interim testing to be performed. The goodwill impairment testing is generally a two-step quantitative process which in step one requires estimation of the fair value of the respective reporting unit and the comparison of that amount to its carrying value. If this step indicates an impairment (a carrying value in excess of fair value), then step two, measurement of the amount of the goodwill impairment (if any), is required. Accounting guidance adopted by the Company gives it the option to first perform a qualitative assessment of impairment. Based on this qualitative ("step zero") assessment, if the Company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, the Company is not required to proceed with the two-step quantitative assessment.

In evaluations of PSNC Energy, fair value was estimated using the assistance of an independent appraisal. In evaluations of CGT, estimated fair value was obtained from discounted cash flow and other analysis as of January 1, 2014. In all evaluations for the periods presented, step one has indicated no impairment. The estimated fair values of the reporting units are substantially in excess of their carrying values, and no impairment charges have been recorded; however, should a write-down be required in the future, such a charge would be treated as an operating expense.

Nuclear Decommissioning

Based on a decommissioning cost study, SCE&G’s two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G’s method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each of 2014, 2013 and 2012) are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

The Company considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Accounts Receivable

Accounts receivable reflect amounts due from customers arising from the delivery of energy or related services and include revenues earned pursuant to revenue recognition practices described below. These receivables include both billed and unbilled amounts. Receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.

Inventory

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas and fuel oil. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC or NCUC, as applicable. Emission allowances are included in inventory at average cost. Emission allowances are expensed at weighted average cost as used and recovered through fuel cost recovery rates approved by the SCPSC.

Asset Management and Supply Service Agreements

PSNC Energy utilizes asset management and supply service agreements with counterparties for certain natural gas storage facilities. Such counterparties held 48% and 48% of PSNC Energy's natural gas inventory at December 31, 2014 and December 31, 2013, respectively, with a carrying value of $26.1 million and $22.8 million, respectively, through either capacity release or agency relationships. Under the terms of the asset management agreements, PSNC Energy receives storage asset management fees. No fees are received under supply service agreements. The agreements expire March 31, 2015.

Income Taxes

The Company files a consolidated federal income tax return. Under a joint consolidated income tax allocation agreement, each subsidiary's current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers of the Company's regulated subsidiaries; otherwise, they are charged or credited to income tax expense.

Regulatory Assets and Regulatory Liabilities

The Company's rate-regulated utilities record costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or revenues would be recognized by a nonregulated enterprise. These regulatory assets and liabilities represent expenses deferred for future recovery from customers or obligations to be refunded to customers and are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs in the ratemaking process.

Debt Premium, Discount and Expense, Unamortized Loss on Reacquired Debt

The Company records long-term debt premium and discount within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. For regulated subsidiaries, other issuance expense and gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are expensed as incurred.

Income Statement Presentation

The Company presents the revenues and expenses of its regulated businesses and its retail natural gas marketing businesses (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense).

Revenue Recognition

The Company records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $186.4 million at December 31, 2014 and $183.1 million at December 31, 2013.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. This component is established by the SCPSC during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

SCE&G customers subject to a PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor. PSNC Energy's PGA mechanism authorized by the NCUC allows the recovery of all prudently incurred gas costs, including the results of its hedging program, from customers. Any difference between actual gas costs and amounts contained in rates is deferred and included when establishing gas costs during subsequent PGA filings or in annual prudence reviews.

SCE&G's gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. In August 2010, SCE&G implemented an eWNA on a pilot basis for its electric customers; effective with the first billing cycle of 2014, the eWNA was discontinued as approved by the SCPSC. See Note 2.

PSNC Energy is authorized by the NCUC to utilize a CUT which allows it to adjust base rates semi-annually for residential and commercial customers based on average per customer consumption, whether impacted by weather or other factors.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

Earnings Per Share

The Company computes basic earnings per share by dividing net income by the weighted average number of common shares outstanding for the period. The Company computes diluted earnings per share using this same formula, after giving effect to securities considered to be dilutive potential common stock utilizing the treasury stock method. The Company has issued no securities that would have an antidilutive effect on earnings per share.

A reconciliation of the weighted average number of common shares for each of the three years ended December 31, for basic and diluted purposes is as follows:

In Millions	2014	2013	2012
Weighted Average Shares Outstanding—Basic	141.9	138.7	131.1
Net effect of equity forward contracts	—	0.4	2.2
Weighted Average Shares Outstanding—Diluted	141.9	139.1	133.3

New Accounting Matters

In April 2014, the Financial Accounting Standards Board issued new accounting guidance for reporting discontinued operations and disclosures of disposals of components of an entity. Under this new guidance, only those discontinued operations which represent a strategic shift that will have a major effect on an entity's operations and financial results should be reported as discontinued operations in the financial statements. As permitted, the Company adopted this new guidance for the period ended December 31, 2014.

In May 2014, the Financial Accounting Standards Board issued new accounting guidance for revenue arising from contracts with customers that supersedes most current revenue recognition guidance, including industry-specific guidance. This new revenue recognition model provides a five-step analysis in determining when and how revenue is recognized, and will require revenue recognition to depict the transfer of promised goods or services to customers in an amount that reflects the consideration a company expects to receive in exchange for those goods or services. The Company will be required to adopt the new guidance in the first quarter of 2017, and early adoption is not permitted. The Company has not determined the impact this guidance will have on its results of operations, cash flows or financial position.

2. RATE AND OTHER REGULATORY MATTERS

Rate Matters

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased. In connection with its annual review of base rates for fuel costs, and by order dated April 30, 2013, the SCPSC approved a settlement agreement among SCE&G, the ORS, and the SCEUC in which SCE&G agreed to reduce its environmental fuel cost component effective with the first billing cycle of May 2013. The order also provided for the accrual of certain debt-related carrying costs on a portion of SCE&G's under-collected balance of base fuel costs, and approved SCE&G's total fuel cost component.

Pursuant to a November 2013 SCPSC accounting order, the Company's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

By order dated April 29, 2014, the SCPSC approved a settlement agreement among SCE&G, the ORS, and the SCEUC in which SCE&G agreed to increase its base fuel cost component by approximately $10.3 million for the 12-month period beginning with the first billing cycle of May 2014. The base fuel cost increase was offset by a reduction in SCE&G's rate rider related to pension costs, which was approved by the SCPSC in March 2014. In addition, pursuant to the April 29, 2014 order, the Company's electric revenue for 2014 was reduced by approximately $46 million for adjustments to the fuel cost component and related under-collected fuel balance. Such adjustments are fully offset by the recognition within other income of gains realized from the late 2013 settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. The order also provided for the accrual of certain debt-related carrying costs on its under-collected balance of base fuel costs during the period May 1, 2014 through April 30, 2015. See also Note 6.

The cost of fuel includes amounts paid by SCE&G pursuant to the Nuclear Waste Act for the disposal of spent nuclear fuel. As a result of a November 2013 decision by the Court of Appeals, the DOE set the Nuclear Waste Act fee to zero effective May 16, 2014. The SCPSC will consider the impact of this action in future cost of fuel rate proceedings.

In October 2014, the SCPSC initiated its 2015 annual review of base rates for fuel costs. A public hearing for this annual review is scheduled for April 9, 2015. In connection with its January 2015 DSM Programs filing (see Electric-Base Rates herein), SCE&G notified the SCPSC that it anticipates proposing an adjustment to SCE&G's cost of fuel that, if approved, will result in an overall decrease to its base fuel costs beginning with the first billing cycle of May 2015.

Electric - Base Rates

In October 2013, SCE&G received an accounting order from the SCPSC directing it to remove from rate base deferred income tax assets arising from capital expenditures related to the New Units and to accrue carrying costs (recorded as a regulatory asset) on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G’s weighted average long-term borrowing rate, and $5.8 million and $2.9 million of such carrying costs were accrued within other income during 2014 and 2013, respectively. SCE&G anticipates that when the New Units are placed in service and accelerated tax deprecation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

In December 2012, the SCPSC approved a 4.23% overall increase in SCE&G's retail electric base rates, effective January 1, 2013, and authorized an allowed return on common equity of 10.25%. The SCPSC also approved a mid-period reduction to the cost of fuel component in rates, a reduction in the DSM Programs component rider to retail rates, and the recovery of and a return on the net carrying value of certain retired generating plant assets described below. In February 2013, the SCPSC denied the SCEUC's petition for rehearing and the denial was not appealed.

Prior to 2014, certain of SCE&G's electric rates included an adjustment for eWNA. The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition. In connection with the termination of the eWNA effective December 31, 2013, and pursuant to an SCPSC order, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. This revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives, which gains had been deferred as a regulatory liability.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G previously identified six coal-fired units that it has subsequently retired or intends to retire by 2020, subject to future developments in environmental regulations, among other matters. Three of these units had been retired by December 31, 2013, and their net carrying value is recorded in regulatory assets as unrecovered plant and is being amortized over the units' previously estimated remaining useful lives as approved by the SCPSC. The net carrying value of the remaining units is included in Plant to be Retired, Net. In connection with their retirement, SCE&G expects to be allowed a recovery of and a return on the net carrying value of these remaining units through rates. In the meantime, these units remain in rate base, and SCE&G continues to depreciate them using composite straight-line rates approved by the SCPSC.

SCE&G's DSM Programs for electric customers provide for an annual rider, approved by the SCPSC, to allow recovery of the costs and net lost revenues associated with the DSM Programs, along with an incentive for investing in such programs. SCE&G submits annual filings regarding the DSM Programs, net lost revenues, program costs, incentives and net program benefits. The SCPSC approved recovery of the following amounts pursuant to annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2014	First billing cycle of May	$15.4 million
2013	First billing cycle of May	$16.9 million
2012	First billing cycle of May	$19.6 million

Other activity related to SCE&G’s DSM Programs is as follows:

- In May 2013, the SCPSC ordered the deferral of one-half of the net lost revenues and provided for their recovery over a 12-month period beginning with the first billing cycle in May 2014.
- In April 2014, the SCPSC approved SCE&G's request to (1) recover one-half of the balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2014 and to recover the remaining balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2015, (2) utilize approximately $17.8 million of gains from the late 2013 settlement of certain interest rate derivative instruments, previously deferred as regulatory liabilities, to offset a portion of the net lost revenues component of SCE&G's DSM Program rider, and (3) apply $5.0 million of its storm damage reserve and $5.0 million of the gains from the settlement of certain interest rate derivative instruments to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets resulting from the May 2013 order previously described.
- In addition, in April 2014 the SCPSC, upon recommendation of the ORS, reduced by 25%, or $6.6 million, the amount of net lost revenues SCE&G expects to experience over the 12-month period beginning with the first billing cycle of May 2014, and ordered that the $6.6 million be applied to decrease the amount of program costs deferred for recovery. Actual

net lost revenues not collected in the current DSM Programs rate rider are subject to true up in the following program year.

- In January 2015, SCE&G submitted its annual DSM Programs filing to the SCPSC. If approved, the filing would, among other things, allow recovery of $33.0 million of costs and net lost revenues associated with the DSM Programs, along with an incentive to invest in such programs.

Electric - BLRA

In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. In December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

Under the BLRA, SCE&G is allowed to file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Requested rate adjustments are based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved recovery of the following amounts under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	Increase	Amount
2014	2.8%	$66.2 million
2013	2.9%	$67.2 million
2012	2.3%	$52.1 million

Gas

SCE&G

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	Action	Amount
2014	0.6% Decrease	$2.6 million
2013	No change	
2012	2.1% Increase	$7.5 million

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred, including transportation costs. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2014 and 2013 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each review period were reasonable and prudent.

PSNC Energy

PSNC Energy is subject to a Rider D rate mechanism which allows it to recover from customers all prudently incurred gas costs and certain uncollectible expenses related to gas cost. The Rider D rate mechanism also allows PSNC Energy to recover, in any manner authorized by the NCUC, losses on negotiated gas and transportation sales.

PSNC Energy's rates are established using a benchmark cost of gas approved by the NCUC, which may be periodically adjusted to reflect changes in the market price of natural gas. PSNC Energy revises its tariffs with the NCUC as necessary to track these changes and accounts for any over- or under-collection of the delivered cost of gas in its deferred accounts for subsequent rate consideration. The NCUC reviews PSNC Energy's gas purchasing practices annually. In addition, PSNC Energy utilizes a CUT which allows it to adjust its base rates semi-annually for residential and commercial customers based on average per customer consumption.

In September 2014, in connection with PSNC Energy's 2014 Annual Prudence Review, the NCUC determined that PSNC Energy's gas costs, including all hedging transactions, were reasonable and prudently incurred during the 12 months ended March 31, 2014.

In 2013, the State of North Carolina passed legislation that changed statutes covering income taxes, among other things. In December 2013, the NCUC issued an order notifying utilities that the incremental revenue requirement impact associated with the change in the level of state income tax expense included in each utility's cost of service would be deemed to be collected on a provisional basis (subject to refund) beginning January 1, 2014. On May 13, 2014, the NCUC issued an order requiring utilities to adjust rates to reflect changes in the state corporate income tax rate and to file a proposal to refund amounts collected on a provisional basis. Pursuant to the order, PSNC Energy lowered its rates effective July 1, 2014, and notwithstanding a subsequent reversal of the NCUC's order, PSNC Energy expects to refund amounts collected on a provisional basis through the normal operation of its Rider D rate mechanism. At December 31, 2014, these amounts were not significant.

Regulatory Assets and Regulatory Liabilities

The Company's cost-based, rate-regulated utilities recognize in their financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, the Company has recorded regulatory assets and regulatory liabilities which are summarized in the following tables. Other than unrecovered plant, substantially all regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

	December 31,	
Millions of dollars	**2014**	**2013**
Regulatory Assets:		
Accumulated deferred income taxes	$ 284	$ 259
Under-collections—electric fuel adjustment clause	20	18
Environmental remediation costs	40	41
AROs and related funding	366	368
Franchise agreements	26	31
Deferred employee benefit plan costs	350	238
Planned major maintenance	2	—
Deferred losses on interest rate derivatives	453	124
Deferred pollution control costs	36	37
Unrecovered plant	137	145
DSM Programs	56	51
Other	53	48
Total Regulatory Assets	$ 1,823	$ 1,360
Regulatory Liabilities:		
Accumulated deferred income taxes	$ 22	$ 24
Asset removal costs	703	695
Storm damage reserve	6	27
Monetization of bankruptcy claim	—	29
Deferred gains on interest rate derivatives	82	181
Planned major maintenance	—	10
Other	1	—
Total Regulatory Liabilities	$ 814	$ 966

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to depreciation and are expected to be recovered over the remaining lives of the related property which may range up to approximately 70 years. Similarly, accumulated deferred income tax assets arising from deferred investment tax credits are recorded as a regulatory liability.

Under-collections - electric fuel adjustment clause represent amounts due from customers pursuant to the fuel adjustment clause as approved by the SCPSC which are expected to be recovered in retail electric rates over periods exceeding 12 months.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by the Company, and are expected to be recovered over periods of up to approximately 25 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 90 years.

Franchise agreements represent costs associated with electric and gas franchise agreements with the cities of Charleston and Columbia, South Carolina. Based on an SCPSC order, SCE&G is recovering these amounts through cost of service rates through 2020.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under generally accepted accounting principles. Deferred employee benefit plan costs represent pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. Accordingly, in 2013 SCE&G began recovering through utility rates approximately $63 million of deferred pension costs for electric operations over approximately 30 years and approximately $14 million of deferred pension costs for gas operations over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Planned major maintenance related to certain fossil-fueled turbine/generation equipment and nuclear refueling outages is accrued in periods other than when incurred, as approved pursuant to specific SCPSC orders. SCE&G collects and accrues $18.4 million annually for fossil-fueled turbine/generation equipment maintenance, and collects and accrues $17.2 million annually for nuclear-related refueling charges.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments made or received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt through 2038. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense over periods up to approximately 50 years except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC. Also, in 2014, as discussed above at Rate Matters - Electric - Cost of Fuel and Rate Matters - Electric - Base Rates, certain of these deferred amounts were applied to offset under-collected fuel balances and unrecorded net lost revenues related to DSM Programs.

Deferred pollution control costs represent deferred depreciation and operating and maintenance costs associated with the scrubbers installed at certain coal-fired generating plants pursuant to specific regulatory orders. Such costs are being recovered through utility rates through 2045.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G is amortizing these amounts through cost of service rates over the units' previous estimated remaining useful lives through 2025. Unamortized amounts are included in rate base and are earning a current return.

DSM Programs represent deferred costs associated with such programs. As a result of an April 2014 SCPSC order, deferred costs are currently being recovered over approximately ten years through an approved rate rider. See Rate Matters - Electric - Base Rates above for details regarding the 2014 filing with the SCPSC regarding recovery of these deferred costs.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the non-legal obligation to remove assets in the future.

The storm damage reserve represents an SCPSC-approved collection through SCE&G electric rates, capped at $100 million, which can be applied to offset incremental storm damage costs in excess of $2.5 million in a calendar year. Pursuant to specific regulatory orders, SCE&G has suspended storm damage reserve collection through rates indefinitely. In 2014, $16.8 million of the reserve was applied to offset incremental storm damage costs. Also, as discussed above at Rate Matters - Electric - Base Rates, in April 2014 $5.0 million of the reserve was applied to offset unrecovered net lost revenues related to DSM Programs.

The monetization of bankruptcy claim represented proceeds from the sale of a bankruptcy claim which was being amortized into operating revenue through February 2024. The balance at December 31, 2014 has been reclassified to Liabilities held for sale (see Note 13).

The SCPSC, the NCUC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC, the NCUC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by the Company. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, the Company could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the Company's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. COMMON EQUITY

The Company’s articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture and PSNC Energy’s note purchase and debenture purchase agreements each contain provisions that, under certain circumstances, which the Company considers to be remote, could limit the payment of cash dividends on their respective common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2014 and 2013, retained earnings of approximately $67.7 million and $63.1 million, respectively, were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

Authorized shares of common stock were 200 million as of December 31, 2014 and 2013.

SCANA issued common stock valued at $99.3 million, $100.9 million and $97.7 million (when issued) during the years ended December 31, 2014, 2013 and 2012, respectively, to satisfy the requirements of various compensation and dividend reinvestment plans. In addition, in March 2013, SCANA settled all forward sales contracts related to its common stock through the issuance of approximately 6.6 million common shares, resulting in net proceeds of approximately $196.2 million.

4. LONG-TERM AND SHORT-TERM DEBT

Long-term debt by type with related weighted average effective interest rates and maturities at December 31 is as follows:

Dollars in millions	Maturity	2014 Balance	2014 Rate	2013 Balance	2013 Rate
Medium Term Notes (unsecured)	2020 - 2022	$ 800	5.42%	$ 800	5.42%
Senior Notes (unsecured) (a)	2015 - 2034	88	0.93%	92	0.94%
First Mortgage Bonds (secured)	2018 - 2064	3,840	5.56%	3,540	5.60%
Junior Subordinated Notes (unsecured) (b)	2065	150	7.92%	150	7.92%
GENCO Notes (secured)	2015 - 2024	227	5.90%	233	5.89%
Industrial and Pollution Control Bonds (c)	2028 - 2038	122	3.51%	158	3.83%
Senior Debentures	2020 - 2026	350	5.93%	350	5.93%
Nuclear Fuel Financing	2016	100	0.78%	100	0.78%
Other	2015 - 2027	17	2.90%	20	2.73%
Total debt		5,694		5,443	
Current maturities of long-term debt		(166)		(54)	
Unamortized premium		3		6	
Total long-term debt, net		$ 5,531		$ 5,395	

(a) Variable rate notes hedged by a fixed interest rate swap (fixed rate of 6.17%)
(b) Redeemed at par prior to maturity on February 2, 2015, and included in the current portion of long-term debt on the balance sheet at December 31, 2014.
(c) Includes variable rate debt of $67.8 million at December 31, 2014 (rate of 0.04%) and 2013 (rate of 0.11%) which are hedged by fixed swaps.

The annual amounts of long-term debt maturities for the next five years are summarized as follows:

Year	Millions of dollars
2015	$ 166
2016	115
2017	14
2018	723
2019	13

Substantially all of SCE&G's and GENCO's electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2014, the Bond Ratio was 5.41.

Lines of Credit and Short-Term Borrowings

At December 31, 2014 and 2013, SCANA, SCE&G (including Fuel Company) and PSNC Energy had available the following committed LOC and had outstanding the following LOC-related obligations and commercial paper borrowings:

	SCANA		SCE&G		PSNC Energy	
Millions of dollars	**2014**	**2013**	**2014**	**2013**	**2014**	**2013**
Lines of Credit:						
Total committed long-term	$ 300	300	1,400	1,400	100	100
Outstanding commercial paper (270 or fewer days)	$ 179	$ 125	$ 709	$ 251	$ 30	—
Weighted average interest rate	0.54%	0.39%	0.52%	0.27%	0.65%	—
Letters of credit supported by LOC	$ 3	$ 3	$ 0.3	$ 0.3	—	—
Available	$ 118	$ 172	$ 691	$ 1,149	$ 70	$ 100

SCANA, SCE&G (including Fuel Company) and PSNC Energy are parties to five-year credit agreements in the amounts of $300 million, $1.2 billion (of which $500 million relates to Fuel Company) and $100 million, respectively. In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In October 2014, the term of the five-year agreements was extended by one year, such that they expire in October 2019. The three-year agreement expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N.A. and Morgan Stanley Bank, N.A. each provide 10.7% of the aggregate $1.8 billion credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch and UBS Loan Finance LLC each provide 8.9%, and Branch Banking and Trust Company, Union Bank, N.A. and U.S. Bank National Association each provide 6.3%. Two other banks provide the remaining support. The Company pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

On January 29, 2015, SCANA entered into an unsecured, three-month credit agreement in the amount of $150 million. SCANA entered this agreement to ensure sufficient liquidity was available to redeem its junior subordinated notes on February 2, 2015. No borrowings were made under this agreement, and it expired according to its terms on February 6, 2015.

The Company is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by TD Bank N.A. The letters of credit expire, subject to renewal, in the fourth quarter of 2019.

The Company pays fees to the banks as compensation for maintaining committed lines of credit. Such fees were not material in any period presented.

5. INCOME TAXES

Components of income tax expense are as follows:

Millions of dollars	2014	2013	2012
Current taxes:			
Federal	$ 38	$ 161	$ 103
State	(4)	17	10
Total current taxes	34	178	113
Deferred taxes, net:			
Federal	184	39	72
State	34	10	14
Total deferred taxes	218	49	86
Investment tax credits:			
Amortization of amounts deferred-state	(1)	(1)	(14)
Amortization of amounts deferred-federal	(3)	(3)	(3)
Total investment tax credits	(4)	(4)	(17)
Total income tax expense	$ 248	$ 223	$ 182

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2014	2013	2012
Net income	$ 538	$ 471	$ 420
Income tax expense	248	223	182
Total pre-tax income	$ 786	$ 694	$ 602
Income taxes on above at statutory federal income tax rate	$ 275	$ 243	$ 211
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	24	22	19
State investment tax credits (less federal income tax effect)	(5)	(5)	(13)
Allowance for equity funds used during construction	(11)	(9)	(8)
Deductible dividends—Stock Purchase Savings Plan	(10)	(10)	(9)
Amortization of federal investment tax credits	(3)	(3)	(3)
Section 41 tax credits	(3)	—	—
Section 45 tax credits	(9)	(5)	(5)
Domestic production activities deduction	(7)	(11)	(9)
Other differences, net	(3)	1	(1)
Total income tax expense	$ 248	$ 223	$ 182

The tax effects of significant temporary differences comprising the Company's net deferred tax liability are as follows:

Millions of dollars	2014	2013
Deferred tax assets:		
Nondeductible accruals	$ 127	$ 84
Asset retirement obligation, including nuclear decommissioning	216	220
Financial instruments	40	32
Unamortized investment tax credits	17	19
Regulatory liability, net gain on interest rate derivative contracts settlement	—	27
Monetization of bankruptcy claim	10	11
Other	10	13
Total deferred tax assets	420	406
Deferred tax liabilities:		
Property, plant and equipment	$ 1,928	$ 1,765
Deferred employee benefit plan costs	107	63
Regulatory asset, asset retirement obligation	122	121
Deferred fuel costs	27	25
Regulatory asset, unrecovered plant	53	55
Regulatory asset, net loss on interest rate derivative contracts settlement	21	—
Demand side management costs	21	21
Prepayments	27	25
Other	45	38
Total deferred tax liabilities	2,351	2,113
Net deferred tax liability	$ 1,931	$ 1,707

During the third quarter of 2013, the State of North Carolina passed legislation that lowered the state corporate income tax rate from 6.9% to 6.0% in 2014 and 5.0% in 2015. In connection with this change in tax rates, related state deferred tax amounts were remeasured, with the change in their balances being credited to a regulatory liability. The change in income tax rates did not and is not expected to have a material impact on the Company's financial position, results of operations or cash flows. Additionally, during the third quarter of 2013, the IRS issued final regulations regarding the capitalization of certain costs for income tax purposes and re-proposed certain other related regulations (collectively referred to as tangible personal property regulations). Related IRS revenue procedures were then issued on January 24, 2014. These regulations did not and are not expected to, have a material impact on the Company's financial position, results of operations or cash flows.

The Company files a consolidated federal income tax return, and the Company and its subsidiaries file various applicable state and local income tax returns. The IRS has completed examinations of the Company's federal returns through 2004, and the Company's federal returns through 2007 are closed for additional assessment. The IRS is currently examining SCANA's open federal returns through 2012. With few exceptions, the Company is no longer subject to state and local income tax examinations by tax authorities for years before 2010.

Changes to Unrecognized Tax Benefits

Millions of dollars	2014	2013	2012
Unrecognized tax benefits, January 1	$ 3	—	$ 38
Gross increases—uncertain tax positions in prior period	—	—	—
Gross decreases—uncertain tax positions in prior period	—	—	(38)
Gross increases—current period uncertain tax positions	13	$ 3	—
Settlements	—	—	—
Lapse of statute of limitations	—	—	—
Unrecognized tax benefits, December 31	$ 16	$ 3	$ —

In connection with the change in method of tax accounting for certain repair costs in prior years, the Company had previously recorded an unrecognized tax benefit. During the first quarter of 2012, the publication of new administrative guidance from the IRS allowed the Company to recognize this benefit. Since this change was primarily a temporary difference, the recognition of this benefit did not have a significant effect on the Company's effective tax rate.

During 2013 and 2014, the Company amended certain of its tax returns to claim certain tax-defined research and development deductions and credits. In connection with these filings, the Company recorded an unrecognized tax benefit of $16 million. If recognized, $13 million of the tax benefit would affect the Company's effective tax rate. It is reasonably possible that this tax benefit will increase by an additional $2 million within the next 12 months. It is also reasonably possible that this tax benefit may decrease by $7 million within the next 12 months. No other material changes in the status of the Company's tax positions have occurred through December 31, 2014.

As of December 31, 2014, prepayments primarily relates to the late 2014 extension of the 50% bonus depreciation deduction. Further, a current deferred tax liability of $51.3 million related to the sales of CGT and SCI is included within other current liabilities.

The Company recognizes interest accrued related to unrecognized tax benefits within interest expense and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit in 2012, during 2012 the Company reversed $2 million of interest expense which had been accrued during 2011. The Company has not recorded interest expense or penalties associated with uncertain tax positions in 2013 or 2014.

6. DERIVATIVE FINANCIAL INSTRUMENTS

The Company recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. The Company recognizes changes in the fair value of derivative instruments either in earnings, as a component of other comprehensive income (loss) or, for regulated subsidiaries, within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by the Company. SCANA's Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries. The Risk Management Committee, which is comprised of certain officers, including the Company's Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to their attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Commodity Derivatives

The Company uses derivative instruments to hedge forward purchases and sales of natural gas, which create market risks of different types. Instruments designated as cash flow hedges are used to hedge risks associated with fixed price obligations in a volatile market and risks associated with price differentials at different delivery locations. Instruments designated as fair value hedges are used to mitigate exposure to fluctuating market prices created by fixed prices of stored natural gas. The basic types of financial instruments utilized are exchange-traded instruments, such as NYMEX futures contracts or options, and over-the-counter instruments such as options and swaps, which are typically offered by energy companies and financial institutions. Cash settlements of commodity derivatives are classified as operating activities in the consolidated statement of cash flows.

PSNC Energy hedges natural gas purchasing activities using over-the-counter options and swaps and NYMEX futures and options. PSNC Energy's tariffs also include a provision for the recovery of actual gas costs incurred, including any costs of hedging. PSNC Energy records premiums, transaction fees, margin requirements and any realized gains or losses from its hedging program in deferred accounts as a regulatory asset or liability for the over- or under-recovery of gas costs. These derivative financial instruments are not designated as hedges for accounting purposes.

Unrealized gains and losses on qualifying cash flow hedges of nonregulated operations are deferred in AOCI. When the hedged transactions affect earnings, previously recorded gains and losses are reclassified from AOCI to cost of gas. The effects of gains or losses resulting from these hedging activities are either offset by the recording of the related hedged transactions or are included in gas sales pricing decisions made by the business unit.

As an accommodation to certain customers, SEMI, as part of its energy management services, offers fixed price supply contracts which are accounted for as derivatives. These sales contracts are offset by the purchase of supply futures and swaps which are also accounted for as derivatives. Neither the sales contracts nor the related supply futures and swaps are designated as hedges for accounting purposes.

Interest Rate Swaps

The Company may use interest rate swaps to manage interest rate risk and exposure to changes in fair value attributable to changes in interest rates on certain debt issuances. In cases in which the Company synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges, periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, the Company may use treasury rate lock or forward starting swap agreements that are designated as cash flow hedges. Except as described in the following paragraph, the effective portions of changes in fair value and payments made or received upon termination of such agreements for regulated subsidiaries are recorded in regulatory assets or regulatory liabilities. For the holding company or nonregulated subsidiaries, such amounts are recorded in AOCI. Such amounts are amortized to interest expense over the term of the underlying debt. Ineffective portions of fair value changes are recognized in income.

Pursuant to regulatory orders issued in 2013, interest derivatives entered into by SCE&G after October 2013 are not designated as cash flow hedges and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Settlement losses on swaps will be amortized over the lives of subsequent debt issuances and gains may be applied to under-collected fuel, may be amortized to interest expense or may be applied as otherwise directed by the SCPSC. As discussed in Note 2, the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013. As also discussed in Note 2, pursuant to regulatory orders issued in 2014, the SCPSC directed SCE&G to apply $46 million of these deferred gains to reduce under-collected fuel balances in April 2014. The SCPSC also approved SCE&G’s request to utilize approximately $17.8 million of these gains to offset a portion of the net lost revenues component of SCE&G’s DSM Program rider and apply $5.0 million of the gains to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

The Company was party to natural gas derivative contracts outstanding in the following quantities:

	Commodity and Other Energy Management Contracts (in MMBTU)			
Hedge designation	**Gas Distribution**	**Retail Gas Marketing**	**Energy Marketing**	**Total**
As of December 31, 2014				
Commodity	6,840,000	7,951,000	3,446,720	18,237,720
Energy Management (a)	—	—	37,495,339	37,495,339

Total (b)	6,070,000	6,726,000	29,919,958	42,715,958

(a) Includes an aggregate 933,893 MMBTU related to basis swap contracts in Energy Marketing.
(b) Includes an aggregate 348,453 MMBTU related to basis swap contracts in Energy Marketing.

The Company was party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $124.4 million at December 31, 2014, and $128.8 million at December 31, 2013. The Company was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.1 billion and $1.3 billion at December 31, 2014 and 2013, respectively.

The fair value of derivatives in the consolidated balance sheets is as follows:

Fair Values of Derivative Instruments	**Asset Derivatives**		**Liability Derivatives**	
Millions of dollars	**Balance Sheet Location**	**Fair Value**	**Balance Sheet Location**	**Fair Value**
As of December 31, 2014				
Designated as hedging instruments				
Interest rate contracts			Derivative financial instruments	$ 5

Derivatives Designated as Fair Value Hedges

The Company had no interest rate or commodity derivatives designated as fair value hedges for any period presented.

Derivatives in Cash Flow Hedging Relationships

The effect of derivative instruments on the consolidated statements of income is as follows:

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts (Effective Portion)		Loss Reclassified from Deferred Accounts into Income (Effective Portion) Location	Amount	
Year Ended December 31, 2014					
Interest rate contracts	$	(9)	Interest expense	$	(3)
Year Ended December 31, 2013					
Interest rate contracts	$	106	Interest expense	$	(3)
Year Ended December 31, 2012					
Interest rate contracts	$	84	Interest expense	$	(3)

Millions of dollars	Gain or (Loss) Recognized in OCI, net of tax (Effective Portion)		Gain (Loss) Reclassified from AOCI into Income, net of tax (Effective Portion) Location	Amount	
Year Ended December 31, 2014					
Interest rate contracts	$	(6)	Interest expense	$	(7)
Commodity contracts		(8)	Gas purchased for resale		4
Total	$	(14)		$	(3)
Year Ended December 31, 2013					
Interest rate contracts	$	5	Interest expense	$	(8)
Commodity contracts		2	Gas purchased for resale		(3)
Total	$	7		$	(11)
Year Ended December 31, 2012					
Interest rate contracts	$	(4)	Interest expense	$	(6)
Commodity contracts		(4)	Gas purchased for resale		(13)
Total	$	(8)		$	(19)

As of December 31, 2014, the Company expects that during the next 12 months reclassifications from accumulated other comprehensive loss to earnings arising from cash flow hedges will include approximately $10.0 million as an increase to gas cost and approximately $7.1 million as an increase to interest expense, assuming natural gas and financial markets remain at their current levels. As of December 31, 2014, all of the Company's commodity cash flow hedges settle by their terms before the end of 2017.

As of December 31, 2014, the Company expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from cash flow hedges designated as hedging instruments will include approximately $2.3 million as an increase to interest expense assuming financial markets remain at their current levels.

Hedge Ineffectiveness

Other gain (losses) recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant for all periods presented.

Derivatives Not Designated as Hedging Instruments

Millions of dollars	Loss Recognized in Income Location	Year Ended December 31, 2014	2013	2012	
Commodity contracts	Gas purchased for resale	—	—	$	(1)

Millions of dollars	Gain (Loss) Deferred in Regulatory Accounts		Gain Reclassified from Deferred Accounts into Income Location		Amount
Year Ended December 31, 2014					
Interest rate contracts	$	(352)	Other income	$	64
Year Ended December 31, 2013					
Interest rate contracts	$	39	Other income	$	50
Year Ended December 31, 2012					
Interest rate contracts		—			—

Gains reclassified to other income offset revenue reductions as previously described herein and in Note 2.

As of December 31, 2014, the Company expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from interest rate swaps not designated as cash flow hedges will include approximately $5.2 million as an increase to other income.

Credit Risk Considerations

The Company limits credit risk in its commodity and interest rate derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, the Company uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. The Company uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with the Company's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of the Company's derivative instruments contain contingent provisions that require the Company to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2014 and 2013, the Company had posted $152.4 million and $26.8 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months is recorded in Other Current Assets on the consolidated balance sheets. Collateral related to the noncurrent positions is recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2014 and 2013, the Company would have been required to post an additional $129.8 million and $- million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2014 and 2013, are $282.2 million and $25.2 million, respectively.

In addition, as of December 31, 2014 and December 31, 2013, the Company has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2014 and December 31, 2013, the Company could request $- million and $34.1 million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2014 and December 31, 2013 is $- million and $34.1 million, respectively. In addition, at December 31, 2014, the Company could have called on letters of credit in the amount of $9.2 million related to $20 million in commodity derivatives that are in a net asset position, compared to letters of credit of $6 million related to derivatives of $6 million at December 31, 2013, if all the contingent features underlying these instruments had been fully triggered.

Information related to the Company's offsetting derivative assets and liabilities follows:

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

The Company values available for sale securities using quoted prices from a national stock exchange, such as the NASDAQ, where the securities are actively traded. For commodity derivative and energy management assets and liabilities, the Company uses unadjusted NYMEX prices to determine fair value, and considers such measures of fair value to be Level 1 for exchange traded instruments and Level 2 for over-the-counter instruments. The Company's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	As of December 31, 2014		As of December 31, 2013	
Millions of dollars	**Level 1**	**Level 2**	**Level 1**	**Level 2**
Assets:				
Available for sale securities	$ 13	—	$ 9	—
Interest rate contracts	—	—	—	$ 32
Commodity contracts	1	—	2	2
Energy management contracts	—	$ 20	1	7
Liabilities:				
Interest rate contracts	—	257	—	20
Commodity contracts	1	11	—	—
Energy management contracts	5	18	—	12

There were no Level 3 fair value measurements for either period presented, and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2014 and December 31, 2013 were as follows:

	As of December 31, 2014		As of December 31, 2013	
Millions of dollars	**Carrying Amount**	**Estimated Fair Value**	**Carrying Amount**	**Estimated Fair Value**
Long-term debt	$ 5,697.2	$ 6,592.1	$ 5,449.3	$ 5,916.3

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

The Company sponsors a noncontributory defined benefit pension plan covering substantially all regular, full-time employees hired before January 1, 2014. Benefits are no longer offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. The Company's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

The Company's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all eligible employees hired subsequently. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, the Company provides certain unfunded postretirement health care and life insurance benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost. Employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

	Pension Benefits		Other Postretirement Benefits	
Millions of dollars	**2014**	**2013**	**2014**	**2013**
Benefit obligation, January 1	$ 823.0	$ 931.6	$ 238.0	$ 265.3
Service cost	20.0	21.8	4.6	5.9
Interest cost	40.4	38.5	12.0	11.1
Plan participants' contributions	—	—	2.2	2.6
Actuarial (gain) loss	100.1	(83.4)	23.5	(35.1)
Benefits paid	(64.0)	(60.0)	(12.1)	(11.8)
Curtailment	—	(25.5)	—	—
Benefit obligation, December 31	$ 919.5	$ 823.0	$ 268.2	$ 238.0

The accumulated benefit obligation for pension benefits was $888.3 million at the end of 2014 and $796.4 million at the end of 2013. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

	Pension Benefits		Other Postretirement Benefits	
	2014	**2013**	**2014**	**2013**
Annual discount rate used to determine benefit obligation	4.20%	5.03%	4.30%	5.19%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.00%	3.00%	3.75%

A 7.0% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2014. The rate was assumed to decrease gradually to 5.0% for 2020 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation by $1.1 million at December 31, 2014 and by $1.3 million at December 31, 2013. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation by $1.0 million at December 31, 2014 and by $1.2 million at December 31, 2013.

Funded Status

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	**2014**	**2013**	**2014**	**2013**
Fair value of plan assets	$ 861.8	$ 870.0	—	—
Benefit obligation	919.5	823.0	$ 268.2	$ 238.0
Funded status	$ (57.7)	$ 47.0	$ (268.2)	$ (238.0)

Amounts recognized on the consolidated balance sheets were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2014	2013	2014	2013
Current liability	—	—	$ (11.2)	$ (11.5)
Noncurrent asset	—	$ 47.0	—	—
Noncurrent liability	$ (57.7)	—	(257.0)	(226.5)

Amounts recognized in accumulated other comprehensive loss (a component of common equity) as of December 31, 2014 and 2013 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2014	2013	2014	2013
Net actuarial loss	$ 8.1	$ 5.2	$ 3.0	$ 1.7
Prior service cost	0.3	0.5	0.1	0.1
Total	$ 8.4	$ 5.7	$ 3.1	$ 1.8

Amounts recognized in regulatory assets as of December 31, 2014 and 2013 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2014	2013	2014	2013
Net actuarial loss	$ 222.1	$ 124.8	$ 43.8	$ 24.4
Prior service cost	9.6	12.8	0.6	0.9
Total	$ 231.7	$ 137.6	$ 44.4	$ 25.3

In connection with the joint ownership of Summer Station, as of December 31, 2014 and 2013, the Company recorded within deferred debits $17.8 million and $14.1 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2014 and 2013, the Company also recorded within deferred debits $15.1 million and $12.6 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2014	2013
Fair value of plan assets, January 1	$ 870.0	$ 799.1
Actual return on plan assets	55.8	130.9
Benefits paid	(64.0)	(60.0)
Fair value of plan assets, December 31	$ 861.8	$ 870.0

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. The pension plan is closed to new entrants effective January 1, 2014, and benefit accruals will cease effective January 1, 2024. In addition, during 2013, the Company adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs in connection with the amendments to the plan.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The Company's pension plan asset allocation at December 31, 2014 and 2013 and the target allocation for 2015 are as follows:

	Percentage of Plan Assets		
	Target Allocation	At December 31,	
Asset Category	2015	2014	2013
Equity Securities	58%	57%	59%
Fixed Income	33%	34%	32%
Hedge Funds	9%	9%	9%

For 2015, the expected long-term rate of return on assets will be 7.50%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes an asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment strategy adopted for 2013.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2014 and 2013, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	Fair Value Measurements at Reporting Date Using						
Millions of dollars	Total	Level 2	Level 3	Total	Level 1	Level 2	Level 3
	December 31, 2014			*December 31, 2013*			
Common stock	—	—	—	$ 332	$ 332	—	—
Preferred stock	—	—	—	1	1	—	—
Mutual funds	$ 622	$ 622	—	305	20	$ 285	—
Short-term investment vehicles	20	20	—	19	—	19	—
US Treasury securities	6	6	—	33	—	33	—
Corporate debt securities	86	86	—	53	—	53	—
Loans secured by mortgages	—	—	—	12	—	12	—
Municipals	15	15	—	4	—	4	—
Limited partnerships	32	32	—	35	1	34	—
Multi-strategy hedge funds	81	—	$ 81	76	—	—	$ 76
	$ 862	$ 781	$ 81	$ 870	$ 354	$ 440	$ 76

At December 31, 2014, assets with fair value measurements classified as Level 1 were insignificant. There were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during 2014 or 2013.

The pension plan values common stock, preferred stock and certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds, common collective trusts and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Loans secured by mortgages are valued using observable prices based on trade data for identical or comparable instruments. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

	Fair Value Measurements Level 3	
Millions of dollars	**2014**	**2013**
Beginning Balance	$ 76	$ 70
Unrealized gains included in changes in net assets	5	6
Purchases, issuances, and settlements	—	—
Ending Balance	$ 81	$ 76

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from the Company's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	Pension Benefits	Other Postretirement Benefits
2015	$ 63.4	$ 11.5
2016	64.5	12.4
2017	65.6	13.1
2018	66.1	13.8
2019	65.1	14.6
2020-2024	338.4	81.8

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, the Company does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

The Company records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**
Service cost	$ 20.0	$ 21.8	$ 19.6	$ 4.6	$ 5.9	$ 4.8
Interest cost	40.4	38.5	43.0	12.0	11.1	11.9
Expected return on assets	(66.7)	(61.4)	(59.5)	n/a	n/a	n/a
Prior service cost amortization	4.1	6.0	7.0	0.3	0.7	0.9
Amortization of actuarial losses	4.8	16.9	18.4	—	3.3	1.4
Transition obligation amortization	—	—	—	—	0.3	0.7
Curtailment	—	9.9	—	—	—	—
Net periodic benefit cost	$ 2.6	$ 31.7	$ 28.5	$ 16.9	$ 21.3	$ 19.7

In connection with regulatory orders, in 2013 SCE&G began recovering current pension expense through a rate rider that may be adjusted annually (for retail electric operations) or through cost of service rates (for gas operations). SCE&G is amortizing previously deferred pension costs as further described in Note 2.

Other changes in plan assets and benefit obligations recognized in other comprehensive income (net of tax) were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**
Current year actuarial (gain) loss	$ 3.1	$ (5.0)	$ 1.7	$ 1.3	$ (1.8)	$ 2.0
Amortization of actuarial losses	(0.2)	(0.5)	(0.6)	—	(0.2)	—
Amortization of prior service cost	(0.2)	(0.2)	(0.2)	—	—	—
Prior service cost (credit)	—	(0.3)	—	—	—	—
Amortization of transition obligation	—	—	—	—	(0.1)	(0.1)
Total recognized in OCI	$ 2.7	$ (6.0)	$ 0.9	$ 1.3	$ (2.1)	$ 1.9

Other changes in plan assets and benefit obligations recognized in regulatory assets were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**
Current year actuarial (gain) loss	$ 101.3	$ (157.5)	$ 45.0	$ 19.4	$ (29.9)	$ 31.4
Amortization of actuarial losses	(4.0)	(14.7)	(16.0)	—	(2.7)	(1.2)
Amortization of prior service cost	(3.2)	(5.2)	(6.4)	(0.3)	(0.6)	(0.8)
Prior service cost (credit)	—	(8.9)	—	—	—	—
Amortization of transition obligation	—	—	—	—	(0.2)	(0.5)
Total recognized in regulatory assets	$ 94.1	$ (186.3)	$ 22.6	$ 19.1	$ (33.4)	$ 28.9

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
	2014	**2013**	**2012**	**2014**	**2013**	**2012**
Discount rate	5.03%	4.10%/5.07%	5.25%	5.19%	4.19%	5.35%
Expected return on plan assets	8.00%	8.00%	8.25%	n/a	n/a	n/a
Rate of compensation increase	3.00%	3.75%/3.00%	4.00%	3.75%	3.75%	4.00%
Health care cost trend rate	n/a	n/a	n/a	7.40%	7.80%	8.20%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2020

Net periodic benefit cost for the period through September 1, 2013 was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The estimated amounts to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2015 are as follows:

Millions of Dollars	**Pension Benefits**	**Other Postretirement Benefits**
Actuarial loss	$ 0.5	$ 0.1
Prior service cost	0.1	—
Total	$ 0.6	$ 0.1

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2015 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 12.3	$ 1.9
Prior service cost	3.6	0.3
Total	$ 15.9	$ 2.2

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

Stock Purchase Savings Plan

The Company sponsors a defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. The Company provides 100% matching contributions up to 6% of an employee’s eligible earnings. Total matching contributions made to the plan were $25.8 million in 2014, $23.4 million in 2013 and $22.3 million in 2012 and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

The LTECP provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA’s common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

Liability Awards

The 2012-2014, 2013-2015 and 2014-2016 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three-year performance cycle. In each performance cycle, 20% of the performance award was granted in the form of restricted share units, which are liability awards payable in cash and are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to exceptions for retirement, death, disability or change in control. The remaining 80% of the award was granted in performance shares, which are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to exceptions for retirement, death or disability. Each performance share has a value that is equal to, and changes with, the value of a share of SCANA common stock. Dividend equivalents are accrued on the performance shares and the restricted share units. Payouts of performance share awards are determined by SCANA’s performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in “GAAP-adjusted net earnings per share from operations” (weighted 50%).

Compensation cost of liability awards is recognized over their respective three-year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2012-2014 performance cycle were paid in cash at SCANA’s discretion in February 2015. Cash-settled liabilities related to the performance cycles were paid totaling approximately $11.8 million in 2014, $12.2 million in 2013, and $11.8 million in 2012.

Fair value adjustments for performance awards resulted in compensation expense recognized in the statements of income totaling approximately $20.3 million in 2014, $8.7 million in 2013 and $15.0 million in 2012. Fair value adjustments resulted in capitalized compensation costs of $3.1 million in 2014, $1.4 million in 2013 and $2.7 million in 2012.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.6 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million in limits of accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $43.5 million.

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Company's results of operations, cash flows and financial position.

New Nuclear Construction

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station.

SCE&G's current ownership share in the New Units is 55%. As discussed below, under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G's weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2014, SCE&G's investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule, including 146 milestones within that schedule, and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018. The SCPSC also approved an 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules have been and remain focus areas of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01, as well as shield building modules, are considered critical path items for both New Units. CA20 was placed on the nuclear island of Unit 2 in May 2014. The delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of Unit 2 during the first half of 2015.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in 2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes (including any ultimate disagreements involving the preliminary cost estimates provided by the Consortium in the third quarter of 2014) through both the informal and formal procedures and anticipates that any costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the current milestone schedule and capital costs schedule approved by the SCPSC in November 2012, SCE&G’s estimated cost would be approximately $500 million for the additional 5% interest being acquired from Santee Cooper. This cost figure could be higher in light of the delays and related costs discussed above.

Nuclear Production Tax Credits

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. SCE&G fulfilled the request related to emergency plant staffing in 2012. In addition, SCE&G prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

Environmental

The Company's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on the Company's financial condition, results of operations and cash flows. In addition, the Company often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, the Company expects to recover such expenditures and costs through existing ratemaking provisions.

SCE&G

The EPA issued a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The proposed rule was issued on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. The Company is evaluating the proposed rule, but does not plan to construct new coal-fired units in the near future. In addition, on June 2, 2014, the EPA issued proposed emission guidelines for states to follow in developing plans to address GHG emissions from existing units. These guidelines are to be made final no later than June 1, 2015, and include state-specific rate based goals for carbon dioxide emissions.

From a regulatory perspective, SCANA, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

In July 2011, the EPA issued the CSAPR to reduce emissions of sulfur dioxide and nitrogen oxide from power plants in the eastern half of the United States. A series of court actions stayed this rule until October 23, 2014, when the Court of Appeals granted a motion to lift the stay. On December 3, 2014, the EPA published an interim final rule that aligns the dates in the CSAPR text with the revised court-ordered schedule, thus delaying the implementation dates to 2015 for Phase 1 and to 2017 for Phase 2. The CSAPR replaces the CAIR and requires a total of 28 states to reduce annual sulfur dioxide emissions and annual or ozone season nitrogen oxide emissions to assist in attaining the ozone and fine particle NAAQS. The rule establishes an emissions cap for sulfur dioxide and nitrogen oxide and limits the trading for emission allowances by separating affected states into two groups with no trading between the groups. Air quality control installations that SCE&G and GENCO have already completed have positioned them to comply with the allowances set by the CSAPR.

In April 2012, the EPA's MATS rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for generating facilities to meet the standards, and the Company's evaluation of the rule is ongoing. The Company's decision to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in the Company's compliance with MATS. On November 19, 2014, the EPA finalized its reconsideration of certain provisions applicable during startup and shutdown of generating facilities. SCE&G and GENCO have received a one year extension (until April 2016) to comply with MATS at the Cope, McMeekin, Wateree and Williams Stations. These extensions will allow time to convert McMeekin Station to burn natural gas and to install additional pollution control devices at the other plants that will enhance the control of certain MATS-regulated pollutants.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility’s NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized no later than September 30, 2015. Once the rule becomes effective, state regulators will modify facility NPDES permits to match more restrictive standards, thus requiring facilities to retrofit with new wastewater treatment technologies. Compliance dates will vary by type of wastewater, and some will be based on a facility's five year permit cycle and thus may range from 2018 to 2023. Based on the proposed rule, the Company expects that wastewater treatment technology retrofits will be required at Williams and Wateree Stations and may be required at other facilities.

The CWA Section 316(b) Existing Facilities Rule became effective on October 14, 2014. This rule establishes national requirements for the location, design, construction and capacity of cooling water intake structures at existing facilities that reflect the best technology available for minimizing the adverse environmental impacts of impingement and entrainment. SCE&G and GENCO are conducting studies and implementing plans to ensure compliance with this rule. In addition, Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones.

On December 19, 2014, the EPA issued a final rule for CCR, which is expected to become effective in 2015. This rule regulates CCR as a non-hazardous waste under Subtitle D of the Resource Conservation and Recovery Act. In addition, this rule imposes certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2014, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017 and is constructing a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. The states of South Carolina and North Carolina have similar laws. The Company maintains an environmental assessment program to identify and evaluate current and former operations sites that could require clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify the Company that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue until 2017 and will cost an additional $19.3 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2014, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $35.5 million and are included in regulatory assets.

PSNC Energy

PSNC Energy is responsible for environmental clean-up at five sites in North Carolina on which MGP residuals are present or suspected. Actual remediation costs for these sites will depend on a number of factors, such as actual site conditions, third-party claims and recoveries from other PRPs. PSNC Energy has recorded a liability and associated regulatory asset of approximately $1.0 million, the estimated remaining liability at December 31, 2014. PSNC Energy expects to recover through rates any cost allocable to PSNC Energy arising from the remediation of these sites.

Claims and Litigation

The Company is subject to various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on the Company's results of operations, cash flows or financial condition.

Operating Lease Commitments

The Company is obligated under various operating leases for vehicles, office space, furniture and equipment. Leases expire at various dates through 2057. Rent expense totaled approximately $12.3 million in 2014, $14.8 million in 2013 and $14.8 million in 2012. Future minimum rental payments under such leases are as follows:

	Millions of dollars
2015	$ 8
2016	5
2017	2
2018	1
2019	2
Thereafter	20
Total	$ 38

Guarantees

SCANA issues guarantees on behalf of its consolidated subsidiaries to facilitate commercial transactions with third parties. These guarantees are in the form of performance guarantees, primarily for the purchase and transportation of natural gas, standby letters of credit issued by financial institutions and credit support for certain tax-exempt bond issues. SCANA is not required to recognize a liability for such guarantees unless it becomes probable that performance under the guarantees will be required. SCANA believes the likelihood that it would be required to perform or otherwise incur any losses associated with these guarantees is remote; therefore, no liability for these guarantees has been recognized. To the extent that a liability subject to a guarantee has been incurred, the liability is included in the consolidated financial statements. At December 31, 2014, the maximum future payments (undiscounted) that SCANA could be required to make under guarantees totaled approximately $1.7 billion.

Asset Retirement Obligations

The Company recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that results from their acquisition, construction, development and normal operation relate primarily to the Company's regulated utility operations. As of December 31, 2014, the Company has recorded AROs of approximately $201 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $362 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations is as follows:

Millions of dollars	2014	2013
Beginning balance	$ 576	$ 561
Liabilities incurred	3	6
Liabilities settled	(6)	(4)
Accretion expense	26	25
Revisions in estimated cash flows	(36)	(12)
Ending balance	$ 563	$ 576

Revisions in estimated cash flows for 2014 primarily relate to lower estimates for certain environmental clean up obligations at generation facilities.

11. AFFILIATED TRANSACTIONS

The Company received cash distributions from equity-method investees of $7.8 million in 2014, $10.4 million in 2013 and $12.5 million in 2012. The Company made investments in equity-method investees of $5.7 million in 2014, $5.2 million in 2013 and $10.6 million in 2012.

SCE&G owns 40% of Canadys Refined Coal, LLC, which is involved in the manufacturing and selling of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G's receivable from this affiliate was $27.8 million at December 31, 2014 and $18.0 million at December 31, 2013. SCE&G's payable to this affiliate was $27.9 million at December 31, 2014 and $18.0 million at December 31, 2013. SCE&G's total purchases from this affiliate were $260.3 million in 2014 and $134.2 million in 2013. SCE&G's total sales to this affiliate were $259.0 million in 2014 and $133.6 million in 2013.

12. SEGMENT OF BUSINESS INFORMATION

Reportable segments, which are described below, follow the same accounting policies as those described in Note 1. The Company records intersegment sales and transfers of electricity and gas based on rates established by the appropriate regulatory authority. Nonregulated sales and transfers are recorded at current market prices.

Electric Operations primarily generates, transmits and distributes electricity, and is regulated by the SCPSC and FERC.

Gas Distribution, comprised of the local distribution operations of SCE&G and PSNC Energy, purchases and sells natural gas, primarily at retail. SCE&G and PSNC Energy are regulated by the SCPSC and the NCUC, respectively.

Retail Gas Marketing markets natural gas in Georgia and is regulated as a marketer by the GPSC. Energy Marketing markets natural gas to industrial and large commercial customers and municipalities, primarily in the Southeast.

All Other is comprised of the holding company and its other direct and indirect wholly-owned subsidiaries. One of these subsidiaries operates a FERC-regulated interstate pipeline company and the other subsidiaries conduct nonregulated operations in energy-related and telecommunications industries. None of these subsidiaries met the quantitative thresholds for determining reportable segments during any period reported. See Note 13.

Regulated reportable segments share a similar regulatory environment and, in some cases, overlapping service areas. However, Electric Operations' product differs from the other segments, as does its generation process and method of distribution. Marketing segments differ from each other in their respective markets and customer type.

Management uses operating income to measure segment profitability for SCE&G and other regulated operations and evaluates utility plant, net, for segments attributable to SCE&G. As a result, the Company does not allocate interest charges, income tax expense or assets other than utility plant to its segments. For nonregulated operations, management uses net income as the measure of segment profitability and evaluates total assets for financial position. Interest income is not reported by segment and is not material. The Company's deferred tax assets are netted with deferred tax liabilities for reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the energy-related and regulated segments. Revenues from non-reportable and nonregulated segments are included in Other Income. Therefore the adjustments to total operating revenues remove revenues from non-reportable segments. Adjustments to net income consist of the unallocated net income of the Company's regulated reportable segments.

Segment Assets include utility plant, net for SCE&G's Electric Operations and Gas Distribution, and all assets for PSNC Energy and the remaining segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for SCE&G.

Adjustments to Interest Expense, Income Tax Expense, Expenditures for Assets and Deferred Tax Assets include primarily the totals from SCANA or SCE&G that are not allocated to the segments. Interest Expense is also adjusted to eliminate charges between affiliates. Adjustments to Depreciation and Amortization consist of non-reportable segment expenses, which are not included in the depreciation and amortization reported on a consolidated basis. Expenditures for Assets are adjusted for AFC and revisions to estimated cash flows related to asset retirement obligations. Deferred Tax Assets are adjusted to net them against deferred tax liabilities on a consolidated basis.

Disclosure of Reportable Segments (Millions of dollars)

	Electric Operations	Gas Distribution	Retail Gas Marketing	Energy Marketing	All Other	Adjustments/ Eliminations	Consolidated Total
2014							
External Revenue	$ 2,622	$ 1,012	$ 515	$ 786	$ 37	$ (21)	$ 4,951
Intersegment Revenue	7	2	—	196	437	(642)	—

Expenditures for Assets	999	123	—	1	14	(60)	1,077
Deferred Tax Assets	9	26	10	4	17	(55)	11

13. DISPOSITIONS

In December 2014, SCANA entered into definitive agreements to sell CGT and SCI. CGT is an interstate natural gas pipeline regulated by FERC that transports natural gas in South Carolina and southeastern Georgia, and it was sold to Dominion Resources, Inc. SCI provides fiber optic communications and other services and builds, manages and leases communications towers in several southeastern states, and it was sold to Spirit Communications. These sales closed in the first quarter of 2015. Proceeds from these sales, net of transaction costs, were approximately $625 million, and the estimated pre-tax gain on the sales to be recognized during the first quarter of 2015 is approximately $350 million.

CGT and SCI operate principally in wholesale markets, whereas the Company's primary focus is the delivery of energy-related products and services to retail markets. In addition, neither CGT nor SCI meet accounting criteria for disclosure as a reportable segment. Accordingly, segment disclosures related to them are included within All Other in Note 12. As a result, the Company has determined that the sales of CGT and SCI do not represent a strategic shift that will have a major effect on its operations, and therefore, these sales do not meet the criteria for classification as discontinued operations.

The carrying values of the major classes of assets and liabilities classified as held for sale in the consolidated balance sheet as of December 31, 2014, were as follows:

Millions of dollars	CGT	SCI	Total
Assets Held for Sale			
Utility Plant, Net	$ 288.4	—	$ 288.4
Nonutility Property and Investments, Net	0.6	$ 40.1	40.7
Current Assets	6.5	3.9	10.4
Deferred Debits and Other Assets	0.9	0.2	1.1
Total Assets Held for Sale	$ 296.4	$ 44.2	$ 340.6
Liabilities Held for Sale			
Current Liabilities	$ 3.5	$ 2.2	$ 5.7
Deferred Credits and Other Liabilities	42.9	3.1	46.0
Total Liabilities Held for Sale	$ 46.4	$ 5.3	$ 51.7

14. QUARTERLY FINANCIAL DATA (UNAUDITED)

Millions of dollars, except per share amounts	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Annual
2014					
Total operating revenues	$ 1,590	$ 1,026	$ 1,121	$ 1,214	$ 4,951

Diluted earnings per share	1.11	.60	.94	.73	3.39

SOUTH CAROLINA ELECTRIC & GAS COMPANY

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

SCE&G is a regulated public utility engaged in the generation, transmission, distribution and sale of electricity and in the purchase and sale, primarily at retail, and transportation of natural gas. SCE&G's business is subject to seasonal fluctuations. Generally, sales of electricity are higher during the summer and winter months because of air-conditioning and heating requirements, and sales of natural gas are greater in the winter months due to heating requirements. SCE&G's electric service territory extends into 24 counties covering nearly 17,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 36 counties in South Carolina and covers approximately 23,000 square miles.

Key Earnings Drivers and Outlook

During 2014, economic growth continued to improve in the southeast. Significant industrial announcements in SCE&G's service territory were made during the year, and announcements made in previous years began to materialize. In addition, the Port of Charleston continues to see increased traffic, with container volume up 12% over 2013. SCE&G also experienced positive residential and commercial customer growth rates and steady unemployment rates for areas it serves.

Over the next five years, key earnings drivers for SCE&G will be additions to utility rate base, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage and the level of growth of operation and maintenance expenses and taxes.

Electric Operations

SCE&G's electric operations primarily generates electricity and provides for its transmission, distribution and sale to approximately 688,000 customers (as of December 31, 2014) in portions of South Carolina in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control growth in costs. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electric prices and, therefore, the competitive position of electricity against other energy sources.

Embedded in the rates charged to customers is an allowed regulatory return on equity. SCE&G's allowed return on equity in 2014 was 10.25% for non-BLRA rate base, and 11.0% for BLRA-related rate base. To prevent the need for a non-BLRA base rate increase during years of peak nuclear construction, SCE&G has a stated goal of earning a return on equity of 9% or higher. For the year ended December 31, 2014, SCE&G's earned return on equity related to non-BLRA rate base was approximately 10%.

<u>New Nuclear Construction</u>

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of two 1,250 MW (1,117 MW, net) nuclear generation units, which SCE&G will jointly own with Santee Cooper. SCE&G's current ownership share in the New Units is 55%, and under an agreement signed in January 2014, SCE&G has agreed to acquire an additional 5% ownership in increments coinciding with the commercial operation date of Unit 2 and the first and second anniversaries thereof. The purchase of this additional 5% ownership is expected to be funded by increased cash flows resulting from tax deductibility of depreciation associated with the commercial operation of the New Units.

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. As of December 31, 2014, SCE&G's investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018, with an approved 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in 2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

For additional information on these and other matters, see New Nuclear Construction Matters herein and Note 2 and Note 10 to the consolidated financial statements.

Environmental

EPA regulations have a significant impact on Consolidated SCE&G's electric operations. In 2014, several regulations were proposed or became final, including the following:

- A revised carbon standard for new power plants was proposed on January 8, 2014, which requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. This rule effectively prevents construction of new coal-fired plants without carbon capture and sequestration capabilities.

- The Clean Power Plan released on June 2, 2014 would regulate carbon dioxide emissions from existing units. This proposed rule includes state-specific goals for carbon dioxide emissions, as well as guidelines for states to follow in developing SIPs to achieve those goals. Though it may be revised before becoming final in June 2015, the proposal gives states from one to three years from the date of any final rule to issue SIPs. The SIPs will ultimately define the specific compliance methodology that will be applied to existing units in that state.

- The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved in connection with the renewal (every five years) of state-issued NPDES permits. The ELG Rule is expected to be finalized by September 30, 2015.

- A final rule became effective October 14, 2014 that modifies requirements for existing cooling water intake structures. Consolidated SCE&G is conducting studies and is developing or implementing compliance plans for this rule. Congress is also expected to consider further amendments to the CWA, and such legislation may include toxicity-based standards, among other things.

- On November 26, 2014 the EPA announced a proposed tightening of current NAAQS ozone standards from .075 ppm to a range between .065 and .070 ppm, and that it will take comments on a standard as low as .060 ppm. A final rule is expected in October 2015.

- New federal regulations affecting the management and disposal of CCRs were issued on December 19, 2014 and are expected to take effect in 2015. Under these regulations, CCRs will not be regulated as hazardous waste. These regulations do impose certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The above environmental initiatives and similar issues are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. Unless otherwise noted, Consolidated SCE&G cannot predict when regulatory rules or legislative requirements for any of these initiatives will become final, if at all, or what conditions they may impose on Consolidated SCE&G, if any. Consolidated SCE&G believes that any additional costs imposed by such regulations would be recoverable through rates.

Gas Distribution

The local distribution operations of SCE&G purchases, transports and sells natural gas to approximately 338,000 retail customers (as of December 31, 2014) in portions of South Carolina. Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control growth in costs. Embedded in the rates charged to customers is an allowed regulatory return on equity of 10.25%.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact SCE&G’s ability to retain large commercial and industrial customers. In addition, the production of shale gas in the United States continues to keep prices for this commodity at historic lows, and such prices are expected to continue at such levels for the foreseeable future.

RESULTS OF OPERATIONS

Net Income

Net income for Consolidated SCE&G was as follows:

Millions of dollars	2014	Change	2013	Change	2012
Net income	$ 457.7	17.1%	$ 390.8	11.0%	$ 352.0

2014 vs 2013	Net income increased primarily due to the effects of weather, customer growth and base rate increases under the BLRA. Higher electric and gas margins were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense, further described below.
2013 vs 2012	Net income increased due to higher electric and gas margins. These margin increases were partially offset by higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense, further described below.

Dividends Declared

Consolidated SCE&G's Boards of Directors declared the following dividends on common stock (all of which was held by SCANA):

Declaration Date	Dividend Amount	Quarter Ended	Payment Date
February 19, 2015	$70.7 million	March 31, 2015	April 1, 2015
February 20, 2014	$64.3 million	March 31, 2014	April 1, 2014
April 24, 2014	$64.4 million	June 30, 2014	July 1, 2014
July 31, 2014	$68.5 million	September 30, 2014	October 1, 2014
October 30, 2014	$74.4 million	December 31, 2014	January 1, 2015
February 20, 2013	$64.0 million	March 31, 2013	April 1, 2013
April 25, 2013	$63.8 million	June 30, 2013	July 1, 2013
July 31, 2013	$67.5 million	September 30, 2013	October 1, 2013
October 31, 2013	$61.7 million	December 31, 2013	January 1, 2014

When a dividend payment date falls on a weekend or holiday, the payment is made the following business day.

Electric Operations

Electric Operations is comprised of the electric operations of SCE&G, GENCO and Fuel Company. Electric operations sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 2,629.4	8.2%	$ 2,430.5	(0.9)%	$ 2,453.1
Less: Fuel used in electric generation	799.3	6.4%	751.0	(11.0)%	844.2
Purchased power	80.7	87.7%	43.0	53.0 %	28.1
Margin	$ 1,749.4	6.9%	$ 1,636.5	3.5 %	$ 1,580.8

2014 vs 2013	Electric margin increased due to the effects of weather of $43.5 million, base rate increases under the BLRA of $54.1 million and customer growth of $14.7 million. These margin increases were partially offset by $69.0 million of downward adjustments to electric revenues in 2014 pursuant to SCPSC orders related to fuel cost recovery and SCE&G's DSM Programs. In 2013, pursuant to SCPSC orders, electric revenues were adjusted downward by $50.1 million related to fuel cost recovery and the reversal of undercollected amounts related to SCE&G's pilot eWNA program (eWNA was discontinued effective with the first billing cycle of 2014). Such adjustments are fully offset by the recognition within other income of gains realized upon the late 2013 settlement of certain derivative interest rate contracts and the application, as a reduction to operation and maintenance expenses, of a portion of SCE&G's storm damage reserve, both of which had been deferred in regulatory accounts. See Note 2 to the consolidated financial statements.
2013 vs 2012	Margin increased primarily due to base rate increases under the BLRA of $54.2 million and higher electric base rates of $67.3 million approved in the December 2012 rate order. Additionally, pursuant to accounting orders of the SCPSC, 2013's electric margin reflects downward adjustments of $50.1 million to revenue. Such adjustments are fully offset by the recognition within other income of gains realized upon the settlement of certain derivative interest rate contracts, which had been deferred as regulatory liabilities. See Note 2 to the consolidated financial statements.

Sales volumes (in GWh) related to the electric margin above, by class, were as follows:

Classification	2014	Change	2013	Change	2012
Residential	8,156	7.7%	7,571	—	7,571
Commercial	7,371	2.3%	7,205	(1.2)%	7,291
Industrial	6,234	3.9%	6,000	2.8 %	5,836
Other	600	3.3%	581	(0.9)%	586
Total retail sales	22,361	4.7%	21,357	0.3 %	21,284
Wholesale	958	0.3%	955	(63.2)%	2,595
Total	23,319	4.5%	22,312	(6.6)%	23,879

2014 vs 2013	Retail sales volumes increased primarily due to the effects of weather and customer growth.
2013 vs 2012	Retail sales volume increased primarily due to customer growth and the effects of weather, partially offset by lower average use. The decrease in wholesale sales is primarily due to the expiration of two customer contracts.

Gas Distribution

Gas Distribution is comprised of the local distribution operations of SCE&G. Gas distribution sales margin (including transactions with affiliates) was as follows:

Millions of dollars	2014	Change	2013	Change	2012
Operating revenues	$ 462.2	11.5%	$ 414.4	16.5%	$ 355.6
Less: Gas purchased for resale	283.1	16.0%	244.1	24.2%	196.6
Margin	$ 179.1	5.2%	$ 170.3	7.1%	$ 159.0

2014 vs 2013	Margin increased primarily due to weather, residential and commercial customer growth of $4.0 million and increased average usage of $2.5 million.
2013 vs 2012	Margin increased primarily due to the SCPSC-approved increase in base rates under the RSA which became effective with the first billing cycle of November 2012, as well as residential and commercial customer growth.

Sales volumes (in MMBTU) by class, including transportation gas, were as follows:

Classification (in thousands)	2014	Change	2013	Change	2012
Residential	14,917	19.2 %	12,515	23.3%	10,153
Commercial	13,936	9.0 %	12,786	9.1%	11,723
Industrial	18,307	(10.3)%	20,411	5.5%	19,341
Transportation gas	4,286	(10.7)%	4,801	2.0%	4,707
Total	51,446	1.8 %	50,513	10.0%	45,924

2014 vs 2013 Residential and commercial sales volumes increased primarily due to the effects of weather and customer growth. Industrial sales volumes decreased due to weather related curtailments and a customer switching to an alternative fuel source. Transportation sales volumes decreased due to weather related curtailments.

2013 vs 2012 Total sales volumes increased primarily due to customer growth, increased industrial usage and the effects of weather.

Other Operating Expenses

Other operating expenses were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Other operation and maintenance	$ 575.2	3.4%	$ 556.5	2.8%	$ 541.6
Depreciation and amortization	315.2	0.6%	313.4	6.8%	293.4
Other taxes	207.9	3.8%	200.2	6.3%	188.3

2014 vs 2013 Other operation and maintenance expenses increased primarily due to higher electric operating expenses of $8.9 million, DSM Programs cost amortization of $2.1 million, higher labor expense of $2.4 million which includes incentive compensation and lower pension costs, storm expenses of $1.1 million, and other general expenses of $1.9 million. Depreciation and amortization expense increased due to net plant additions. Other taxes increased primarily due to higher property taxes.

2013 vs 2012 Other operation and maintenance expenses increased by $16.7 million due to incremental expenses associated with the December 2012 SCPSC rate order and by $5.7 million due to higher electric generation, transmission and distribution expenses. These increases were partially offset by lower compensation costs of $10.1 million due to reduced headcount and lower incentive compensation accruals and by other general expenses. Depreciation and amortization expense increased $13.2 million due to the recognition of depreciation expense associated with the Wateree Station scrubber which was provided for in the December 2012 SCPSC rate order and due to other net plant additions. Other taxes increased primarily due to higher property taxes on net property additions.

Net Periodic Benefit Cost

Net periodic benefit cost was recorded on Consolidated SCE&G's income statements and balance sheets as follows:

Millions of dollars	2014	Change	2013	Change	2012
Income Statement Impact:					
Employee benefit costs	$ 4.0	(63.6)%	$ 11.0	100.0 %	—
Other expense	0.1	(83.3)%	0.6	50.0 %	$ 0.4
Balance Sheet Impact:					
Increase in capital expenditures	0.3	(95.3)%	6.4	12.3 %	5.7
Component of amount receivable from Summer Station co-owner	0.1	(96.0)%	2.5	13.6 %	2.2
Increase (decrease) in regulatory asset	(3.2)	*	5.5	(63.3)%	15.0
Net periodic benefit cost	$ 1.3	(96.0)%	$ 26.0	11.6 %	$ 23.3

* Greater than 100%

In 2013, pursuant to regulatory orders, SCE&G began recovering current pension expense through a rate rider (for retail electric operations) and through cost of service rates (for gas operations), and began amortizing pension costs previously deferred in regulatory assets over approximately 30 years (for retail electric operations) and approximately 14 years (for gas operations). See further discussion in Note 2 and Note 8 to the consolidated financial statements. Amounts amortized were as follow:

Millions of dollars	2014	2013
Retail electric operations	$ 2.0	$ 2.0
Gas operations	1.0	0.2

Other Income (Expense)

Other income (expense) includes the results of certain incidental non-utility activities and AFC. Components of other income (expense), were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Other income	$ 79.8	51.4%	$ 52.7	*	$ 0.4
Other expense	(33.8)	93.1%	(17.5)	(2.2)%	(17.9)
Total	$ 46.0	30.7%	$ 35.2	*	$ (17.5)

* Greater than 100%

2014 vs 2013 — Other income (expense) increased primarily due to the recognition of $64.0 million of gains realized upon the late 2013 settlement of certain interest rate derivative contracts previously recorded as regulatory liabilities pursuant to SCPSC orders previously discussed, compared to $50.1 million of such gains in 2013. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income. Donations increased $4.6 million, equity partnership losses increased $2.3 million and AFC increased $2.6 million.

2013 vs 2012 — Total other income (expense) increased primarily due to the recognition, pursuant to SCPSC accounting orders, of $50.1 million of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as regulatory liabilities. Such gain recognition was fully offset by downward adjustments to revenues reflected within electric margin and had no effect on net income.

AFC

AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. Consolidated SCE&G includes an equity portion of AFC in nonoperating income and a debt portion of AFC in interest charges (credits) as noncash items, both of which have the effect of increasing reported net income. AFC represented approximately 6.2% of income before income taxes in 2014, 6.6% in 2013 and 6.3% in 2012, respectively.

Interest Expense

Components of interest expense, net of the debt component of AFC, were as follows:

Millions of dollars	2014	Change	2013	Change	2012
Interest on long-term debt, net	$ 217.6	5.2 %	$ 206.8	3.0%	$ 200.7
Other interest expense	10.4	(1.0)%	10.5	7.1%	9.8
Total	$ 228.0	4.9 %	$ 217.3	3.2%	$ 210.5

Interest on long-term debt increased in each year primarily due to increased long-term borrowings.

Income Taxes

Income tax expense increased in 2014 over 2013 and in 2013 over 2012 primarily due to increases in income before taxes. Consolidated SCE&G's effective tax rate has been favorably impacted by equity AFC and certain tax credits.

LIQUIDITY AND CAPITAL RESOURCES

Consolidated SCE&G anticipates that its contractual cash obligations will be met through internally generated funds and additional short- and long-term borrowings. Consolidated SCE&G expects that, barring a future impairment of the capital markets, it has or can obtain adequate sources of financing to meet its projected cash requirements for the foreseeable future, including the cash requirements for nuclear construction and refinancing maturing long-term debt.

Consolidated SCE&G's cash requirements arise primarily from its operational needs, funding its construction programs and payment of dividends to SCANA. The ability of Consolidated SCE&G to replace existing plant investment, to expand to meet future demand for electricity and gas and to install equipment necessary to comply with environmental
regulations, will depend upon its ability to attract the necessary financial capital on reasonable terms. Consolidated SCE&G recovers the costs of providing services through rates charged to customers. Rates for regulated services are generally based on historical costs. As customer growth and inflation occur and Consolidated SCE&G continues its ongoing construction program, Consolidated SCE&G expects to seek increases in rates. Consolidated SCE&G's future financial position and results of operations will be affected by Consolidated SCE&G's ability to obtain adequate and timely rate and other regulatory relief.

Cash outlays for property additions and construction expenditures, including nuclear fuel, net of AFC were $934 million in 2014. Consolidated SCE&G's current estimates of its capital expenditures for construction and nuclear fuel for the next three years, which are subject to continuing review and adjustment, are as follows:

Estimated Capital Expenditures

Millions of dollars	2015	2016	2017
Consolidated SCE&G - Normal			
Generation	$ 158	$ 123	$ 143
Transmission & Distribution	272	251	217
Other	37	41	27
Gas	54	64	57
Common	9	12	9
Total Consolidated SCE&G - Normal	530	491	453
New Nuclear (including transmission)	957	928	708
Cash Requirements for Construction	1,487	1,419	1,161
Nuclear Fuel	22	145	104
Total Estimated Capital Expenditures	$ 1,509	$ 1,564	$ 1,265

Estimated capital expenditures for Nuclear Fuel in 2016 include approximately $53 million, which is SCE&G's share of nuclear fuel it acquired in 2013. This fuel has been recorded in utility plant and the corresponding liability has been recorded in long-term debt on the consolidated balance sheet.

Consolidated SCE&G's contractual cash obligations as of December 31, 2014 are summarized as follows:

Contractual Cash Obligations	Payments due by period				
Millions of dollars	Total	Less than 1 year	1 - 3 years	4 - 5 years	More than 5 years
Long-term and short-term debt including interest	$ 9,611	$ 941	$ 1,492	$ 374	$ 6,804
Capital leases	14	3	7	3	1
Operating leases	29	6	4	1	18
Purchase obligations	3,285	2,149	1,136	—	—
Other commercial commitments	2,541	480	922	555	584
Total	$ 15,480	$ 3,579	$ 3,561	$ 933	$ 7,407

Included in the table above in purchase obligations is SCE&G's portion of a contractual agreement for the design and construction of the New Units at Summer Station. SCE&G expects to be a joint owner and share operating costs and generation output of the New Units, with SCE&G currently responsible for 55 percent of the cost and receiving 55 percent of the output. The estimated $500 million SCE&G expects it will cost to acquire an additional 5% ownership in the New Units is included in other commercial commitments and is further described in New Nuclear Construction Matters.

Purchase obligations includes customary purchase orders under which SCE&G has the option to utilize certain vendors without the obligation to do so. SCE&G may terminate such arrangements without penalty.

Other commercial commitments includes estimated obligations for coal and nuclear fuel purchases. SCE&G also has a legal obligation associated with the decommissioning and dismantling of Summer Station Unit 1 and other conditional asset retirement obligations that are not listed in the contractual cash obligations above. See Notes 1 and 10 to the consolidated financial statements.

At December 31, 2014, Consolidated SCE&G had posted $107 million in cash collateral for interest rate derivative contracts.

Financing Limits and Related Matters

Consolidated SCE&G’s issuance of various securities, including long-term and short-term debt, is subject to customary approval or authorization by regulatory bodies including the SCPSC and FERC. Financing programs currently utilized by Consolidated SCE&G follow.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2016.

In October 2014, the Consolidated SCE&G's existing five-year committed LOCs were extended by one year. At December 31, 2014 SCE&G and Fuel Company were parties to five-year credit agreements in the amounts of $1.2 billion, (of which $500 million relates to Fuel Company) which expire in October 2019. In addition, at December 31, 2014 SCE&G was party to a three-year credit agreement in the amount of $200 million which expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. For a list of banks providing credit support and other information, see Note 4 to the consolidated financial statements.

As of December 31, 2014, Consolidated SCE&G had no outstanding borrowings under its $1.4 billion facilities, had approximately $709 million in commercial paper borrowings outstanding, was obligated under $.3 million in LOC-supported letters of credit, and had approximately $100 million in cash and temporary investments. Consolidated SCE&G regularly monitors the commercial paper and short-term credit markets to optimize the timing for repayment of the outstanding balance
on its draws, while maintaining appropriate levels of liquidity. Average short-term borrowings outstanding during 2014 were approximately $404 million. Short-term cash needs were met primarily through the issuance of commercial paper.

At December 31, 2014, Consolidated SCE&G’s long-term debt portfolio has a weighted average maturity of approximately 21 years and bears an average cost of 5.7%. Substantially all of Consolidated SCE&G's long-term debt bears fixed interest rates or is swapped to fixed. To further preserve liquidity, Consolidated SCE&G rigorously reviews its projected capital expenditures and operating costs and adjusts them where possible without impacting safety, reliability, and core customer service.

SCE&G’s Restated Articles of Incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G’s bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock, all of which is beneficially owned by SCANA.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2014, approximately $67.7 million of retained earnings were restricted by this requirement as to payment of cash dividends on SCE&G’s common stock.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12

consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2014, the Bond Ratio was 5.41.

Financing Activities

During 2014, net cash inflows related to financing activities totaled approximately $582 million, primarily associated with the issuance of short and long-term debt and contributions from parent, partially offset by repayment of long-term debt and payment of dividends. For a description of specific financing activities, see Notes 3 and 4 to the consolidated financial statements.

In May 2014, SCE&G issued $300 million of 4.5% first mortgage bonds due June 1, 2064. Proceeds from this sale were used to repay short-term debt primarily incurred as a result of SCE&G's construction program, to finance capital expenditures, and for general corporate purposes.

Investing Activities

During 2014, SCE&G paid approximately $95 million to settle interest rate derivative contracts.

Consolidated SCE&G paid approximately $6 million, net, through the third quarter of 2013 to settle interest rate derivative contracts upon the issuance of long-term debt. In addition, during the fourth quarter of 2013, Consolidated SCE&G received approximately $120 million upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt.

For additional information, see Note 4 to the consolidated financial statements.

Major tax incentives included within recent federal legislation resulted in the allowance of 50% bonus depreciation for property placed in service for 2012 and 2013. These incentives, along with certain other deductions, have had a positive impact on the cash flows of Consolidated SCE&G. Similar tax incentives for property placed in service for 2014 were implemented after estimated tax payments for the 2014 tax year had been made. As a result, these excess payments are expected to have a positive impact on the cash flows of Consolidated SCE&G in 2015.

Ratios of earnings to fixed charges for each of the five years ended December 31, 2014, were as follows:

December 31,	**2014**	**2013**	**2012**	**2011**	**2010**
SCE&G	3.77	3.48	3.29	3.13	3.18

ENVIRONMENTAL MATTERS

Consolidated SCE&G's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on Consolidated SCE&G's financial condition, results of operations and cash flows. In addition, Consolidated SCE&G often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, Consolidated SCE&G expects to recover such expenditures and costs through existing ratemaking provisions.

For the three years ended December 31, 2014, Consolidated SCE&G's capital expenditures for environmental control equipment at its fossil fuel generating stations totaled $51.8 million. During this same period, Consolidated SCE&G expended approximately $31.5 million for the construction and retirement of landfills and ash ponds, net of disposal proceeds. In addition, Consolidated SCE&G made expenditures to operate and maintain environmental control equipment at its fossil plants of $9.1 million in 2014, $9.2 million in 2013 and $10.2 million in 2012, which are included in "Other operation and maintenance" expense, and made expenditures to handle waste ash, net of disposal proceeds, of $1.6 million in 2014, $3.2 million in 2013 and $7.9 million in 2012, which are included in "Fuel used in electric generation." In addition, included within "Other operation and maintenance" expense is an annual amortization of $1.4 million in each of 2014, 2013 and 2012 related to SCE&G's recovery of MGP remediation costs as approved by the SCPSC. It is not possible to estimate all future costs related to environmental matters, but forecasts for capitalized environmental expenditures for Consolidated SCE&G are $31.9 million for 2015 and $68.6 million for the four-year period 2016-2019. These expenditures are included in Consolidated SCE&G's Estimated Capital Expenditures table, are discussed in Liquidity and Capital Resources, and include known costs related to the matters discussed below.

The EPA is conducting an enforcement initiative against the utilities industry related to the NSR provisions and the NSPS of the CAA. As part of the initiative, many utilities have received requests for information under Section 114 of the CAA. In addition, the DOJ, on behalf of the EPA, has taken civil enforcement action against several utilities. The primary basis for these actions is the assertion by the EPA that maintenance activities undertaken by the utilities at their coal-fired power plants constituted “major modifications” which required the installation of costly BACT. Some of the utilities subject to the actions have reached settlement. Though Consolidated SCE&G cannot predict what action, if any, the EPA will initiate against it, any costs incurred are expected to be recoverable through rates.

With the pervasive emergence of concern over the issue of global climate change as a significant influence upon the economy, SCE&G and GENCO are subject to climate-related financial risks, including those involving regulatory requirements responsive to GHG emissions, as well as those involving other potential physical impacts. Other business and financial risks arising from such climate change could also materialize. Consolidated SCE&G cannot predict all of the climate-related regulatory and physical risks nor the related consequences which might impact Consolidated SCE&G, and the following discussion should not be considered all-inclusive.

Physical effects associated with climate changes could include the impact of possible changes in weather patterns, such as storm frequency and intensity, and the resultant potential damage to Consolidated SCE&G's electric system, as well as impacts on employees and customers and on its supply chain and many others. Much of the service territory of SCE&G is subject to the damaging effects of Atlantic and Gulf coast hurricanes and also to the damaging impact of winter ice storms. To help mitigate the financial risks arising from these potential occurrences, SCE&G maintains insurance on certain properties. As part of its ongoing operations, SCE&G maintains emergency response and storm preparation plans and teams who receive ongoing training and related simulations in advance of such storms, all in order to allow Consolidated SCE&G to protect its assets and to return its systems to normal reliable operation in a timely fashion following any such event.

Environmental commitments and contingencies are further described in Note 10 to the consolidated financial statements.

REGULATORY MATTERS

SCE&G, GENCO and Fuel Company are subject to the regulatory jurisdiction of the following entities for the matters noted.

Company	Regulatory Jurisdiction/Matters
SCE&G, GENCO and Fuel Company	The CFTC to the extent they transact swaps as defined in Dodd-Frank.
SCE&G	The SEC as to the issuance of certain securities and other matters; the SCPSC as to retail electric and gas rates, service, accounting, issuance of securities (other than short-term borrowings) and other matters; the FERC as to issuance of short-term borrowings, guarantees of short-term indebtedness, certain acquisitions and other matters; the PHMSA as to integrity management requirements for gas distribution pipeline systems; and the NRC with respect to the ownership, construction, operation and decommissioning of its currently operated and planned nuclear generating facilities. NRC jurisdiction encompasses broad supervisory and regulatory powers over the construction and operation of nuclear reactors, including matters of health and safety and environmental impact. In addition, the Federal Emergency Management Agency reviews, in conjunction with the NRC, certain aspects of emergency planning relating to the operation of nuclear plants.
SCE&G and GENCO	The FERC and DOE, under the Federal Power Act, as to the transmission of electric energy in interstate commerce, the sale of electric energy at wholesale for resale, the licensing of hydroelectric projects and certain other matters, including accounting.
GENCO	The SCPSC as to the issuance of securities (other than short-term borrowings) and the FERC as to the issuance of short-term borrowings, accounting, certain acquisitions and other matters.
Fuel Company	The SEC as to the issuance of certain securities.

Material retail rate proceedings are described in Note 2 to the consolidated financial statements. In addition, the RSA allows natural gas distribution companies in South Carolina to request annual adjustments to rates to reflect changes in revenues and expenses and changes in investment. Such annual adjustments are subject to certain qualifying criteria and review by the SCPSC.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Following are descriptions of Consolidated SCE&G's accounting policies and estimates which are most critical in terms of reporting financial condition or results of operations.

Utility Regulation

Consolidated SCE&G's regulated operations record certain assets and liabilities that defer the recognition of expenses and revenues to future periods in accordance with accounting guidance for rate-regulated utilities. In the future, in the event of deregulation or other changes in the regulatory environment, Consolidated SCE&G may no longer meet the criteria of accounting for rate-regulated utilities, and could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on the results of operations, liquidity or financial position of Consolidated SCE&G's Electric Operations and Gas Distribution segments in the period the write-off would be recorded. See Note 2 to the consolidated financial statements for a description of Consolidated SCE&G's regulatory assets and liabilities.

Consolidated SCE&G's generation assets would be exposed to considerable financial risks in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, Consolidated SCE&G could be required to write down its investment in those assets. Consolidated SCE&G cannot predict whether any write-downs would be necessary and, if they were, the extent to which they would affect Consolidated SCE&G's results of operations in the period in which they would be recorded. As of December 31, 2014, Consolidated SCE&G's net investments in fossil/hydro and nuclear generation assets were $2.3 billion and $3.4 billion, respectively.

Revenue Recognition and Unbilled Revenues

Revenues related to the sale of energy are recorded when service is rendered or when energy is delivered to customers. Because customers are billed on cycles which vary based on the timing of the actual reading of their electric and gas meters, SCE&G records estimates for unbilled revenues at the end of each reporting period. Such unbilled revenue amounts reflect estimates of the amount of energy delivered to customers for which they have not yet been billed. Such unbilled revenues reflect consideration of estimated usage by customer class, the effects of different rate schedules and, where applicable, the impact of weather normalization provisions of rate structures. The accrual of unbilled revenues in this manner properly matches revenues and related costs. As of December 31, 2014 and 2013, accounts receivable included unbilled revenues of $115.8 million and $111.9 million, respectively, compared to total revenues of $3.1 billion and $2.8 billion for the years 2014 and 2013, respectively.

Nuclear Decommissioning

Accounting for decommissioning costs for nuclear power plants involves significant estimates related to costs to be incurred many years into the future. Among the factors that could change SCE&G's accounting estimates related to decommissioning costs are changes in technology, changes in regulatory and environmental remediation requirements, and changes in financial assumptions such as discount rates and timing of cash flows. Changes in any of these estimates could significantly impact SCE&G's financial position and cash flows (although changes in such estimates should be earnings-neutral, because these costs are expected to be collected from ratepayers).

Based on a decommissioning cost study, SCE&G's two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including both the cost of decommissioning plant components that are and are not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that upon closure the site would be maintained for 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates are invested in insurance policies on the lives of certain Company personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1on an after-tax basis.

Asset Retirement Obligations

Consolidated SCE&G accrues for the legal obligation associated with the retirement of long-lived tangible assets that result from the acquisition, construction, development and normal operation in accordance with applicable accounting guidance. Consolidated SCE&G recognizes obligations at present value in the period in which they are incurred, and capitalizes associated asset retirement costs as part of the carrying amount of the related long-lived assets. Because such obligations relate primarily to Consolidated SCE&G's utility operations, their recognition has no significant impact on results of operations. As of December 31, 2014, Consolidated SCE&G has recorded AROs of $201 million for nuclear plant decommissioning (as discussed above) and AROs of $335 million for other conditional obligations related to generation, transmission and distribution properties, including gas pipelines. All of the amounts are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments may be made many years in the future. Changes in these estimates will be recorded over time; however, these changes in estimates are not expected to materially impact results of operations so long as the regulatory framework for utilities remains in place.

Accounting for Pensions and Other Postretirement Benefits

SCE&G participates in SCANA's noncontributory defined benefit pension plan, which covers substantially all regular, full-time employees. SCANA recognizes the funded status of its defined benefit pension plan as an asset or liability and changes in funded status as a component of net periodic benefit cost or other comprehensive income, net of tax, or as a regulatory asset as required by accounting guidance. Accounting guidance requires the use of several assumptions that impact pension cost, of which the discount rate and the expected return on assets are the most sensitive. SCANA's net pension cost of $2.6 million ($1.3 million attributable to SCE&G) recorded in 2014 reflects the use of a 5.03% discount rate derived using a cash flow matching technique, and an assumed 8.00% long-term rate of return on plan assets. SCANA believes that these assumptions were, and that the resulting pension cost amount was, reasonable. For purposes of comparison, a 25 basis point reduction in the discount rate in 2014 would have increased SCANA's pension cost by $1.6 million and increased SCANA's pension obligation by $0.8 million. Further, had the assumed long-term rate of return on assets been 7.75%, SCANA's pension cost for 2014 would have increased by $2.1 million.

The following information with respect to pension assets (and returns thereon) should also be noted.

SCANA determines the fair value of a large majority of its pension assets utilizing market quotes or derives them from modeling techniques that incorporate market data. Less than 10% of assets are valued using less transparent Level 3 methods.

In developing the expected long-term rate of return assumptions, SCANA evaluates historical performance, targeted allocation amounts and expected payment terms. As of the beginning of 2014, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.4%, 6.0%, 8.3% and 9.3%, respectively. The 2014 expected long-term rate of return of 8.00% was based on a target asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. SCANA regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. As of the beginning of 2015, the plan's historical 10, 15, 20 and 25 year cumulative performance showed actual returns of 6.0%, 5.4%, 8.7% and 8.8%, respectively. For 2015, the expected rate of return is 7.50%.

Pursuant to regulatory orders, certain previously deferred pension costs are being amortized as described in Note 2 to the consolidated financial statements. Current pension expense for electric operations is being recovered through a pension cost rider, and current pension expense related to SCE&G's gas operations is being recovered through cost of service rates.

Pension benefits are not offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. As a result, the significance of pension costs and the criticality of the related estimates to SCE&G's financial statements will continue to diminish. Further, the pension trust is adequately funded under current regulations, and management does not anticipate the need to make significant pension contributions for the foreseeable future.

In October 2014 the Society of Actuaries' Retirement Plans Experience Committee published a new RP-2014 mortality table and the related MP-2014 mortality improvement scale, which SCANA adopted effective December 31, 2014. The improvements in life expectancy and the projected rate of continued improvement increased postretirement benefit obligations measured at December 31, 2014, and the net periodic benefit cost to be recognized in 2015. Had SCANA not adopted this new mortality table and mortality improvement scale, SCE&G's net periodic benefit cost to be recognized in 2015 would have been approximately $3.0 million and $0.2 million lower for pension and other postretirement benefit plans, respectively, and the benefit obligations would have been approximately $22.1 million and $2.1 million lower for pension and other postretirement benefit plans, respectively.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. SCANA accounts for the cost of the postretirement medical and life insurance benefit plan in a similar manner to that used for its defined benefit pension plan. This plan is unfunded, so no assumptions related to rate of return on assets impact the net expense recorded; however, the selection of discount rates can significantly impact the actuarial determination of net expense. SCANA used a discount rate of 5.19%, derived using a cash flow matching technique, and recorded a net cost to SCE&G of $13.3 million for 2014. Had the selected discount rate been 4.94% (25 basis points lower than the discount rate referenced above), the expense for 2014 would have been $0.4 million higher and the obligation would have been $0.2 million. Because the plan provisions include "caps" on company per capita costs, and because employees hired after December 31, 2010 are responsible for the full cost of retiree medical benefits elected by them, healthcare cost inflation rate assumptions do not materially impact the net expense recorded.

NEW NUCLEAR CONSTRUCTION MATTERS

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station.

SCE&G's current ownership share in the New Units is 55%. As discussed below, under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G's weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2014, SCE&G's investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule, including 146 milestones within that schedule, and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018. The SCPSC also approved an 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules have been and remain focus areas of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01, as well as shield building modules, are considered critical path items for both New Units. CA20 was placed on the nuclear island of Unit 2 in May 2014. The delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of Unit 2 during the first half of 2015.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in 2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes (including any ultimate disagreements involving the preliminary cost estimates provided by the Consortium in the third quarter of 2014) through both the informal and formal procedures and anticipates that any costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the current milestone schedule and capital costs schedule approved by the SCPSC in November 2012, SCE&G's estimated cost would be approximately $500 million for the additional 5% interest being acquired from Santee Cooper. This cost figure could be higher in light of the delays and related costs discussed above.

Nuclear Production Tax Credits

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. SCE&G fulfilled the request related to emergency plant staffing in 2012. In addition, SCE&G prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

OTHER MATTERS

Financial Regulatory Reform

Dodd-Frank provides for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and requires numerous rule-makings by the CFTC and the SEC to implement. Consolidated SCE&G has determined that it meets the end-user exception in Dodd-Frank, with the lowest level of required regulatory reporting burden imposed by this law. Consolidated SCE&G is currently complying with these enacted regulations and intends to comply with regulations enacted in the future, but cannot predict when the final regulations will be issued or what requirements they will impose.

Off-Balance Sheet Arrangements

Consolidated SCE&G holds insignificant investments in securities and businesses ventures. Consolidated SCE&G does not engage in significant off-balance sheet financing or similar transactions, although it is party to incidental operating leases in the normal course of business, generally for office space, furniture, vehicles, equipment and rail cars.

Claims and Litigation

For a description of claims and litigation see Note 10 to the consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

All financial instruments described in this section are held for purposes other than trading.

The tables below provide information about long-term debt issued by Consolidated SCE&G which is sensitive to changes in interest rates. For debt obligations, the tables present principal cash flows and related weighted average interest rates by expected maturity dates. For interest rate swaps, the figures shown reflect notional amounts, weighted average rates and related maturities. Fair values for debt represent quoted market prices. Interest rate swap agreements are valued using discounted cash flow models with independently sourced data.

December 31, 2014 Millions of dollars	Expected Maturity Date 2015	2016	2017	2018	2019	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	9.9	109.4	9.0	718.6	8.1	3,379.7	4,234.8	4,999.8
Average Fixed Interest Rate (%)	4.54	1.11	4.73	5.95	4.97	5.29	5.29	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	65.2
Average Variable Interest Rate (%)	—	—	—	—	—	0.04	0.04	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	950.0	100.0	—	—	—	67.8	1,117.8	(233.0)
Average Pay Interest Rate (%)	3.83	3.63	—	—	—	3.28	3.78	—
Average Receive Interest Rate (%)	0.26	0.26	—	—	—	0.04	0.24	—

December 31, 2013 Millions of dollars	Expected Maturity Date 2014	2015	2016	2017	2018	Thereafter	Total	Fair Value
Long-Term Debt:								
Fixed Rate ($)	45.2	9.2	108.6	8.2	717.9	3,086.5	3,975.6	4,356.6
Average Fixed Interest Rate (%)	4.84	4.73	1.11	4.96	5.95	6.62	6.32	—
Variable Rate ($)	—	—	—	—	—	67.8	67.8	64.9
Average Variable Interest Rate (%)	—	—	—	—	—	0.11	0.11	—
Interest Rate Swaps:								
Pay Fixed/Receive Variable ($)	600.0	650.0	—	—	—	71.4	1,321.4	30.6
Average Pay Interest Rate (%)	3.96	4.16	—	—	—	3.29	4.02	—
Average Receive Interest Rate (%)	0.25	0.25	—	—	—	0.06	0.24	—

While a decrease in interest rates would increase the fair value of debt, it is unlikely that events which would result in a realized loss will occur.

The above tables exclude long-term debt of $3 million at December 31, 2013, which did not have stated interest rates associated with them.

For further discussion of Consolidated SCE&G's long-term debt and interest rate derivatives, see Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS — Liquidity and Capital Resources and Notes 4 and 6 to the consolidated financial statements.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholder of
South Carolina Electric & Gas Company
Cayce, South Carolina

We have audited the accompanying consolidated balance sheets of South Carolina Electric & Gas Company and affiliates (the "Company") as of December 31, 2014 and 2013, and the related consolidated statements of income, comprehensive income, cash flows, and changes in equity for each of the three years in the period ended December 31, 2014. Our audits also included the financial statement schedule listed in Part IV at Item 15. These financial statements and the financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

/s/DELOITTE & TOUCHE LLP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization and Principles of Consolidation

SCE&G, a public utility, is a South Carolina corporation organized in 1924 and a wholly-owned subsidiary of SCANA, a South Carolina corporation. Consolidated SCE&G engages predominantly in the generation and sale of electricity to wholesale and retail customers in South Carolina and in the purchase, sale and transportation of natural gas to retail customers in South Carolina.

SCE&G has determined that it has a controlling financial interest in GENCO and Fuel Company (which are considered to be VIEs), and accordingly, the accompanying consolidated financial statements include the accounts of SCE&G, GENCO and Fuel Company. The equity interests in GENCO and Fuel Company are held solely by SCANA, SCE&G's parent. Accordingly, GENCO's and Fuel Company's equity and results of operations are reflected as noncontrolling interest in Consolidated SCE&G's consolidated financial statements. Intercompany balances and transactions between SCE&G, Fuel Company and GENCO have been eliminated in consolidation.

GENCO owns a coal-fired electric generating station with a 605 megawatt net generating capacity (summer rating). GENCO's electricity is sold, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a power purchase agreement and related operating agreement. The effects of these transactions are eliminated in consolidation. Substantially all of GENCO's property (carrying value of approximately $472 million) serves as collateral for its long-term borrowings. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission and other environmental allowances. See also Note 4.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Utility Plant

Utility plant is stated at original cost. The costs of additions, replacements and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision and AFC, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged to accumulated depreciation. The costs of repairs and replacements of items of property determined to be less than a unit of property or that do not increase the asset's life or functionality are charged to expense.

AFC is a noncash item that reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion of, as a component of construction cost, the costs of debt and equity capital dedicated to construction investment. AFC is included in rate base investment and depreciated as a component of plant cost in establishing rates for utility services. Consolidated SCE&G calculated AFC using average composite rates of 6.5% for 2014, 6.9% for 2013
and 6.3% for 2012. These rates do not exceed the maximum allowable rate as calculated under FERC Order No. 561. SCE&G capitalizes interest on nuclear fuel in process at the actual interest cost incurred.

Consolidated SCE&G records provisions for depreciation and amortization using the straight-line method based on the estimated service lives of the various classes of property. The composite weighted average depreciation rates for utility plant assets were 2.84% in 2014, 2.94% in 2013 and 2.91% in 2012.

SCE&G records nuclear fuel amortization using the units-of-production method. Nuclear fuel amortization is included in "Fuel used in electric generation" and recovered through the fuel cost component of retail electric rates. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the DOE under a contract for disposal of spent nuclear fuel.

Jointly Owned Utility Plant

SCE&G jointly owns and is the operator of Summer Station Unit 1. In addition, SCE&G will jointly own and will be the operator of the New Units being designed and constructed at the site of Summer Station. Each joint owner provides its own financing and shares the direct expenses and generation output in proportion to its ownership of a unit. SCE&G's share of the direct expenses is included in the corresponding operating expenses on its income statement.

As of December 31,	2014		2013	
	Unit 1	New Units	Unit 1	New Units
Percent owned	66.7%	55.0%	66.7%	55.0%
Plant in service	$ 1.2 billion	—	$ 1.1 billion	—
Accumulated depreciation	$ 578.3 million	—	$ 566.9 million	—
Construction work in progress	$ 199.3 million	$ 2.7 billion	$ 127.1 million	$ 2.3 billion

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of the New Units at the site of Summer Station. For a discussion of expected cash outlays and expected in-service dates for the New Units and a description of SCE&G's agreement to acquire an additional 5% ownership in the New Units, see Note 10.

Included within receivables on the balance sheet were amounts due to SCE&G from Santee Cooper for its share of direct expenses and construction costs for Summer Station Unit 1 and the New Units. These amounts totaled $88.9 million at December 31, 2014 and $75.6 million at December 31, 2013.

Plant to be Retired

SCE&G expects to retire three units that are or were coal-fired by 2020, subject to future developments in environmental regulations, among other matters. The net carrying value of these units is identified as Plant to be Retired, Net in the consolidated financial statements. SCE&G plans to request recovery of and a return on the net carrying value of these units in future rate proceedings in connection with their retirement, and expects that such deferred amounts will be recovered through rates. In the meantime, these units remain in rate base, and SCE&G depreciates them using composite straight-line rates approved by the SCPSC. The net carrying value of three previously retired units is recorded in regulatory assets within unrecovered plant (see Note 2).

Major Maintenance

Planned major maintenance costs related to certain fossil fuel turbine equipment and nuclear refueling outages are accrued to regulatory assets in periods other than when incurred in accordance with approval by the SCPSC for such accounting treatment and rate recovery of expenses accrued thereunder. The difference between such cumulative major maintenance costs and cumulative collections are classified as a regulatory asset or regulatory liability on the balance sheet (see Note 2). Other planned major maintenance is expensed when incurred.

Through 2017, SCE&G is authorized to collect $18.4 million annually through electric rates to offset certain turbine maintenance expenditures. For the years ended December 31, 2014 and 2013, SCE&G incurred $19.4 million and $18.1 million, respectively, for turbine maintenance.

Nuclear refueling outages are scheduled 18 months apart. SCE&G accrued $1.2 million per month from July 2011 through December 2012 for its portion of the outages in the fall of 2012. Total costs for the 2012 outage were $32.3 million, of which SCE&G was responsible for $21.5 million. In connection with the SCPSC's December 2012 approval of SCE&G's retail electric rates (see Note 2), effective January 1, 2013, SCE&G began to accrue $1.4 million per month for its portion of the nuclear refueling outages that are scheduled to occur from the spring of 2014 through the spring of 2020. Total costs for the 2014 outage were $43.7 million, of which SCE&G was responsible for $29.1 million.

Nuclear Decommissioning

Based on a decommissioning cost study, SCE&G’s two-thirds share of estimated site-specific nuclear decommissioning costs for Summer Station Unit 1, including the cost of decommissioning plant components both subject to and not subject to radioactive contamination, totals $696.8 million, stated in 2012 dollars. Santee Cooper is responsible for decommissioning costs related to its one-third ownership interest in Summer Station Unit 1. The cost estimate assumes that the site will be maintained over a period of approximately 60 years in such a manner as to allow for subsequent decontamination that would permit release for unrestricted use.

Under SCE&G's method of funding decommissioning costs, amounts collected through rates ($3.2 million pre-tax in each of 2014, 2013 and 2012) are invested in insurance policies on the lives of certain SCE&G and affiliate personnel. SCE&G transfers to an external trust fund the amounts collected through electric rates, insurance proceeds and interest thereon, less expenses. The trusteed asset balance reflects the net cash surrender value of the insurance policies and cash held by the trust. Management intends for the fund, including earnings thereon, to provide for all eventual decommissioning expenditures for Summer Station Unit 1 on an after-tax basis.

Cash and Cash Equivalents

Consolidated SCE&G considers temporary cash investments having original maturities of three months or less at time of purchase to be cash equivalents. These cash equivalents are generally in the form of commercial paper, certificates of deposit, repurchase agreements and treasury bills.

Accounts Receivable

Accounts receivable reflect amounts due from customers arising from the delivery of energy or related services and include revenues earned pursuant to revenue recognition practices described below. These receivables include both billed and unbilled amounts. Receivables are generally due within one month of receipt of invoices which are presented on a monthly cycle basis.

Inventory

Materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when used. Fuel inventory includes the average cost of coal, natural gas and fuel oil. Fuel is charged to inventory when purchased and is expensed, at weighted average cost, as used and recovered through fuel cost recovery rates approved by the SCPSC. Emission allowances are included in inventory at average cost. Emission allowances are expensed at weighted average cost as used and recovered through fuel cost recovery rates approved by the SCPSC.

Income Taxes

Consolidated SCE&G is included in the consolidated federal income tax return of SCANA. Under a joint consolidated income tax allocation agreement, each SCANA subsidiary's current and deferred tax expense is computed on a stand-alone basis. Deferred tax assets and liabilities are recorded for the tax effects of all significant temporary differences between the book basis and tax basis of assets and liabilities at currently enacted tax rates. Deferred tax assets and liabilities are adjusted for changes in such tax rates through charges or credits to regulatory assets or liabilities if they are expected to be recovered from, or passed through to, customers; otherwise, they are charged or credited to income tax expense. Also under provisions of the income tax allocation agreement, certain tax benefits of the parent holding company are distributed in cash to tax paying affiliates, including Consolidated SCE&G, in the form of capital contributions.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G records costs that have been or are expected to be allowed in the ratemaking process in a period different from the period in which the costs would be charged to expense or revenues would be recognized by a nonregulated enterprise. These regulatory assets and liabilities represent expenses deferred for future recovery from customers or obligations to be refunded to customers and are primarily classified in the balance sheet as regulatory assets and regulatory liabilities (see Note 2) and are amortized consistent with the treatment of the related costs in the ratemaking process.

Debt Premium, Discount and Expense, Unamortized Loss on Reacquired Debt

Consolidated SCE&G records long-term debt premium and discount within long-term debt and amortizes them as components of interest charges over the terms of the respective debt issues. Other issuance expense and gains or losses on reacquired debt that is refinanced are recorded in other deferred debits or credits and are amortized over the term of the replacement debt, also as interest charges.

Environmental

SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require environmental clean-up. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. Environmental remediation liabilities are accrued when the criteria for loss contingencies are met. These estimates are refined as additional information becomes available; therefore, actual expenditures could differ significantly from the original estimates. Probable and estimable costs are accrued related to environmental sites on an undiscounted basis. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Amounts expected to be recovered through rates are recorded in regulatory assets and, if applicable, amortized over approved amortization periods. Other environmental costs are expensed as incurred.

Income Statement Presentation

Consolidated SCE&G presents the revenues and expenses of its regulated activities (including those activities of segments described in Note 12) within operating income, and it presents all other activities within other income (expense).

Revenue Recognition

Consolidated SCE&G records revenues during the accounting period in which it provides services to customers and includes estimated amounts for electricity and natural gas delivered but not billed. Unbilled revenues totaled $115.8 million at December 31, 2014 and $111.9 million at December 31, 2013.

Fuel costs, emission allowances and certain environmental reagent costs for electric generation are collected through the fuel cost component in retail electric rates. This component is established by the SCPSC during fuel cost hearings. Any difference between actual fuel costs and amounts contained in the fuel cost component is adjusted through revenue and is deferred and included when determining the fuel cost component during subsequent hearings.

Customers subject to the PGA are billed based on a cost of gas factor calculated in accordance with a gas cost recovery procedure approved by the SCPSC and subject to adjustment monthly. Any difference between actual gas costs and amounts contained in rates is adjusted through revenue and is deferred and included when making the next adjustment to the cost of gas factor.

SCE&G's gas rate schedules for residential, small commercial and small industrial customers include a WNA which minimizes fluctuations in gas revenues due to abnormal weather conditions. In August 2010, SCE&G implemented an eWNA on a pilot basis for its electric customers; effective with the first billing cycle of 2014, the eWNA was discontinued as approved by the SCPSC. See Note 2.

Taxes that are billed to and collected from customers are recorded as liabilities until they are remitted to the respective taxing authority. Such taxes are not included in revenues or expenses in the statements of income.

New Accounting Matters

In April 2014, the Financial Accounting Standards Board issued new accounting guidance for reporting discontinued operations and disclosures of disposals of components of an entity. Under this new guidance, only those discontinued operations which represent a strategic shift that will have a major effect on an entity's operations and financial results should be reported as discontinued operations in the financial statements. As permitted, Consolidated SCE&G adopted this new guidance for the period ended December 31, 2014.

In May 2014, the Financial Accounting Standards Board issued new accounting guidance for revenue arising from contracts with customers that supersedes most current revenue recognition guidance, including industry-specific guidance. This new revenue recognition model provides a five-step analysis in determining when and how revenue is recognized, and will require revenue recognition to depict the transfer of promised goods or services to customers in an amount that reflects the consideration a company expects to receive in exchange for those goods or services. Consolidated SCE&G will be required to adopt the new guidance in the first quarter of 2017, and early adoption is not permitted. Consolidated SCE&G has not determined the impact this guidance will have on its results of operations, cash flows or financial position.

2. RATE AND OTHER REGULATORY MATTERS

Electric - Cost of Fuel

SCE&G's retail electric rates include a cost of fuel component approved by the SCPSC which may be adjusted periodically to reflect changes in the price of fuel purchased. In connection with its annual review of base rates for fuel costs, and by order dated April 30, 2013, the SCPSC approved a settlement agreement among SCE&G, the ORS, and the SCEUC in which SCE&G agreed to reduce its environmental fuel cost component effective with the first billing cycle of May 2013. The order also provided for the accrual of certain debt-related carrying costs on a portion of SCE&G's under-collected balance of base fuel costs, and approved SCE&G's total fuel cost component.

Pursuant to a November 2013 SCPSC accounting order, SCE&G's electric revenue for 2013 was reduced for adjustments to the fuel cost component and related under-collected fuel balance of $41.6 million. Such adjustments are fully offset by the recognition within other income, also pursuant to that accounting order, of gains realized upon the settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. See also Note 6.

By order dated April 29, 2014, the SCPSC approved a settlement agreement among SCE&G, the ORS, and the SCEUC in which SCE&G agreed to increase its base fuel cost component by approximately $10.3 million for the 12-month period beginning with the first billing cycle of May 2014. The base fuel cost increase was offset by a reduction in SCE&G's rate rider related to pension costs, which was approved by the SCPSC in March 2014. In addition, pursuant to the April 29, 2014 order, SCE&G's electric revenue for 2014 was reduced by approximately $46 million for adjustments to the fuel cost component and related under-collected fuel balance. Such adjustments are fully offset by the recognition within other income of gains realized from the late 2013 settlement of certain interest rate derivatives which had been entered into in anticipation of the issuance of long-term debt, which gains had been deferred as a regulatory liability. The order also provided for the accrual of certain debt-related carrying costs on its under-collected balance of base fuel costs during the period May 1, 2014 through April 30, 2015. See also Note 6.

The cost of fuel includes amounts paid by SCE&G pursuant to the Nuclear Waste Act for the disposal of spent nuclear fuel. As a result of a November 2013 decision by the Court of Appeals, the DOE set the Nuclear Waste Act fee to zero effective May 16, 2014. The SCPSC will consider the impact of this action in future cost of fuel rate proceedings.

In October 2014, the SCPSC initiated its 2015 annual review of base rates for fuel costs. A public hearing for this annual review is scheduled for April 9, 2015. In connection with its January 2015 DSM Programs filing (see Electric-Base Rates herein), SCE&G notified the SCPSC that it anticipates proposing an adjustment to SCE&G's cost of fuel that, if approved, will result in an overall decrease to its base fuel costs beginning with the first billing cycle of May 2015.

Electric - Base Rates

In October 2013, SCE&G received an accounting order from the SCPSC directing it to remove from rate base deferred income tax assets arising from capital expenditures related to the New Units and to accrue carrying costs (recorded as a regulatory asset) on those amounts during periods in which they are not included in rate base. Such carrying costs are determined at SCE&G’s weighted average long-term borrowing rate, and $5.8 million and $2.9 million of such carrying costs were accrued within other income during 2014 and 2013, respectively. SCE&G anticipates that when the New Units are placed in service and accelerated tax deprecation is recognized on them, these deferred income tax assets will decline. When these assets are fully offset by related deferred income tax liabilities, the carrying cost accruals will cease, and the regulatory asset will begin to be amortized.

In December 2012, the SCPSC approved a 4.23% overall increase in SCE&G's retail electric base rates, effective January 1, 2013, and authorized an allowed return on common equity of 10.25%. The SCPSC also approved a mid-period reduction to the cost of fuel component in rates, a reduction in the DSM Programs component rider to retail rates, and the recovery of and a return on the net carrying value of certain retired generating plant assets described below. In February 2013, the SCPSC denied the SCEUC's petition for rehearing and the denial was not appealed.

Prior to 2014, certain of SCE&G's electric rates included an adjustment for eWNA. The eWNA was designed to mitigate the effects of abnormal weather on residential and commercial customers' bills. On November 26, 2013, SCE&G, ORS and certain other parties filed a joint petition with the SCPSC requesting, among other things, that the SCPSC discontinue the eWNA effective with bills rendered on or after the first billing cycle of January 2014. On December 20, 2013, the SCPSC granted the relief requested in the joint petition. In connection with the termination of the eWNA effective

December 31, 2013, and pursuant to an SCPSC order, electric revenues were reduced to reverse the prior accrual of an under-collected balance of $8.5 million. This revenue reduction was fully offset by the recognition within other income of $8.5 million of gains realized upon the settlement of certain interest rate derivatives, which gains had been deferred as a regulatory liability.

SCE&G files an IRP with the SCPSC annually which evaluates future electric generation needs based on a variety of factors, including customer energy demands, EPA regulations, reserve margins and fuel costs. SCE&G previously identified six coal-fired units that it has subsequently retired or intends to retire by 2020, subject to future developments in environmental regulations, among other matters. Three of these units had been retired by December 31, 2013, and their net carrying value is recorded in regulatory assets as unrecovered plant and is being amortized over the units' previously estimated remaining useful lives as approved by the SCPSC. The net carrying value of the remaining units is included in Plant to be Retired, Net. In connection with their retirement, SCE&G expects to be allowed a recovery of and a return on the net carrying value of these remaining units through rates. In the meantime, these units remain in rate base, and SCE&G continues to depreciate them using composite straight-line rates approved by the SCPSC.

SCE&G's DSM Programs for electric customers provide for an annual rider, approved by the SCPSC, to allow recovery of the costs and net lost revenues associated with the DSM Programs, along with an incentive for investing in such programs. SCE&G submits annual filings regarding the DSM Programs, net lost revenues, program costs, incentives and net program benefits. The SCPSC approved recovery of the following amounts pursuant to annual DSM Programs filings, which went into effect as indicated below:

Year	Effective	Amount
2014	First billing cycle of May	$15.4 million
2013	First billing cycle of May	$16.9 million
2012	First billing cycle of May	$19.6 million

Other activity related to SCE&G’s DSM Programs is as follows:

- In May 2013, the SCPSC ordered the deferral of one-half of the net lost revenues and provided for their recovery over a 12-month period beginning with the first billing cycle in May 2014.

- In April 2014, the SCPSC approved SCE&G's request to (1) recover one-half of the balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2014 and to recover the remaining balance of allowable costs beginning with bills rendered on and after the first billing cycle of May 2015, (2) utilize approximately $17.8 million of gains from the late 2013 settlement of certain interest rate derivative instruments, previously deferred as regulatory liabilities, to offset a portion of the net lost revenues component of SCE&G's DSM Program rider, and (3) apply $5.0 million of its storm damage reserve and $5.0 million of the gains from the settlement of certain interest rate derivative instruments to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets resulting from the May 2013 order previously described.

- In addition, in April 2014 the SCPSC, upon recommendation of the ORS, reduced by 25%, or $6.6 million, the amount of net lost revenues SCE&G expects to experience over the 12-month period beginning with the first billing cycle of May 2014, and ordered that the $6.6 million be applied to decrease the amount of program costs deferred for recovery. Actual net lost revenues not collected in the current DSM Programs rate rider are subject to true up in the following program year.

- In January 2015, SCE&G submitted its annual DSM Programs filing to the SCPSC. If approved, the filing would, among other things, allow recovery of $33.0 million of costs and net lost revenues associated with the DSM Programs, along with an incentive to invest in such programs.

Electric - BLRA

In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on the March 30, 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain pre-fabricated structural modules for the New Units and unanticipated rock conditions at the site. In December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

Under the BLRA, SCE&G is allowed to file revised rates with the SCPSC each year to incorporate the financing cost of any incremental construction work in progress incurred for new nuclear generation. Requested rate adjustments are based on SCE&G's updated cost of debt and capital structure and on an allowed return on common equity of 11.0%. The SCPSC has approved recovery of the following amounts under the BLRA effective for bills rendered on and after October 30 in the following years:

Year	Increase	Amount
2014	2.8%	$66.2 million
2013	2.9%	$67.2 million
2012	2.3%	$52.1 million

Gas

The RSA is designed to reduce the volatility of costs charged to customers by allowing for more timely recovery of the costs that regulated utilities incur related to natural gas infrastructure. The SCPSC has approved the following rate changes pursuant to annual RSA filings effective with the first billing cycle of November in the following years:

Year	Action		Amount	
2014	0.6%	Decrease	$	2.6 million
2013	No change			
2012	2.1%	Increase	$	7.5 million

SCE&G's natural gas tariffs include a PGA that provides for the recovery of actual gas costs incurred, including transportation costs. SCE&G's gas rates are calculated using a methodology which may adjust the cost of gas monthly based on a 12-month rolling average, and its gas purchasing policies and practices are reviewed annually by the SCPSC. The annual reviews conducted for each of the 12-month periods ended July 31, 2014 and 2013 resulted in the SCPSC issuing an order finding that SCE&G's gas purchasing policies and practices during each review period were reasonable and prudent.

Regulatory Assets and Regulatory Liabilities

Consolidated SCE&G has significant cost-based, rate-regulated operations and recognizes in its financial statements certain revenues and expenses in different time periods than do enterprises that are not rate-regulated. As a result, Consolidated SCE&G has recorded regulatory assets and regulatory liabilities, which are summarized in the following tables. Other than unrecovered plant, substantially all regulatory assets are either explicitly excluded from rate base or are effectively excluded from rate base due to their being offset by related liabilities.

Millions of dollars	December 31, 2014	December 31, 2013
Regulatory Assets:		
Accumulated deferred income taxes	$ 278	$ 256
Under-collections-electric fuel adjustment clause	20	18
Environmental remediation costs	36	37
AROs and related funding	347	350
Franchise agreements	26	31
Deferred employee benefit plan costs	310	215
Planned major maintenance	2	—
Deferred losses on interest rate derivatives	453	124
Deferred pollution control costs	36	37
Unrecovered plant	137	145
DSM Programs	56	51
Other	44	39
Total Regulatory Assets	$ 1,745	$ 1,303
Regulatory Liabilities:		
Accumulated deferred income taxes	$ 17	$ 19
Asset removal costs	505	495
Storm damage reserve	6	27
Deferred gains on interest rate derivatives	82	181
Planned major maintenance	—	10
Total Regulatory Liabilities	$ 610	$ 732

Accumulated deferred income tax liabilities that arose from utility operations that have not been included in customer rates are recorded as a regulatory asset. Substantially all of these regulatory assets relate to depreciation and are expected to be recovered over the remaining lives of the related property which may range up to approximately 70 years. Similarly, accumulated deferred income tax assets arising from deferred investment tax credits are recorded as a regulatory liability.

Under-collections - electric fuel adjustment clause represent amounts due from customers pursuant to the fuel adjustment clause as approved by the SCPSC which are expected to be recovered in retail electric rates over periods exceeding 12 months.

Environmental remediation costs represent costs associated with the assessment and clean-up of sites currently or formerly owned by SCE&G and are expected to be recovered over periods of up to approximately 25 years.

ARO and related funding represents the regulatory asset associated with the legal obligation to decommission and dismantle Summer Station and conditional AROs related to generation, transmission and distribution properties, including gas pipelines. These regulatory assets are expected to be recovered over the related property lives and periods of decommissioning which may range up to approximately 90 years.

Franchise agreements represent costs associated with electric and gas franchise agreements with the cities of Charleston and Columbia, South Carolina. Based on an SCPSC order, SCE&G is recovering these amounts through cost of service rates through 2020.

Employee benefit plan costs of the regulated utilities have historically been recovered as they have been recorded under generally accepted accounting principles. Deferred employee benefit plan costs represent pension and other postretirement benefit costs which were accrued as liabilities and treated as regulatory assets pursuant to FERC guidance, and costs deferred pursuant to specific SCPSC regulatory orders. Accordingly, in 2013 SCE&G began recovering through utility rates approximately $63 million of deferred pension costs for electric operations over approximately 30 years and approximately $14 million of deferred pension costs for gas operations over approximately 14 years. The remainder of the deferred benefit costs are expected to be recovered through utility rates, primarily over average service periods of participating employees, or up to approximately 12 years.

Planned major maintenance related to certain fossil-fueled turbine/generation equipment and nuclear refueling outages is accrued in periods other than when incurred, as approved pursuant to specific SCPSC orders. SCE&G collects and accrues $18.4 million annually for fossil-fueled turbine/generation equipment maintenance, and collects and accrues $17.2 million annually for nuclear-related refueling charges.

Deferred losses or gains on interest rate derivatives represent (i) the effective portions of changes in fair value and payments made or received upon settlement of certain interest rate derivatives designated as cash flow hedges and (ii) the changes in fair value and payments made or received upon settlement of certain other interest rate derivatives not so designated. The amounts recorded with respect to (i) are expected to be amortized to interest expense over the lives of the underlying debt through 2038. The amounts recorded with respect to (ii) are expected to be similarly amortized to interest expense over periods up to approximately 50 years except when, in the case of deferred gains, such amounts are applied otherwise at the direction of the SCPSC. Also, in 2014, as discussed above at Rate Matters - Electric - Cost of Fuel and Rate Matters - Electric - Base Rates, certain of these deferred amounts were applied to offset under-collected fuel balances and unrecorded net lost revenues related to DSM Programs.

Deferred pollution control costs represent deferred depreciation and operating and maintenance costs associated with the scrubbers installed at certain coal-fired generating plants pursuant to specific regulatory orders. Such costs are being recovered through utility rates through 2045.

Unrecovered plant represents the carrying value of coal-fired generating units, including related materials and supplies inventory, retired from service prior to being fully depreciated. Pursuant to SCPSC approval, SCE&G is amortizing these amounts through cost of service rates over the units' previous estimated remaining useful lives through 2025. Unamortized amounts are included in rate base and are earning a current return.

DSM Programs represent deferred costs associated with such programs. As a result of an April 2014 SCPSC order, deferred costs are currently being recovered over approximately ten years through an approved rate rider. See Rate Matters - Electric - Base Rates above for details regarding the 2014 filing with the SCPSC regarding recovery of these deferred costs.

Various other regulatory assets are expected to be recovered in rates over periods of up to approximately 30 years.

Asset removal costs represent estimated net collections through depreciation rates of amounts to be incurred for the non-legal obligation to remove assets in the future.

The storm damage reserve represents an SCPSC-approved collection through SCE&G electric rates, capped at $100 million, which can be applied to offset incremental storm damage costs in excess of $2.5 million in a calendar year. Pursuant to specific regulatory orders, SCE&G has suspended storm damage reserve collection through rates indefinitely. In 2014, $16.8 million of the reserve was applied to offset incremental storm damage costs. Also, as discussed above at Rate Matters - Electric - Base Rates, in April 2014 $5.0 million of the reserve was applied to offset unrecovered net lost revenues related to DSM Programs.

The SCPSC or the FERC has reviewed and approved through specific orders most of the items shown as regulatory assets. Other regulatory assets include, but are not limited to, certain costs which have not been specifically approved for recovery by the SCPSC or by the FERC. In recording such costs as regulatory assets, management believes the costs will be allowable under existing rate-making concepts that are embodied in rate orders received by SCE&G. The costs are currently not being recovered, but are expected to be recovered through rates in future periods. In the future, as a result of deregulation or other changes in the regulatory environment or changes in accounting requirements, Consolidated SCE&G could be required to write off its regulatory assets and liabilities. Such an event could have a material effect on Consolidated SCE&G's results of operations, liquidity or financial position in the period the write-off would be recorded.

3. EQUITY

Authorized shares of SCE&G common stock were 50 million as of December 31, 2014 and 2013. Authorized shares of SCE&G preferred stock were 20 million, of which 1,000 shares, no par value, were held by SCANA as of December 31, 2014 and 2013.

SCE&G's articles of incorporation do not limit the dividends that may be paid on its common stock. However, SCE&G's bond indenture contains provisions that, under certain circumstances, which SCE&G considers to be remote, could limit the payment of cash dividends on its common stock.

The Federal Power Act requires the appropriation of a portion of certain earnings from hydroelectric projects. At December 31, 2014 and 2013, retained earnings of approximately $67.7 million and $63.1 million, respectively, were restricted by this requirement as to payment of cash dividends on common stock.

4. LONG-TERM AND SHORT-TERM DEBT

Long-term debt by type with related weighted average effective interest rates and maturities at December 31 is as follows:

Dollars in millions	Maturity	2014 Balance	2014 Rate	2013 Balance	2013 Rate
First Mortgage Bonds (secured)	2018 - 2064	$ 3,840	5.56%	$ 3,540	5.60%
GENCO Notes (secured)	2015 - 2024	227	5.90%	233	5.89%
Industrial and Pollution Control Bonds (a)	2028 - 2038	122	3.51%	158	3.83%
Nuclear Fuel Financing	2016	100	0.78%	100	0.78%
Other	2015 - 2027	14	2.63%	16	2.26%
Total debt		4,303		4,047	
Current maturities of long-term debt		(10)		(48)	
Unamortized premium		6		8	
Total long-term debt, net		$ 4,299		$ 4,007	

(a) Includes variable rate debt of $67.8 million at December 31, 2014 (rate of 0.04%) and 2013 (rate of 0.11%), which are hedged by fixed swaps.

The annual amounts of long-term debt maturities for the next five years are summarized as follows:

Year	Millions of dollars
2015	$ 10
2016	109
2017	9
2018	719
2019	8

Substantially all of SCE&G's and GENCO's electric utility plant is pledged as collateral in connection with long-term debt.

SCE&G is subject to a bond indenture dated April 1, 1993 (Mortgage) covering substantially all of its electric properties under which all of its first mortgage bonds (Bonds) have been issued. Bonds may be issued under the Mortgage in an aggregate principal amount not exceeding the sum of (1) 70% of Unfunded Net Property Additions (as therein defined), (2) the aggregate principal amount of retired Bonds and (3) cash deposited with the trustee. Bonds, other than certain Bonds issued on the basis of retired Bonds, may be issued under the Mortgage only if Adjusted Net Earnings (as therein defined) for 12 consecutive months out of the 18 months immediately preceding the month of issuance are at least twice (2.0) the annual interest requirements on all outstanding Bonds and Bonds to be outstanding (Bond Ratio). For the year ended December 31, 2014, the Bond Ratio was 5.41.

Lines of Credit and Short-Term Borrowings

At December 31, 2014 and 2013, SCE&G (including Fuel Company) had available the following committed LOC and had outstanding the following LOC-related obligations and commercial paper borrowings:

Millions of dollars		2014		2013
Lines of credit:				
Total committed long-term	$	1,400	$	1,400
Outstanding commercial paper (270 or fewer days)	$	709	$	251
Weighted average interest rate		0.52%		0.27%
Letters of credit supported by an LOC	$	0.3	$	0.3
Available	$	691	$	1,149

SCE&G and Fuel Company are parties to five-year credit agreements in the amount of $1.2 billion (of which $500 million relates to Fuel Company). In addition, SCE&G is party to a three-year credit agreement in the amount of $200 million. In October 2014, the term of the five-year agreements was extended by one year, such that they expire in October 2019. The three-year agreement expires in October 2016. These credit agreements are used for general corporate purposes, including liquidity support for each company's commercial paper program and working capital needs and, in the case of Fuel Company, to finance or refinance the purchase of nuclear fuel, certain fossil fuels, and emission and other environmental allowances. These committed long-term facilities are revolving lines of credit under credit agreements with a syndicate of banks. Wells Fargo Bank, National Association, Bank of America, N. A. and Morgan Stanley Bank, N.A. each provide 10.7% of the aggregate $1.4 billion credit facilities, JPMorgan Chase Bank, N.A., Mizuho Corporate Bank, Ltd., TD Bank N.A., Credit Suisse AG, Cayman Islands Branch and UBS Loan Finance LLC each provide 8.9% and Branch Banking and Trust Company, Union Bank, N.A. and U.S. Bank National Association each provide 6.3%. Two other banks provide the remaining support. Consolidated SCE&G pays fees to the banks as compensation for maintaining the committed lines of credit. Such fees were not material in any period presented.

Consolidated SCE&G is obligated with respect to an aggregate of $67.8 million of industrial revenue bonds which are secured by letters of credit issued by TD Bank N.A. These letters of credit expire, subject to renewal, in the fourth quarter of 2019.

Consolidated SCE&G pays fees to the banks as compensation for maintaining committed lines of credit. Such fees were not material in any period presented.

Consolidated SCE&G participates in a utility money pool with SCANA and certain other subsidiaries of SCANA. Money pool borrowings and investments bear interest at short-term market rates. Consolidated SCE&G's interest income and expense from money pool transactions were not significant for any period presented. At December 31, 2014 Consolidated SCE&G had outstanding money pool borrowings due to an affiliate of $83 million and money pool investments due from an affiliate of $80 million. At December 31, 2013 Consolidated SCE&G had outstanding money pool borrowings due to an affiliate of $27.3 million. On the consolidated balance sheets, amounts due from an affiliate are included within Receivables-affiliated companies, and amounts due to an affiliate are included within Affiliated payables.

5. INCOME TAXES

Components of income tax expense are as follows:

Millions of dollars	2014	2013	2012
Current taxes:			
Federal	$ 39	$ 146	$ 91
State	(6)	13	8
Total current taxes	33	159	99
Deferred taxes, net:			
Federal	157	25	62
State	32	9	12
Total deferred taxes	189	34	74
Investment tax credits:			
Amortization of amounts deferred—state	(1)	(1)	(13)
Amortization of amounts deferred—federal	(3)	(3)	(3)
Total investment tax credits	(4)	(4)	(16)
Total income tax expense	$ 218	$ 189	$ 157

The difference between actual income tax expense and the amount calculated from the application of the statutory 35% federal income tax rate to pre-tax income is reconciled as follows:

Millions of dollars	2014	2013	2012
Net income	$ 446	$ 380	$ 341
Income tax expense	218	189	157
Noncontrolling interest	12	11	11
Total pre-tax income	$ 676	$ 580	$ 509
Income taxes on above at statutory federal income tax rate	$ 237	$ 203	$ 178
Increases (decreases) attributed to:			
State income taxes (less federal income tax effect)	21	18	17
State investment tax credits (less federal income tax effect)	(5)	(5)	(13)
Allowance for equity funds used during construction	(10)	(9)	(7)
Amortization of federal investment tax credits	(3)	(3)	(3)
Section 41 tax credits	(3)	—	—
Section 45 tax credits	(9)	(5)	(5)
Domestic production activities deduction	(7)	(11)	(9)
Other differences, net	(3)	1	(1)
Total income tax expense	$ 218	$ 189	$ 157

The tax effects of significant temporary differences comprising Consolidated SCE&G's net deferred tax liability are as follows:

Millions of dollars	2014	2013
Deferred tax assets:		
Nondeductible accruals	$ 47	$ 17
Asset retirement obligation, including nuclear decommissioning	205	209
Unamortized investment tax credits	17	19
Regulatory liability, net gain on interest rate derivative contracts settlement	—	27
Other	6	11
Total deferred tax assets	275	283
Deferred tax liabilities:		
Property, plant and equipment	$ 1,623	$ 1,494
Regulatory asset, asset retirement obligation	115	114
Deferred employee benefit plan costs	91	54
Deferred fuel costs	27	26
Regulatory asset, unrecovered plant	53	55
Regulatory asset, net loss on interest rate derivative contracts settlement	21	—
Demand side management costs	21	21
Prepayments	25	23
Other	23	18
Total deferred tax liabilities	1,999	1,805
Net deferred tax liability	$ 1,724	$ 1,522

Consolidated SCE&G is included in the consolidated federal income tax return of SCANA and files various applicable state and local income tax returns. The IRS has completed examinations of SCANA's federal returns through 2004, and SCANA's federal returns through 2007 are closed for additional assessment. The IRS is currently examining SCANA's open federal returns through 2012. With few exceptions, Consolidated SCE&G is no longer subject to state and local income tax examinations by tax authorities for years before 2010.

Changes to Unrecognized Tax Benefits

Millions of dollars	2014	2013	2012
Unrecognized tax benefits, January 1	$ 3	—	$ 38
Gross increases-uncertain tax positions in prior period	—	—	—
Gross decreases-uncertain tax positions in prior period	—	—	(38)
Gross increases-current period uncertain tax positions	13	$ 3	—
Settlements	—	—	—
Lapse of statute of limitations	—	—	—
Unrecognized tax benefits, December 31	$ 16	$ 3	$ —

In connection with the change in method of tax accounting for certain repair costs in prior years, the Company had previously recorded an unrecognized tax benefit. During the first quarter of 2012, the publication of new administrative guidance from the IRS allowed Consolidated SCE&G to recognize this benefit. Since this change was primarily a temporary difference, the recognition of this benefit did not have a significant effect on the Consolidated SCE&G's effective tax rate.

During 2013 and 2014, Consolidated SCE&G amended certain of its tax returns to claim certain tax-defined research and development deductions and credits. In connection with these filings, Consolidated SCE&G recorded an unrecognized tax benefit of $16 million. If recognized, $13 million of the tax benefit would affect Consolidated SCE&G's effective tax rate. It is reasonably possible that this tax benefit will increase by an additional $2 million within the next 12 months. It is also reasonably possible that this tax benefit may decrease by $7 million within the next 12 months. No other material changes in the status of the Consolidated SCE&G's tax positions have occurred through December 31, 2014.

As of December 31, 2014, prepayments primarily relates to the late 2014 extension of the 50% bonus depreciation deduction.

Consolidated SCE&G recognizes interest accrued related to unrecognized tax benefits within interest expense and recognizes tax penalties within other expenses. In connection with the resolution of the uncertainty and recognition of the tax benefit in 2012, during 2012 Consolidated SCE&G reversed $2 million of interest expense which had been accrued during 2011. Consolidated SCE&G has not recorded interest expense or penalties associated with uncertain tax positions in 2013 or 2014.

6. DERIVATIVE FINANCIAL INSTRUMENTS

Consolidated SCE&G recognizes all derivative instruments as either assets or liabilities in its statements of financial position and measures those instruments at fair value. Consolidated SCE&G recognizes changes in the fair value of derivative instruments either in earnings or within regulatory assets or regulatory liabilities, depending upon the intended use of the derivative and the resulting designation.

Policies and procedures and risk limits are established to control the level of market, credit, liquidity and operational and administrative risks assumed by Consolidated SCE&G. SCANA's Board of Directors has delegated to a Risk Management Committee the authority to set risk limits, establish policies and procedures for risk management and measurement, and oversee and review the risk management process and infrastructure for SCANA and each of its subsidiaries, including Consolidated SCE&G. The Risk Management Committee, which is comprised of certain officers, including Consolidated SCE&G's Risk Management Officer and senior officers, apprises the Audit Committee of the Board of Directors with regard to the management of risk and brings to their attention significant areas of concern. Written policies define the physical and financial transactions that are approved, as well as the authorization requirements and limits for transactions.

Interest Rate Swaps

Consolidated SCE&G synthetically converts variable rate debt to fixed rate debt using swaps that are designated as cash flow hedges. Periodic payments to or receipts from swap counterparties related to these derivatives are recorded within interest expense.

In anticipation of the issuance of debt, Consolidated SCE&G may use treasury rate lock or forward starting swap agreements. Pursuant to regulatory orders issued in 2013, interest derivatives entered into by SCE&G after October 2013 are not designated as cash flow hedges and fair value changes and settlement amounts are recorded as regulatory assets and liabilities. Settlement losses on swaps will be amortized over the lives of subsequent debt issuances and gains may be applied to under-collected fuel, may be amortized to interest expense or may be applied as otherwise directed by the SCPSC. As discussed in Note 2, the SCPSC directed SCE&G to recognize $41.6 million and $8.5 million of realized gains (which had been deferred in regulatory liabilities) within other income, fully offsetting revenue reductions related to under-collected fuel balances and under-collected amounts arising under the eWNA program which was terminated at the end of 2013. As also discussed in Note 2, pursuant to regulatory orders issued in 2014, the SCPSC directed SCE&G to apply $46 million of these deferred gains to reduce under-collected fuel balances in April 2014. The SCPSC also approved SCE&G's request to utilize approximately $17.8 million of these gains to offset a portion of the net lost revenues component of SCE&G's DSM Program rider and apply $5.0 million of the gains to the remaining balance of deferred net lost revenues as of April 30, 2014, which had been deferred within regulatory assets.

Cash payments made or received upon settlement of these financial instruments are classified as investing activities for cash flow statement purposes.

Quantitative Disclosures Related to Derivatives

Consolidated SCE&G was a party to interest rate swaps designated as cash flow hedges with aggregate notional amounts of $36.4 million and $36.4 million at December 31, 2014 and 2013, respectively. Consolidated SCE&G was party to interest rate swaps not designated as cash flow hedges with an aggregate notional amount of $1.1 billion and $1.3 billion at December 31, 2014 and 2013, respectively.

The fair value of derivatives in the consolidated balance sheets is as follows:

Fair Values of Derivative Instruments	Asset Derivatives		Liability Derivatives	
Millions of dollars	**Balance Sheet Location**	**Fair Value**	**Balance Sheet Location**	**Fair Value**
As of December 31, 2014				
Designated as hedging instruments				
Interest rate contracts			Derivative financial instruments	$ 1
			Other deferred credits and other liabilities	8
Total				$ 9
Not designated as hedging instruments				
Interest rate contracts			Derivative financial instruments	$ 207
			Other deferred credits and other liabilities	17
Total				$ 224
As of December 31, 2013				
Designated as hedging instruments				
Interest rate contracts			Derivative financial instruments	$ 1
Total				$ 1
Not designated as hedging instruments				
Interest rate contracts	Other current assets	$ 13	Derivative financial instruments	$ 1
	Other deferred debits and other assets	19		
Total		$ 32		$ 1

The effect of derivative instruments on the consolidated statements of income is as follows:

Derivatives in Cash Flow Hedging Relationships	Gain (Loss) Deferred in Regulatory Accounts (Effective Portion)	Gain (Loss) Reclassified from Deferred Accounts into Income (Effective Portion)	
Millions of dollars		**Location**	**Amount**
Year Ended December 31, 2014			
Interest rate contracts	$ (9)	Interest expense	$ (3)
Year Ended December 31, 2013			
Interest rate contracts	$ 106	Interest expense	$ (3)
Year Ended December 31, 2012			
Interest rate contracts	$ 84	Interest expense	$ (3)

As of December 31, 2014, Consolidated SCE&G expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from cash flow hedges designated as hedging instruments will include approximately $2.3 million as an increase to interest expense assuming financial markets remain at their current levels.

Hedge Ineffectiveness

Other gains (losses) recognized in income representing ineffectiveness on interest rate hedges designated as cash flow hedges were insignificant for all periods presented.

Derivatives Not Designated as Hedging Instruments	Loss Recognized in Income	Year Ended December 31,		
Millions of dollars	Location	2014	2013	2012
Commodity contracts	Gas purchased for resale	—	—	$ (1)

Millions of dollars	Gain or (Loss) Deferred in Regulatory Accounts	Gain Reclassified from Deferred Accounts into Income	
		Location	Amount
Year Ended December 31, 2014			
Interest rate contracts	$ (352)	Other income	$ 64
Year Ended December 31, 2013			
Interest rate contracts	39	Other income	50
Year Ended December 31, 2012			
Interest rate contracts	—	Other income	—

The gains reclassified to other income offset revenue reductions as previously described herein and in Note 2.

As of December 31, 2014, Consolidated SCE&G expects that during the next twelve months reclassifications from regulatory accounts to earnings arising from interest rate swaps not designated as cash flow hedges will include approximately $5.2 million as an increase to other income.

Credit Risk Considerations

Consolidated SCE&G limits credit risk in its derivatives activities by assessing the creditworthiness of potential counterparties before entering into transactions with them and continuing to evaluate their creditworthiness on an ongoing basis. In this regard, Consolidated SCE&G uses credit ratings provided by credit rating agencies and current market-based qualitative and quantitative data, as well as financial statements, to assess the financial health of counterparties on an ongoing basis. Consolidated SCE&G uses standardized master agreements which generally include collateral requirements. These master agreements permit the netting of cash flows associated with a single counterparty. Cash, letters of credit and parental/affiliate guarantees may be obtained as security from counterparties in order to mitigate credit risk. The collateral agreements require a counterparty to post cash or letters of credit in the event an exposure exceeds the established threshold. The threshold represents an unsecured credit limit which may be supported by a parental/affiliate guaranty, as determined in accordance with Consolidated SCE&G's credit policies and due diligence. In addition, collateral agreements allow for the termination and liquidation of all positions in the event of a failure or inability to post collateral.

Certain of Consolidated SCE&G’s derivative instruments contain contingent provisions that require Consolidated SCE&G to provide collateral upon the occurrence of specific events, primarily credit rating downgrades. As of December 31, 2014 and 2013, Consolidated SCE&G had posted $107.1 million and $1.5 million, respectively, of collateral related to derivatives with contingent provisions that were in a net liability position. Collateral related to the positions expected to close in the next 12 months are recorded in Other Current Assets on the consolidated balance sheets. Collateral related to the noncurrent positions is recorded in Other within Deferred Debits and Other Assets on the consolidated balance sheets. If all of the contingent features underlying these instruments had been fully triggered as of December 31, 2014 and 2013, Consolidated SCE&G would have been required to post an additional $125.9 million and $- million, respectively, of collateral to its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net liability position as of December 31, 2014 and 2013, are $233.0 million and $1.0 million, respectively.

In addition, as of December 31, 2014 and December 31, 2013, Consolidated SCE&G has collected no cash collateral related to interest rate derivatives with contingent provisions that are in a net asset position. If all the contingent features underlying these instruments had been fully triggered as of December 31, 2014 and December 31, 2013, Consolidated SCE&G could request $- million and $31.7 million, respectively, of cash collateral from its counterparties. The aggregate fair value of all derivative instruments with contingent provisions that are in a net asset position as of December 31, 2014 and December 31, 2013 is $- million and $31.7 million, respectively.

Information related to Consolidated SCE&G's offsetting derivative assets and liabilities follows:

Offsetting Derivative Assets

Millions of dollars	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Financial Position	Net Amounts Presented in the Statement of Financial Position	Gross Amounts Not Offset in the Statement of Financial Position: Financial Instruments	Gross Amounts Not Offset in the Statement of Financial Position: Cash Collateral Received	Net Amount
As of December 31, 2014

7. FAIR VALUE MEASUREMENTS, INCLUDING DERIVATIVES

Consolidated SCE&G's interest rate swap agreements are valued using discounted cash flow models with independently sourced data. Fair value Level 2 measurements were as follows:

Millions of dollars	**As of December 31, 2014** **Level 2**	**As of December 31, 2013** **Level 2**
Assets-Interest rate contracts	—	$ 32
Liabilities-Interest rate contracts	$ 233	2

There were no Level 1 or Level 3 fair value measurements for either period presented and there were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during the periods presented.

Financial instruments for which the carrying amount may not equal estimated fair value at December 31, 2014 and December 31, 2013 were as follows:

	As of December 31, 2014		As of December 31, 2013	
Millions of dollars	**Carrying Amount**	**Estimated Fair Value**	**Carrying Amount**	**Estimated Fair Value**
Long-term debt	$ 4,308.6	$ 5,070.9	$ 4,054.9	$ 4,433.0

Fair values of long-term debt instruments are based on net present value calculations using independently sourced market data that incorporate a developed discount rate using similarly rated long-term debt, along with benchmark interest rates. As such, the aggregate fair values presented above are considered to be Level 2. Early settlement of long-term debt may not be possible or may not be considered prudent.

Carrying values of short-term borrowings approximate their fair values, which are based on quoted prices from dealers in the commercial paper market. These fair values are considered to be Level 2.

8. EMPLOYEE BENEFIT PLANS AND EQUITY COMPENSATION PLAN

Pension and Other Postretirement Benefit Plans

SCE&G participates in SCANA's noncontributory defined benefit pension plan, which covers substantially all regular, full-time employees hired before January 1, 2014. Benefits are no longer offered to employees hired or rehired after December 31, 2013, and pension benefits for existing participants will no longer accrue for services performed or compensation earned after December 31, 2023. SCANA's policy has been to fund the plan as permitted by applicable federal income tax regulations, as determined by an independent actuary.

SCANA's pension plan provides benefits under a cash balance formula for employees hired before January 1, 2000 who elected that option and for all eligible employees hired subsequently. Under the cash balance formula, benefits accumulate as a result of compensation credits and interest credits. Employees hired before January 1, 2000 who elected to remain under the final average pay formula earn benefits based on years of credited service and the employee's average annual base earnings received during the last three years of employment. Benefits under the cash balance formula and the final average pay formula will continue to accrue through December 31, 2023, after which date no benefits will be accrued except that participants under the cash balance formula will continue to earn interest credits.

In addition to pension benefits, SCE&G participates in SCANA's unfunded postretirement health care and life insurance programs which provide benefits to certain active and retired employees. Retirees hired before January 1, 2011 share in a portion of their medical care cost. Employees hired after December 31, 2010 are responsible for the full costs of retiree medical benefits elected by them. The costs of postretirement benefits other than pensions are accrued during the years the employees render the services necessary to be eligible for these benefits.

The same benefit formula applies to all SCANA subsidiaries participating in the parent sponsored plans and, with regard to the pension plan, there are no legally separate asset pools. The postretirement benefit plans are accounted for as multiple employer plans. The information presented below reflects Consolidated SCE&G's portion of the obligations, assets, funded status, net periodic benefit costs, and other information reported for the parent sponsored plans as a whole. The tabular data presented reflects the use of various cost assignment methodologies and participation assumptions based on Consolidated SCE&G's past and current employees and its share of plan assets.

Changes in Benefit Obligations

The measurement date used to determine pension and other postretirement benefit obligations is December 31. Data related to the changes in the projected benefit obligation for pension benefits and the accumulated benefit obligation for other postretirement benefits are presented below.

	Pension Benefits		Other Postretirement Benefits	
Millions of dollars	**2014**	**2013**	**2014**	**2013**
Benefit obligation, January 1	$ 695.7	$ 788.4	$ 181.7	$ 206.0
Service cost	16.0	17.6	3.6	4.6
Interest cost	34.1	32.6	9.4	8.7
Plan participants' contributions	—	—	1.8	2.0
Actuarial (gain) loss	82.7	(70.7)	18.6	(27.3)
Benefits paid	(54.8)	(50.6)	(9.6)	(9.3)
Curtailment	—	(21.6)	—	—
Amounts funded to parent	—	—	(1.4)	(3.0)
Benefit obligation, December 31	$ 773.7	$ 695.7	$ 204.1	$ 181.7

The accumulated benefit obligation for pension benefits was $747.6 million at the end of 2014 and $673.2 million at the end of 2013. The accumulated pension benefit obligation differs from the projected pension benefit obligation above in that it reflects no assumptions about future compensation levels.

Significant assumptions used to determine the above benefit obligations are as follows:

Pension Benefits		Other Postretirement Benefits	
2014	**2013**	**2014**	**2013**

Annual discount rate used to determine benefit obligation	4.20%	5.03%	4.30%	5.19%
Assumed annual rate of future salary increases for projected benefit obligation	3.00%	3.00%	3.00%	3.75%

A 7.0% annual rate of increase in the per capita cost of covered health care benefits was assumed for 2014. The rate was assumed to decrease gradually to 5.0% for 2020 and to remain at that level thereafter.

A one percent increase in the assumed health care cost trend rate would increase the postretirement benefit obligation by $0.9 million at December 31, 2014 and by $1.0 million at December 31, 2013. A one percent decrease in the assumed health care cost trend rate would decrease the postretirement benefit obligation by $0.8 million at December 31, 2014 and by $0.9 million at December 31, 2013.

Funded Status

Millions of Dollars	**Pension Benefits**		**Other Postretirement Benefits**	
December 31,	**2014**	**2013**	**2014**	**2013**
Fair value of plan assets	$ 783.6	$ 792.1	—	—
Benefit obligation	773.7	695.7	$ 204.1	$ 181.7
Funded status	$ 9.9	$ 96.4	$ (204.1)	$ (181.7)

Amounts recognized on the consolidated balance sheets were as follows:

Millions of Dollars	**Pension Benefits**		**Other Postretirement Benefits**	
December 31,	**2014**	**2013**	**2014**	**2013**
Current liability	—	—	$ (8.5)	$ (7.8)
Noncurrent asset	$ 9.9	$ 96.4	—	—
Noncurrent liability	—	—	(195.6)	(173.9)

Amounts recognized in accumulated other comprehensive loss (a component of common equity) as of December 31, 2014 and 2013 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2014	2013	2014	2013
Net actuarial loss	$ 1.9	$ 1.8	$ 1.0	$ 0.6
Prior service cost	0.1	0.2	—	—
Total	$ 2.0	$ 2.0	$ 1.0	$ 0.6

Amounts recognized in regulatory assets as of December 31, 2014 and 2013 were as follows:

Millions of Dollars	Pension Benefits		Other Postretirement Benefits	
December 31,	2014	2013	2014	2013
Net actuarial loss	$ 191.9	$ 107.7	$ 35.9	$ 20.1
Prior service cost	8.3	11.1	0.5	0.7
Total	$ 200.2	$ 118.8	$ 36.4	$ 20.8

In connection with the joint ownership of Summer Station, as of December 31, 2014 and 2013, SCE&G recorded within deferred debits $17.8 million and $14.1 million, respectively, attributable to Santee Cooper's portion of shared pension costs. As of December 31, 2014 and 2013, SCE&G also recorded within deferred debits $15.1 million and $12.6 million, respectively, from Santee Cooper, representing its portion of the unfunded postretirement benefit obligation.

Changes in Fair Value of Plan Assets

	Pension Benefits	
Millions of dollars	2014	2013
Fair value of plan assets, January 1	$ 792.1	$ 732.0
Actual return on plan assets	46.3	110.7
Benefits paid	(54.8)	(50.6)
Fair value of plan assets, December 31	$ 783.6	$ 792.1

Investment Policies and Strategies

The assets of the pension plan are invested in accordance with the objectives of (1) fully funding the obligations of the pension plan, (2) overseeing the plan's investments in an asset-liability framework that considers the funding surplus (or deficit) between assets and liabilities, and overall risk associated with assets as compared to liabilities, and (3) maintaining sufficient liquidity to meet benefit payment obligations on a timely basis. The pension plan is closed to new entrants effective January 1, 2014, and benefit accruals will cease effective January 1, 2024. In addition, during 2013, SCANA adopted a dynamic investment strategy for the management of the pension plan assets. The strategy will lead to a reduction in equities and an increase in long duration fixed income allocations over time with the intention of reducing volatility of funded status and pension costs in connection with the amendments to the plan.

The pension plan operates with several risk and control procedures, including ongoing reviews of liabilities, investment objectives, levels of diversification, investment managers and performance expectations. The total portfolio is constructed and maintained to provide prudent diversification with regard to the concentration of holdings in individual issues, corporations, or industries.

Transactions involving certain types of investments are prohibited. These include, except where utilized by a hedge fund manager, any form of private equity; commodities or commodity contracts (except for unleveraged stock or bond index futures and currency futures and options); ownership of real estate in any form other than publicly traded securities; short sales, warrants or margin transactions, or any leveraged investments; and natural resource properties. Investments made for the purpose of engaging in speculative trading are also prohibited.

The pension plan asset allocation at December 31, 2014 and 2013 and the target allocation for 2015 are as follows:

	Percentage of Plan Assets		
	Target Allocation	At December 31,	
Asset Category	**2015**	**2014**	**2013**
Equity Securities	58%	57%	59%
Fixed Income	33%	34%	32%
Hedge Funds	9%	9%	9%

For 2015, the expected long-term rate of return on assets will be 7.50%. In developing the expected long-term rate of return assumptions, management evaluates the pension plan's historical cumulative actual returns over several periods, considers the expected active returns across various asset classes and assumes an asset allocation of 58% with equity managers, 33% with fixed income managers and 9% with hedge fund managers. Management regularly reviews such allocations and periodically rebalances the portfolio when considered appropriate. Additional rebalancing may occur subject to funded status improvements as part of the dynamic investment strategy adopted for 2013.

Fair Value Measurements

Assets held by the pension plan are measured at fair value as described below. Assets are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. At December 31, 2014 and 2013, fair value measurements, and the level within the fair value hierarchy in which the measurements fall, were as follows:

	Fair Value Measurements at Reporting Date Using						
Millions of dollars	**Total**	**Level 2**	**Level 3**	**Total**	**Level 1**	**Level 2**	**Level 3**
	December 31, 2014			*December 31, 2013*			
Common stock	—	—	—	$ 302	$ 302	—	—
Preferred stock	—	—	—	1	1	—	—
Mutual funds	$ 566	$ 566	—	278	18	$ 260	—
Short-term investment vehicles	18	18	—	18	—	18	—
US Treasury securities	6	6	—	30	—	30	—
Corporate debt securities	78	78	—	48	—	48	—
Loans secured by mortgages	—	—	—	11	—	11	—
Municipals	14	14	—	3	—	3	—
Limited partnerships	29	29	—	32	1	31	—
Multi-strategy hedge funds	73	—	$ 73	69	—	—	$ 69
	$ 784	$ 711	$ 73	$ 792	$ 322	$ 401	$ 69

At December 31, 2014, assets with fair value measurements classified as Level 1 were insignificant. There were no transfers of fair value amounts into or out of Levels 1, 2 or 3 during 2014 or 2013.

The pension plan values common stock, preferred stock and certain mutual funds, where applicable, using unadjusted quoted prices from a national stock exchange, such as NYSE and NASDAQ, where the securities are actively traded. Other mutual funds, common collective trusts and limited partnerships are valued using the observable prices of the underlying fund assets based on trade data for identical or similar securities or from a national stock exchange for similar assets or broker quotes. Short-term investment vehicles are funds that invest in short-term fixed income instruments and are valued using observable prices of the underlying fund assets based on trade data for identical or similar securities. Government agency securities are valued using quoted market prices or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Corporate debt securities and municipals are valued based on recently executed transactions, using quoted market prices, or based on models using observable inputs from market sources such as external prices or spreads or benchmarked thereto. Loans secured by mortgages are valued using observable prices based on trade data for identical or comparable instruments. Hedge funds represent investments in a hedge fund of funds partnership that invests directly in multiple hedge fund strategies that are not traded on exchanges and do not trade on a daily basis. The fair value of this multi-strategy hedge fund is estimated based on the net asset value of the underlying hedge fund strategies using consistent valuation guidelines that account for variations that may impact their fair value. The estimated fair value is the price at which redemptions and subscriptions occur.

	Fair Value Measurements Level 3	
Millions of dollars	**2014**	**2013**
Beginning Balance	$ 69	$ 64
Unrealized gains included in changes in net assets	4	5
Purchases, issuances, and settlements	—	—
Ending Balance	$ 73	$ 69

Expected Cash Flows

The total benefits expected to be paid from the pension plan or from SCE&G's assets for the other postretirement benefits plan (net of participant contributions), respectively, are as follows:

Expected Benefit Payments

Millions of dollars	**Pension Benefits**	**Other Postretirement Benefits**
2015	$ 63.4	$ 9.1
2016	64.5	9.8
2017	65.6	10.4
2018	66.1	10.9
2019	65.1	11.5
2020 - 2024	338.4	64.6

Pension Plan Contributions

The pension trust is adequately funded under current regulations. No contributions have been required since 1997, and as a result of closing the plan to new entrants and freezing benefit accruals in the future, SCE&G does not anticipate making significant contributions to the pension plan for the foreseeable future.

Net Periodic Benefit Cost

SCE&G records net periodic benefit cost utilizing beginning of the year assumptions. Disclosures required for these plans are set forth in the following tables.

Components of Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**
Service cost	$ 16.0	$ 17.6	$ 15.7	$ 3.6	$ 4.6	$ 3.7
Interest cost	34.1	32.6	36.4	9.4	8.7	9.4
Expected return on assets	(56.3)	(51.9)	(50.4)	n/a	n/a	n/a
Prior service cost amortization	3.5	5.0	6.0	0.3	0.6	0.7
Amortization of actuarial losses	4.0	14.3	15.6	—	2.6	1.1
Curtailment	—	8.4	—	—	—	—
Net periodic benefit cost	$ 1.3	$ 26.0	$ 23.3	$ 13.3	$ 16.5	$ 14.9

In connection with regulatory orders, in 2013 SCE&G began recovering current pension expense through a rate rider that may be adjusted annually (for retail electric operations) or through cost of service rates (for gas operations). SCE&G is amortizing previously deferred pension costs as further described in Note 2.

Other changes in plan assets and benefit obligations recognized in other comprehensive income (net of tax) were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2014	2013	2012	2014	2013	2012
Current year actuarial (gain) loss	$ 0.2	$ (0.8)	$ 0.4	$ 0.4	$ (0.4)	$ 0.7
Amortization of actuarial losses	(0.1)	(0.1)	(0.1)	—	(0.1)	—
Amortization of prior service cost	(0.1)	—	(0.1)	—	—	(0.1)
Total recognized in OCI	$ —	$ (0.9)	$ 0.2	$ 0.4	$ (0.5)	$ 0.6

Other changes in plan assets and benefit obligations recognized in regulatory assets were as follows:

	Pension Benefits			Other Postretirement Benefits		
Millions of dollars	2014	2013	2012	2014	2013	2012
Current year actuarial (gain) loss	$ 87.7	$ (137.1)	$ 37.9	$ 15.8	$ (24.4)	$ 25.7
Amortization of actuarial losses	(3.5)	(12.7)	(14.0)	—	(2.2)	(1.0)
Amortization of prior service cost	(2.8)	(4.5)	(5.7)	(0.2)	(0.5)	(0.7)
Prior service cost (credit)	—	(7.7)	—	—	—	—
Amortization of transition obligation	—	—	—	—	(0.1)	(0.2)
Total recognized in regulatory assets	$ 81.4	$ (162.0)	$ 18.2	$ 15.6	$ (27.2)	$ 23.8

Significant Assumptions Used in Determining Net Periodic Benefit Cost

	Pension Benefits			Other Postretirement Benefits		
	2014	2013	2012	2014	2013	2012
Discount rate	5.03%	4.10%/5.07%	5.25%	5.19%	4.19%	5.35%
Expected return on plan assets	8.00%	8.00%	8.25%	n/a	n/a	n/a
Rate of compensation increase	3.00%	3.75%/3.00%	4.00%	3.75%	3.75%	4.00%
Health care cost trend rate	n/a	n/a	n/a	7.40%	7.80%	8.20%
Ultimate health care cost trend rate	n/a	n/a	n/a	5.00%	5.00%	5.00%
Year achieved	n/a	n/a	n/a	2020	2020	2020

Net periodic benefit cost for the period through September 1, 2013, was determined using a 4.10% discount rate, and net periodic benefit cost after that date was determined using a 5.07% discount rate. Similarly, estimated rates of compensation increase were changed in connection with the September 1, 2013 remeasurement.

The actuarial loss and prior service cost to be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2015 are insignificant.

The estimated amounts to be amortized from regulatory assets into net periodic benefit cost in 2015 are as follows:

Millions of Dollars	Pension Benefits	Other Postretirement Benefits
Actuarial loss	$ 10.6	$ 1.6
Prior service cost	3.1	0.2
Total	$ 13.7	$ 1.8

Other postretirement benefit costs are subject to annual per capita limits pursuant to the plan's design. As a result, the effect of a one-percent increase or decrease in the assumed health care cost trend rate on total service and interest cost is not significant.

Stock Purchase Savings Plan

SCE&G participates in a SCANA-sponsored defined contribution plan in which eligible employees may defer up to 75% of eligible earnings subject to certain limits and may diversify their investments. Employee deferrals are fully vested and nonforfeitable at all times. SCE&G provides 100% matching contributions up to 6% of an employee's eligible earnings. Total matching contributions made to the plan were $20.7 million in 2014, $18.7 million in 2013 and $17.7 million in 2012 and were made in the form of SCANA common stock.

9. SHARE-BASED COMPENSATION

SCE&G participates in the LTECP which provides for grants of nonqualified and incentive stock options, stock appreciation rights, restricted stock, performance shares, performance units and restricted stock units to certain key employees and non-employee directors. The LTECP currently authorizes the issuance of up to five million shares of SCANA's common stock, no more than one million of which may be granted in the form of restricted stock.

Compensation cost is measured based on the grant-date fair value of the instruments issued and is recognized over the period that an employee provides service in exchange for the award. Share-based payment awards do not have non-forfeitable rights to dividends or dividend equivalents. To the extent that the awards themselves do not vest, dividends or dividend equivalents which would have been paid on those awards do not vest.

Liability Awards

The 2012-2014, 2013-2015, and 2014-2016 performance cycles provide for performance measurement and award determination on an annual basis, with payment of awards being deferred until after the end of the three-year performance cycle. In each performance cycle, 20% of the performance award was granted in the form of restricted share units, which are liability awards payable in cash and are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to exceptions for retirement, death, disability or change in control. The remaining 80% of the award was granted in performance shares, which are subject to forfeiture in the event of termination of employment prior to the end of the cycle, subject to exceptions for retirement, death or disability. Each performance share has a value that is equal to, and changes with, the value of a share of SCANA common stock. Dividend equivalents are accrued on the performance shares and the restricted share units. Payouts of performance share awards are determined by SCANA's performance against pre-determined measures of TSR as compared to a peer group of utilities (weighted 50%) and growth in "GAAP-adjusted net earnings per share from operations" (weighted 50%).

Compensation cost of liability awards is recognized over their respective three-year performance periods based on the estimated fair value of the award, which is periodically updated based on expected ultimate cash payout, and is reduced by estimated forfeitures. Awards under the 2012-2014 performance cycle were paid in cash at SCANA's discretion in February 2015. Cash-settled liabilities related to the performance cycles were paid totaling approximately $1.9 million in 2014, $3.2 million in 2013 and $8.7 million in 2012.

Fair value adjustments for performance awards resulted in compensation expense recognized in the statements of income totaling approximately $12.6 million in 2014, $5.5 million in 2013 and $9.5 million in 2012. Fair value adjustments resulted in capitalized compensation costs of $0.6 million in 2014, $0.5 million in 2013 and $2.1 million in 2012.

10. COMMITMENTS AND CONTINGENCIES

Nuclear Insurance

Under Price-Anderson, SCE&G (for itself and on behalf of Santee-Cooper, a one-third owner of Summer Station Unit 1) maintains agreements of indemnity with the NRC that, together with private insurance, cover third-party liability arising from any nuclear incident occurring at the company's nuclear power plant. Price-Anderson provides funds up to $13.6 billion for public liability claims that could arise from a single nuclear incident. Each nuclear plant is insured against this liability to a maximum of $375 million by ANI with the remaining coverage provided by a mandatory program of deferred premiums that could be assessed, after a nuclear incident, against all owners of commercial nuclear reactors. Each reactor licensee is currently liable for up to $127.3 million per reactor owned for each nuclear incident occurring at any reactor in the United States, provided that not more than $18.9 million of the liability per reactor would be assessed per year. SCE&G's maximum assessment, based on its two-thirds ownership of Summer Station Unit 1, would be $84.8 million per incident, but not more than $12.6 million per year. Both the maximum assessment per reactor and the maximum yearly assessment are adjusted for inflation at least every five years.

SCE&G currently maintains insurance policies (for itself and on behalf of Santee Cooper) with NEIL. The policies provide coverage to Summer Station Unit 1 for property damage and outage costs up to $2.75 billion resulting from an event of nuclear origin. In addition, a builder's risk insurance policy has been purchased from NEIL for the construction of the New Units. This policy provides the owners of the New Units up to $500 million in limits of accidental property damage occurring during construction. The NEIL policies, in the aggregate, are subject to a maximum loss of $2.75 billion for any single loss occurrence. All of the NEIL policies permit retrospective assessments under certain conditions to cover insurer's losses. Based on the current annual premiums, SCE&G's portion of the retrospective premium assessment would not exceed $43.5 million

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station Unit 1 exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that SCE&G rates would not recover the cost of any purchased replacement power, SCE&G will retain the risk of loss as a self-insurer. SCE&G has no reason to anticipate a serious nuclear incident. However, if such an incident were to occur, it likely would have a material impact on the Consolidated SCE&G's results of operations, cash flows and financial position.

New Nuclear Construction

In 2008, SCE&G, on behalf of itself and as agent for Santee Cooper, contracted with the Consortium for the design and construction of the New Units at the site of Summer Station.

SCE&G's current ownership share in the New Units is 55%. As discussed below, under an agreement signed in January 2014 (and subject to customary closing conditions, including necessary regulatory approvals), SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper.

EPC Contract and BLRA Matters

The construction of the New Units and SCE&G's related recovery of financing costs through rates is subject to review and approval by the SCPSC as provided for in the BLRA. Under the BLRA, the SCPSC has approved, among other things, a milestone schedule and a capital costs estimates schedule for the New Units. This approval constitutes a final and binding determination that the New Units are used and useful for utility purposes, and that the capital costs associated with the New Units are prudent utility costs and expenses and are properly included in rates, so long as the New Units are constructed or are being constructed within the parameters of the approved milestone schedule, including specified contingencies, and the approved capital costs estimates schedule. Subject to the same conditions, the BLRA provides that SCE&G may apply to the SCPSC annually for an order to recover through revised rates SCE&G's weighted average cost of capital applied to all or part of the outstanding balance of construction work in progress concerning the New Units. Such annual rate changes are described in Note 2. As of December 31, 2014, SCE&G's investment in the New Units totaled $2.7 billion, for which the financing costs on $2.425 billion have been reflected in rates under the BLRA.

The SCPSC granted initial approval of the construction schedule, including 146 milestones within that schedule, and related forecasted capital costs in 2009. The NRC issued COLs in March 2012. In November 2012, the SCPSC approved an updated milestone schedule and additional updated capital costs for the New Units. In addition, the SCPSC approved revised substantial completion dates for the New Units based on that March 2012 issuance of the COL and the amounts agreed upon by SCE&G and the Consortium in July 2012 to resolve known claims by the Consortium for costs related to COL delays, design modifications of the shield building and certain prefabricated structural modules for the New Units and unanticipated rock conditions at the site. In December 2012, the SCPSC denied separate petitions filed by two parties requesting reconsideration of its order. On October 22, 2014, the South Carolina Supreme Court affirmed the SCPSC's order on appeal.

The substantial completion dates currently approved by the SCPSC for Units 2 and 3 are March 15, 2017 and May 15, 2018. The SCPSC also approved an 18-month contingency period beyond each of these dates, and for each of the 146 milestones in the schedule.

Since the settlement of delay-related claims in 2012, the Consortium has continued to experience delays in the schedule for fabrication and delivery of sub-modules for the New Units. The fabrication and delivery of sub-modules have been and remain focus areas of the Consortium, including sub-modules for module CA20, which is part of the auxiliary building, and CA01, which houses components inside the containment vessel. Modules CA20 and CA01, as well as shield building modules, are considered critical path items for both New Units. CA20 was placed on the nuclear island of Unit 2 in May 2014.

The delivery schedule of sub-modules for CA01 is expected to support completion of on-site fabrication to allow it to be ready for placement on the nuclear island of Unit 2 during the first half of 2015.

During the fourth quarter of 2013, the Consortium began a full re-baselining of the Unit 2 and Unit 3 construction schedules to incorporate a more detailed evaluation of the engineering and procurement activities necessary to accomplish the schedules and to provide a detailed reassessment of the impact of the revised Unit 2 and Unit 3 schedules on engineering and design resource allocations, procurement, construction work crew efficiencies, and other items. The intended result will be a revised fully integrated project schedule with timing of specific construction activities along with detailed information on budget, cost and cash flow requirements. While this detailed re-baselining of construction schedules has not been completed, in August 2014, SCE&G received preliminary information in which the Consortium has indicated that the substantial completion of Unit 2 was expected to occur in late 2018 or the first half of 2019 and that the substantial completion of Unit 3 may be approximately 12 months later.

During the third quarter of 2014, the Consortium also provided preliminary cost estimates for Units 2 and 3, principally related to delays for non-firm and non-fixed scopes of work to achieve a late 2018 substantial completion date for Unit 2 and a substantial completion date for Unit 3 approximately 12 months later. SCE&G's 55% portion of this preliminary estimate is approximately $660 million, excluding any owner's cost amounts associated with the delays, which could be $10 million per month for delays beyond the current SCPSC-approved substantial completion dates. This figure is presented in 2007 dollars and would be subject to escalation, which could be material. Further, this figure does not reflect consideration of the liquidated damages provisions of the EPC Contract which would partly mitigate any such delay-related costs. The Consortium's preliminary schedule and the cost estimate information have not been accepted by SCE&G and are under review, and SCE&G cannot predict when a revised schedule and cost estimate will be resolved with the Consortium.

Since receiving the August 2014 preliminary information, SCE&G has worked with Consortium executive management to evaluate this information. Based upon this evaluation, the Consortium now indicates that the substantial completion date of Unit 2 is expected to occur by June 2019 and that the substantial completion date of Unit 3 may be approximately 12 months later. SCE&G has not, however, accepted the Consortium's contention that the new substantial completion dates are made necessary by delays that are excusable under the EPC Contract. SCE&G is continuing discussions with Consortium executive management in order to identify potential mitigation strategies to possibly accelerate the substantial completion date of Unit 2 to a time earlier in the first half of 2019 or to the end of 2018, with Unit 3 following approximately 12 months later.

As discussed above, the milestone schedule approved by the SCPSC in November 2012 provides for 146 milestone dates, each of which is subject to an 18-month schedule contingency. As of December 31, 2014, 101 milestones have been completed. Three of the remaining milestones have not been or will not be completed within their 18-month contingency periods, and it is anticipated that the completion dates for a number of the other remaining milestone dates will also extend beyond their contingency periods. Further, capital costs (in 2007 dollars) and gross construction cost estimates (including escalation and AFC) are now projected to exceed amounts currently approved by the SCPSC of $4.548 billion and $5.755 billion, respectively. As such, in 2015 SCE&G, as provided for under the BLRA, expects to petition the SCPSC for an order to update the BLRA milestone schedule based on revised substantial completion dates for Units 2 and 3 of June 2019 and June 2020, respectively. In addition, that petition is expected to include certain updated owner's costs and other capital costs, including amounts within the Consortium's preliminary cost estimate which may be the subject of dispute. As such, the petition is not expected to reflect the resolution of the above described negotiations. The BLRA provides that the SCPSC shall grant the petition for modification if the record justifies a finding that the change is not the result of imprudence by SCE&G.

Additional claims by the Consortium or SCE&G involving the project schedule and budget may arise as the project continues. The parties to the EPC Contract have established both informal and formal dispute resolution procedures in order to resolve such issues. SCE&G expects to resolve all disputes (including any ultimate disagreements involving the preliminary cost estimates provided by the Consortium in the third quarter of 2014) through both the informal and formal procedures and anticipates that any costs that arise through such dispute resolution processes, as well as other costs identified from time to time, will be recoverable through rates.

Santee Cooper Matters

As noted above, SCE&G has agreed to acquire an additional 5% ownership in the New Units from Santee Cooper. Under the terms of this agreement, SCE&G will acquire a 1% ownership interest in the New Units at the commercial operation date of Unit 2, will acquire an additional 2% ownership interest no later than the first anniversary of such commercial operation date, and will acquire the final 2% no later than the second anniversary of such commercial operation date. SCE&G has agreed to pay an amount equal to Santee Cooper's actual cost of the percentage conveyed as of the date of each conveyance. In addition, the agreement provides that Santee Cooper will not transfer any of its remaining interest in the New Units to third parties until the New Units are complete. This transaction will not affect the payment obligations between the parties during construction for the New Units, nor is it anticipated that the payments for the additional ownership interest would be reflected in a revised rates filing under the BLRA. Based on the current milestone schedule and capital costs schedule approved by the SCPSC in November 2012, SCE&G’s estimated cost would be approximately $500 million for the additional 5% interest being acquired from Santee Cooper. This cost figure could be higher in light of the delays and related costs discussed above.

Nuclear Production Tax Credits

In August 2014, the IRS notified SCE&G that, subject to a national megawatt capacity limitation, the electricity to be produced by each of the New Units (advanced nuclear units, as defined) would qualify for nuclear production tax credits under Section 45J of the Internal Revenue Code to the extent that such New Unit is operational before January 1, 2021 and other eligibility requirements are met. Based on the above substantial completion dates provided by the Consortium of June 2019 and June 2020 for Units 2 and 3, respectively, both New Units are expected to be operational and to qualify for the nuclear production tax credits; however, further delays in the schedule or changes in tax law could impact such conclusions. To the extent that production tax credits are realized, their benefits are expected to be provided directly to SCE&G's electric customers as so realized.

Other Project Matters

When the NRC issued the COLs for the New Units, two of the conditions that it imposed were requiring inspection and testing of certain components of the New Units' passive cooling system, and requiring the development of strategies to respond to extreme natural events resulting in the loss of power at the New Units. In addition, the NRC directed the Office of New Reactors to issue to SCE&G an order requiring enhanced, reliable spent fuel pool instrumentation, as well as a request for information related to emergency plant staffing. SCE&G fulfilled the request related to emergency plant staffing in 2012. In addition, SCE&G prepared and submitted an integrated response plan for the New Units to the NRC in August 2013. That plan is currently under review by the NRC and SCE&G does not anticipate any additional regulatory actions as a result of that review, but it cannot predict future regulatory activities or how such initiatives would impact construction or operation of the New Units.

Environmental

Consolidated SCE&G's operations are subject to extensive regulation by various federal and state authorities in the areas of air quality, water quality, control of toxic substances and hazardous and solid wastes. Applicable statutes and rules include the CAA, CWA, Nuclear Waste Act and CERCLA, among others. In many cases, regulations proposed by such authorities could have a significant impact on Consolidated SCE&G's financial condition, results of operations and cash flows. In addition, Consolidated SCE&G often cannot predict what conditions or requirements will be imposed by regulatory or legislative proposals. To the extent that compliance with environmental regulations or legislation results in capital expenditures or operating costs, Consolidated SCE&G expects to recover such expenditures and costs through existing ratemaking provisions.

The EPA issued a revised carbon standard for new power plants by re-proposing NSPS under the CAA for emissions of carbon dioxide from newly constructed fossil fuel-fired units. The proposed rule was issued on January 8, 2014 and requires all new fossil fuel-fired power plants to meet the carbon dioxide emissions profile of a combined cycle natural gas plant. While most new natural gas plants will not be required to include any new technologies, no new coal-fired plants could be constructed without carbon capture and sequestration capabilities. Consolidated SCE&G is evaluating the proposed rule, but does not plan to construct new coal-fired units in the near future. In addition, on June 2, 2014, the EPA issued proposed emission guidelines for states to follow in developing plans to address GHG emissions from existing units. These guidelines are to be made final no later than June 1, 2015, and include state-specific rate based goals for carbon dioxide emissions.

From a regulatory perspective, SCE&G and GENCO continually monitor and evaluate their current and projected emission levels and strive to comply with all state and federal regulations regarding those emissions. SCE&G and GENCO participate in the sulfur dioxide and nitrogen oxide emission allowance programs with respect to coal plant emissions and also have constructed additional pollution control equipment at several larger coal-fired electric generating plants. Further, SCE&G is engaged in construction activities of the New Units which are expected to reduce GHG emission levels significantly once they are completed and dispatched by potentially displacing some of the current coal-fired generation sources. These actions are expected to address many of the rules and regulations discussed herein.

In July 2011, the EPA issued the CSAPR to reduce emissions of sulfur dioxide and nitrogen oxide from power plants in the eastern half of the United States. A series of court actions stayed this rule until October 23, 2014, when the Court of Appeals granted a motion to lift the stay. On December 3, 2014, the EPA published an interim final rule that aligns the dates in the CSAPR text with the revised court-ordered schedule, thus delaying the implementation dates to 2015 for Phase 1 and to 2017 for Phase 2. The CSAPR replaces the CAIR and requires a total of 28 states to reduce annual sulfur dioxide emissions and annual or ozone season nitrogen oxide emissions to assist in attaining the ozone and fine particle NAAQS. The rule establishes an emissions cap for sulfur dioxide and nitrogen oxide and limits the trading for emission allowances by separating affected states into two groups with no trading between the groups. Air quality control installations that SCE&G and GENCO have already completed have positioned them to comply with the allowances set by the CSAPR.

In April 2012, the EPA's MATS rule containing new standards for mercury and other specified air pollutants became effective. The rule provides up to four years for generating facilities to meet the standards, and SCE&G and GENCO's evaluation of the rule is ongoing. SCE&G's decision to retire certain coal-fired units or convert them to burn natural gas and its project to build the New Units (see Note 1) along with other actions are expected to result in SCE&G's compliance with MATS. On November 19, 2014, the EPA finalized its reconsideration of certain provisions applicable during startup and shutdown of generating facilities. SCE&G and GENCO have received a one year extension (until April 2016) to comply with MATS at the Cope, McMeekin, Wateree and Williams Stations. These extensions will allow time to convert McMeekin Station to burn natural gas and to install additional pollution control devices at the other plants that will enhance the control of certain MATS-regulated pollutants.

The CWA provides for the imposition of effluent limitations that require treatment for wastewater discharges. Under the CWA, compliance with applicable limitations is achieved under state-issued NPDES permits. As a facility's NPDES permit is renewed (every five years), any new effluent limitations would be incorporated. The ELG Rule was published in the Federal Register on June 7, 2013, and is expected to be finalized no later than September 30, 2015. Once the rule becomes effective, state regulators will modify facility NPDES permits to match more restrictive standards, thus requiring facilities to retrofit with new wastewater treatment technologies. Compliance dates will vary by type of wastewater, and some will be based on a facility's five year permit cycle and thus may range from 2018 to 2023. Based on the proposed rule, Consolidated SCE&G expects that wastewater treatment technology retrofits will be required at Williams and Wateree Stations and may be required at other facilities.

The CWA Section 316(b) Existing Facilities Rule became effective on October 14, 2014. This rule establishes national requirements for the location, design, construction and capacity of cooling water intake structures at existing facilities that reflect the best technology available for minimizing the adverse environmental impacts of impingement and entrainment. SCE&G and GENCO are conducting studies and implementing plans to ensure compliance with this rule. In addition, Congress is expected to consider further amendments to the CWA. Such legislation may include toxicity-based standards as well as limitations to mixing zones.

On December 19, 2014, the EPA issued a final rule for CCR, which is expected to become effective in 2015. This rule regulates CCR as a non-hazardous waste under Subtitle D of the Resource Conservation and Recovery Act. In addition, this rule imposes certain requirements on ash storage ponds at SCE&G's and GENCO's generating facilities. SCE&G and GENCO have already closed or have begun the process of closure of all of their ash storage ponds.

The Nuclear Waste Act required that the United States government accept and permanently dispose of high-level radioactive waste and spent nuclear fuel by January 31, 1998. The Nuclear Waste Act also imposed on utilities the primary responsibility for storage of their spent nuclear fuel until the repository is available. SCE&G entered into a Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the DOE in 1983. As of December 31, 2014, the federal government has not accepted any spent fuel from Summer Station Unit 1, and it remains unclear when the repository may become available. SCE&G has on-site spent nuclear fuel storage capability in its existing fuel pool until at least 2017 and is constructing a dry cask storage facility to accommodate the spent nuclear fuel output for the life of Summer Station Unit 1. SCE&G may evaluate other technology as it becomes available.

The provisions of CERCLA authorize the EPA to require the clean-up of hazardous waste sites. The state of South Carolina has similar laws. SCE&G maintains an environmental assessment program to identify and evaluate current and former operations sites that could require clean-up. In addition, regulators from the EPA and other federal or state agencies periodically notify SCE&G that it may be required to perform or participate in the investigation and remediation of a hazardous waste site. As site assessments are initiated, estimates are made of the amount of expenditures, if any, deemed necessary to investigate and remediate each site. These estimates are refined as additional information becomes available; therefore, actual expenditures may differ significantly from the original estimates. Amounts estimated and accrued to date for site assessments and clean-up relate solely to regulated operations. Such amounts are recorded in regulatory assets and amortized, with recovery provided through rates.

SCE&G is responsible for four decommissioned MGP sites in South Carolina which contain residues of by-product chemicals. These sites are in various stages of investigation, remediation and monitoring under work plans approved by DHEC and the EPA. SCE&G anticipates that major remediation activities at all these sites will continue until 2017 and will cost an additional $19.3 million, which is accrued in Other within Deferred Credits and Other Liabilities on the consolidated balance sheet. SCE&G expects to recover any cost arising from the remediation of MGP sites through rates. At December 31, 2014, deferred amounts, net of amounts previously recovered through rates and insurance settlements, totaled $35.5 million and are included in regulatory assets.

Claims and Litigation

Consolidated SCE&G is subject to various claims and litigation incidental to its business operations which management anticipates will be resolved without a material impact on Consolidated SCE&G's results of operations, cash flows or financial condition.

Operating Lease Commitments

Consolidated SCE&G is obligated under various operating leases for vehicles, office space, furniture and equipment. Leases expire at various dates through 2057. Rent expense totaled approximately $12.1 million in 2014, $13.6 million in 2013 and $9.6 million in 2012. Future minimum rental payments under such leases are as follows:

	Millions of dollars
2015	$ 6
2016	3
2017	1
2018	—
2019	1
Thereafter	18
Total	$ 29

Asset Retirement Obligations

Consolidated SCE&G recognizes a liability for the present value of an ARO when incurred if the liability can be reasonably estimated. Uncertainty about the timing or method of settlement of a conditional ARO is factored into the measurement of the liability when sufficient information exists, but such uncertainty is not a basis upon which to avoid liability recognition.

The legal obligations associated with the retirement of long-lived tangible assets that result from their acquisition, construction, development and normal operation relate primarily to Consolidated SCE&G's regulated utility operations. As of December 31, 2014, Consolidated SCE&G has recorded AROs of approximately $201 million for nuclear plant decommissioning (see Note 1) and AROs of approximately $335 million for other conditional obligations primarily related to generation, transmission and distribution properties, including gas pipelines. All of the amounts recorded are based upon estimates which are subject to varying degrees of imprecision, particularly since such payments will be made many years in the future.

A reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations is as follows:

Millions of dollars	2014	2013
Beginning balance	$ 547	$ 535
Liabilities incurred	3	5
Liabilities settled	(6)	(4)
Accretion expense	25	24
Revisions in estimated cash flows	(33)	(13)
Ending Balance	$ 536	$ 547

Revisions in estimated cash flows for 2014 primarily relate to lower estimates for certain environmental clean up obligations at generation facilities.

11. AFFILIATED TRANSACTIONS

CGT transports natural gas to SCE&G to serve retail gas customers and certain electric generation requirements. Such purchases totaled approximately $30.0 million in 2014, $33.3 million in 2013 and $35.9 million in 2012. SCE&G had approximately $3.3 million and $3.3 million payable to CGT for transportation services at December 31, 2014 and December 31, 2013, respectively. SCE&G had approximately $1.2 million and $1.3 million receivable from CGT for transportation services at December 31, 2014 and December 31, 2013, respectively.

SCE&G purchases natural gas and related pipeline capacity from SEMI to serve its retail gas customers and certain electric generation requirements. Such purchases totaled approximately $195.7 million in 2014, $166.9 million in 2013 and $125.5 million in 2012. SCE&G’s payables to SEMI for such purposes were $12.6 million and $12.5 million as of December 31, 2014 and 2013, respectively.

SCE&G owns 40% of Canadys Refined Coal, LLC which is involved in the manufacturing and selling of refined coal to reduce emissions. SCE&G accounts for this investment using the equity method. SCE&G’s receivable from this affiliate was $27.8 million at December 31, 2014 and $18.0 million at December 31, 2013. SCE&G’s payable to this affiliate was $27.9 million at December 31, 2014 and $18.0 million at December 31, 2013. SCE&G’s total purchases from this affiliate were $260.3 million in 2014 and $134.2 million in 2013. SCE&G’s total sales to this affiliate were $259.0 million in 2014 and $133.6 million in 2013.

SCANA Services provides the following services to Consolidated SCE&G, which are rendered at direct or allocated cost: information systems services, telecommunications services, customer services, marketing and sales, human resources, corporate compliance, purchasing, financial services, risk management, public affairs, legal services, investor relations, gas supply and capacity management, strategic planning, general administrative services and retirement benefits. In addition, SCANA Services processes and pays invoices for Consolidated SCE&G and is reimbursed. Costs for these services totaled $292.2 million in 2014, $285.6 million in 2013 and $305.6 million in 2012. Consolidated SCE&G's payables to SCANA Services for these services were $47.3 million and $49.1 million at December 31, 2014 and 2013, respectively.

Borrowings from and investments in an affiliated money pool are described in Note 4.

12. SEGMENT OF BUSINESS INFORMATION

Consolidated SCE&G’s reportable segments follow the same accounting policies as those described in Note 1.

Electric Operations primarily generates, transmits, and distributes electricity, and is regulated by the SCPSC and FERC. Gas Distribution purchases and sells natural gas, primarily at retail, and is regulated by the SCPSC.

Disclosure of Reportable Segments (Millions of dollars)

	Electric Operations	Gas Distribution	Adjustments/ Eliminations	Consolidated Total
2014				
External Revenue	$ 2,629	$ 462	—	$ 3,091
Operating Income	768	62	—	830
Interest Expense	19	—	$ 209	228
Depreciation and Amortization	300	27	(12)	315
Segment Assets	10,182	721	3,204	14,107
Expenditures for Assets	936	55	(57)	934
Deferred Tax Assets	11	n/a	(11)	—
2013				
External Revenue	$ 2,431	$ 414	—	$ 2,845
Operating Income	679	58	—	737
Interest Expense	19	—	$ 198	217
Depreciation and Amortization	294	26	(7)	313
Segment Assets	9,488	686	2,526	12,700
Expenditures for Assets	907	45	51	1,003
Deferred Tax Assets	10	n/a	(10)	—
2012				
External Revenue	$ 2,453	$ 356	—	$ 2,809
Operating Income	668	49	—	717
Interest Expense	21	—	$ 190	211
Depreciation and Amortization	278	25	(10)	293
Segment Assets	8,989	659	2,456	12,104
Expenditures for Assets	999	56	(77)	978
Deferred Tax Assets	9	n/a	(9)	—

Management uses operating income to measure segment profitability for regulated operations and evaluates utility plant, net, for its segments. As a result, Consolidated SCE&G does not allocate interest charges, income tax expense, earnings available to common shareholder or assets other than utility plant to its segments. Intersegment revenue and interest income were not significant. Consolidated SCE&G's deferred tax assets are netted with deferred tax liabilities for reporting purposes.

The consolidated financial statements report operating revenues which are comprised of the reportable segments. Revenues from non-reportable segments are included in Other Income. Segment Assets include utility plant, net for all reportable segments. As a result, adjustments to assets include non-utility plant and non-fixed assets for the segments. Adjustments to Interest Expense and Deferred Tax Assets include amounts that are not allocated to the segments. Expenditures for Assets are adjusted for revisions to estimated cash flows related to asset retirement obligations, and totals not allocated to other segments.

13. QUARTERLY FINANCIAL DATA (UNAUDITED)

Millions of dollars	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Annual
2014					
Total operating revenues	$ 859	$ 698	$ 812	$ 722	$ 3,091
Operating income	239	145	272	174	830
Net Income	126	99	157	76	458
Earnings Available to Common Shareholder	123	96	154	73	446
2013					
Total operating revenues	$ 728	$ 696	$ 776	$ 645	$ 2,845
Operating income	191	180	255	111	737
Net Income	92	88	139	72	391
Earnings Available to Common Shareholder	89	85	136	70	380

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not Applicable.

ITEM 9A. CONTROLS AND PROCEDURES

SCANA:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2014, SCANA conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of the effectiveness of the design and operation of SCANA's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934). Based on this evaluation, the CEO and CFO concluded that, as of December 31, 2014, SCANA's disclosure controls and procedures were effective.

Management's Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2014, SCANA conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of any change in SCANA's internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934) during the quarter ended December 31, 2014. There has been no change in SCANA's internal controls over financial reporting during the quarter ended December 31, 2014 that has materially affected or is reasonably likely to materially affect SCANA's internal control over financial reporting.

The Management Report on Internal Control over Financial Reporting follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCANA is responsible for establishing and maintaining adequate internal control over financial reporting. SCANA's internal control system was designed by or under the supervision of SCANA's management, including its CEO and CFO, to provide reasonable assurance to SCANA's management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCANA's management assessed the effectiveness of SCANA's internal control over financial reporting as of December 31, 2014. In making this assessment, SCANA used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control—Integrated Framework (2013)*. Based on this assessment, SCANA's management believes that, as of December 31, 2014, internal control over financial reporting is effective based on those criteria.

SCANA's independent registered public accounting firm has issued an attestation report on SCANA's internal control over financial reporting. This report follows.

ATTESTATION REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
SCANA Corporation
Cayce, South Carolina

We have audited the internal control over financial reporting of SCANA Corporation and subsidiaries (the "Company") as of December 31, 2014, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2014, of the Company and our report dated February 27, 2015, expressed an unqualified opinion on those financial statements and financial statement schedule.

/s/DELOITTE & TOUCHE LLP
Charlotte, North Carolina
February 27, 2015

SCE&G:

Evaluation of Disclosure Controls and Procedures:

As of December 31, 2014, SCE&G conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of the effectiveness of the design and operation of SCE&G's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934). Based on this evaluation, the CEO and CFO concluded that, as of December 31, 2014, SCE&G's disclosure controls and procedures were effective.

Management's Evaluation of Internal Control Over Financial Reporting:

As of December 31, 2014, SCE&G conducted an evaluation under the supervision and with the participation of its management, including its CEO and CFO, of any change in SCE&G's internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934) during the quarter ended December 31, 2014. There has been no change in SCE&G's internal controls over financial reporting during the quarter ended December 31, 2014 that has materially affected or is reasonably likely to materially affect SCE&G's internal control over financial reporting.

The Management Report on Internal Control over Financial Reporting follows.

MANAGEMENT REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of SCE&G is responsible for establishing and maintaining adequate internal control over financial reporting. SCE&G's internal control system was designed by or under the supervision of SCE&G's management, including its CEO and CFO, to provide reasonable assurance to SCE&G's management and board of directors regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, the effectiveness of the internal control over financial reporting may deteriorate in future periods due to either changes in conditions or declining levels of compliance with policies or procedures.

SCE&G's management assessed the effectiveness of SCE&G's internal control over financial reporting as of December 31, 2014. In making this assessment, SCE&G used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control-Integrated Framework (2013).* Based on this assessment, SCE&G's management believes that, as of December 31, 2014, internal control over financial reporting is effective based on those criteria.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

SCANA: A list of SCANA's executive officers is in Part I of this annual report at page 23. The other information required by Item 10 is incorporated herein by reference to the captions "INFORMATION ABOUT EXPERIENCE AND QUALIFICATION OF DIRECTORS AND NOMINEES," "NOMINEES FOR DIRECTORS," "CONTINUING DIRECTORS," "BOARD MEETINGS-COMMITTEES OF THE BOARD", "GOVERNANCE INFORMATION-SCANA's Code of Conduct & Ethics" and "OTHER INFORMATION-Section 16(a) Beneficial Ownership Reporting Compliance" in SCANA's definitive proxy statement for the 2015 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 11. EXECUTIVE COMPENSATION

SCANA: The information required by Item 11 is incorporated herein by reference to the captions "Compensation Committee Interlocks and Insider Participation," "Compensation Discussion and Analysis," Compensation Committee Report," "Summary Compensation Table," "2014 Grants of Plan-Based Awards," "Outstanding Equity Awards at 2014 Fiscal Year-End," "2014 Option Exercises and Stock Vested," "Pension Benefits," "2014 Nonqualified Deferred Compensation," and "Potential Payments Upon Termination or Change in Control," under the heading "EXECUTIVE COMPENSATION" and the heading "DIRECTOR COMPENSATION" in SCANA's definitive proxy statement for the 2015 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

SCE&G: Not applicable.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

SCANA: Information required by Item 12 is incorporated herein by reference to the caption "SHARE OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT" in SCANA's definitive proxy statement for the 2015 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA's fiscal year.

Equity securities issuable under SCANA's compensation plans at December 31, 2014 are summarized as follows:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
	(a)	(b)	(c)
Equity compensation plans approved by security holders:			
Long-Term Equity Compensation Plan	n/a	n/a	3,138,638
Non-Employee Director Compensation Plan	n/a	n/a	71,368
Equity compensation plans not approved by security holders	n/a	n/a	n/a
Total	n/a	n/a	3,210,006

SCE&G: Not applicable.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

SCANA: The information required by Item 13 is incorporated herein by reference to the captions “RELATED PARTY TRANSACTIONS” and “GOVERNANCE INFORMATION - Director Independence” in SCANA’s definitive proxy statement for the 2015 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities Exchange Act of 1934 within 120 days after the end of SCANA’s fiscal year.

SCE&G: Not applicable.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

SCANA: The information required by Item 14 is incorporated herein by reference to “PROPOSAL 3-APPROVAL OF THE APPOINTMENT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM” in SCANA’s definitive proxy statement for the 2015 annual meeting of shareholders which will be filed with the SEC pursuant to Regulation 14A, promulgated under the Securities and Exchange Act of 1934 within 120 days after the end of SCANA’s fiscal year.

SCE&G: The Audit Committee Charter requires the Audit Committee to pre-approve all auditing services and permitted non-audit services (including the fees and terms thereof) to be performed by the independent registered accounting firm. Pursuant to a policy adopted by the Audit Committee, its Chairman may pre-approve the rendering of services on behalf of the Audit Committee. Decisions by the Chairman to pre-approve the rendering of services are presented to the Audit Committee at its next scheduled meeting.

Independent Registered Public Accounting Firm’s Fees

The following table sets forth the aggregate fees, all of which were approved by the Audit Committee, charged to SCE&G and its consolidated affiliates for the fiscal years ended December 31, 2014 and 2013 by Deloitte & Touche LLP, the member firms of Deloitte Touche Tohmatsu, and their respective affiliates.

	2014	2013
Audit Fees (1)	$ 1,977,658	$ 1,972,696
Audit-Related Fees (2)	123,107	115,706
Total Fees	$ 2,100,765	$ 2,088,402

(1) Fees for audit services billed in 2014 and 2013 consisted of audits of annual financial statements, comfort letters, statutory and regulatory audits, consents and other services related to SEC filings, and accounting research.

(2) Fees primarily for employee benefit plan audits.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(a) The following documents are filed or furnished as a part of this Form 10-K:

(1) Financial Statements and Schedules:

The Report of Independent Registered Public Accounting Firm on the financial statements for each of SCANA and SCE&G is listed under Item 8 herein.

The financial statements and supplementary financial data filed as part of this report for SCANA and SCE&G are listed under Item 8 herein.

The financial statement schedules "Schedule II - Valuation and Qualifying Accounts" filed as part of this report for SCANA and SCE&G are included below.

(2) Exhibits

Exhibits required to be filed or furnished with this Annual Report on Form 10-K are listed in the Exhibit Index following the signature page. Certain of such exhibits which have heretofore been filed with the SEC and which are designated by reference to their exhibit number in prior filings are incorporated herein by reference and made a part hereof.

Pursuant to Rule 15d-21 promulgated under the Securities Exchange Act of 1934, the annual report for SCANA's employee stock purchase plan will be furnished under cover of Form 11-K to the SEC when the information becomes available.

As permitted under Item 601(b)(4)(iii) of Regulation S-K, instruments defining the rights of holders of long-term debt of less than 10% of the total consolidated assets of SCANA, for itself and its subsidiaries and of SCE&G, for itself and its consolidated affiliates, have been omitted and SCANA and SCE&G agree to furnish a copy of such instruments to the SEC upon request.

Schedule II—Valuation and Qualifying Accounts
(in millions)

Description		Beginning Balance	Additions: Charged to Income	Additions: Charged to Other Accounts	Deductions from Reserves	Ending Balance
SCANA:						
Reserves deducted from related assets on the balance sheet:						
Uncollectible accounts						
	2014	$ 6	$ 16	—	$ 15	$ 7
	2013	7	13	—	14	6
	2012	6	14	—	13	7
Reserves other than those deducted from assets on the balance sheet:						
Reserve for injuries and damages						
	2014	$ 6	$ 7	—	$ 8	$ 5
	2013	6	4	—	4	6
	2012	6	4	—	4	6
SCE&G:						
Reserves deducted from related assets on the balance sheet:						
Uncollectible accounts						
	2014	$ 3	$ 8	—	$ 7	$ 4

SCANA CORPORATION

EXECUTIVE DEFERRED COMPENSATION PLAN

SECTION 1. ESTABLISHMENT AND PURPOSE

1 . 1 Establishment and History of the Plan. SCANA Corporation established, effective as of January 1, 1987, the supplementary voluntary deferred compensation plan for executives known as the "SCANA Corporation Supplementary Voluntary Deferral Plan" (the "SVDP"). SCANA Corporation also established: (1) effective as of October 15, 1986, a deferred compensation plan for executives known as the "SCANA Corporation Voluntary Deferral Plan" (the "VDP"); and (2) effective as of December 18, 1996, a consolidated deferred compensation plan for selected executives known as the "SCANA Corporation Key Employee Retention Program" ("KERP"), which was a consolidation of various individual agreements with executives, previously established. The VDP, KERP, and SVDP have been amended from time to time after their initial adoption for various design and administrative changes. Further, the VDP, KERP, and SVDP were amended and restated effective as of December 18, 1996 to include provisions applicable upon a Change in Control. The VDP, KERP, and SVDP were further amended and restated effective as of October 21, 1997 to include various administrative provisions and to clarify certain provisions regarding a Change in Control.

Effective as of July 1, 2000, the KERP was amended to provide a cash balance-type benefit for all participants. Effective as of July 1, 2001, the KERP and VDP were amended and merged with and into this Plan, which was re-named as the "SCANA Corporation Executive Deferred Compensation Plan" (hereinafter called the "Plan"). Effective as of January 1, 2002, the KERP cash balance-type benefit was frozen and this Plan was amended and restated to include new deferral opportunities as set forth herein. Effective as of January 1, 2004, this Plan was amended and restated to incorporate certain amendments and other design based changes. Effective as of January 1, 2007, this Plan was amended and restated to eliminate gross-up payments. Effective as of January 1, 2009, this Plan was amended and restated to comply with the requirements of Code Section 409A. Effective as of December 31, 2009, this Plan is amended and restated to remove references to the SCANA Corporation Key Executive Severance Benefits Plan. This Plan was most recently amended and restated, effective as of November 25, 2014, to allow for participation of non-employee directors of the Corporation in the Plan.

1.2 Description of the Plan. This Plan is intended to constitute a non-qualified deferred compensation plan which, in accordance with ERISA Sections 201(2), 301(a)(3) and 401(a)(1), is unfunded and established primarily for the purpose of providing deferred compensation for a select group of management or highly compensated employees.

1.3 Purpose of the Plan. The purpose of this Plan is to:

(a) enable the Company to attract and retain persons of outstanding competence, to provide incentive benefits to a very select group of key management employees who contribute materially to the continued growth, development, and future business success of the Company, and to provide a means whereby certain amounts payable by the Company to selected executives may be deferred to some future period; and

(b) provide a means whereby certain amounts payable by the Corporation to selected non-employee directors of the Corporation may be deferred to some future period.

1.4 Effective Date. This amended and restated Plan is effective as of November 25, 2014, except as otherwise specifically provided herein (including in the appendices to the Plan) or in resolutions adopted by the Board or the Committee.

SECTION 2. DEFINITIONS

2 . 1 Definitions. Whenever used herein, the following terms shall have the meanings set forth below, unless otherwise expressly provided herein or unless a different meaning is plainly required by the context, and when the defined meaning is intended, the term is capitalized:

(a) "Additional Deferral" means the pre-tax deferrals of Excess Compensation made by a Participant who is an Eligible Employee under this Plan of up to nineteen percent (19%) of his Excess Compensation in accordance with Section 4.1(b).

(b) "Agreement" means a contract between an Eligible Employee and the Company permitting the Eligible Employee to participate in the Plan and delineating the benefits (if any) that are to be provided to the Eligible Employee in lieu of or in addition to the benefits described under the terms of this Plan.

(c) "Basic Deferral" means the pre-tax deferrals of Excess Compensation made by a Participant who is an Eligible Employee under this Plan of up to six percent (6%) of his Excess Compensation in accordance with Section 4.1(a).

(d) "Beneficial Owner" shall have the meaning ascribed to such term in Rule 13d-3 of the General Rules and Regulations under the Exchange Act.

(e) "Beneficiary" means any person or entity who, upon the Participant's death, is entitled to receive the Participant's benefits under the Plan in accordance with Section 7 hereof.

(f) "Board" means the Board of Directors of the Corporation.

(g) "Bonus Deferral" means the pre-tax deferrals of a distribution of Performance Share Awards made by a Participant who is an Eligible Employee under this Plan of up to one hundred percent (100%) of his Performance Share Award in accordance with Section 4.1(c).

(h) "Cash Retainer Deferral" means the deferrals of Cash Retainer Fee amounts made by a Participant who is a Director under this Plan.

(i) "Change in Control" means a change in control of the Corporation of a nature that would be required to be reported in response to Item 6(e) of Schedule 14A of Regulation 14A promulgated under the Exchange Act, whether or not the Corporation is then subject to such reporting requirements; provided that, without limitation, such a Change in Control shall be deemed to have occurred if:

(i) Any Person (as defined in Section 3(a)(9) of the Exchange Act and used in Sections 13(d) and 14(d) thereof, including a "group" as defined in Section 13(d)) is or becomes the Beneficial Owner, directly or indirectly, of twenty five percent (25%) or more of the combined voting power of the outstanding shares of capital stock of the Corporation;

(ii) During any period of two (2) consecutive years (not including any period prior to December 18, 1996) there shall cease to be a majority of the Board comprised as follows: individuals who at the beginning of such period constitute the Board and any new director(s) whose election by the Board or nomination for election by the Corporation's stockholders was approved by a vote of at least two-thirds (2/3) of the directors then still in office who either were directors at the beginning of the period or whose election or nomination for election was previously so approved;

(iii) The consummation of a merger or consolidation of the Corporation with any other corporation, other than a merger or consolidation which would result in the voting shares of capital stock of the Corporation outstanding immediately prior thereto continuing to represent (either by remaining outstanding or by being converted into voting shares of capital stock of the surviving entity) at least eighty percent (80%) of the combined voting power of the voting shares of capital stock of the Corporation or such surviving entity outstanding immediately after such merger or consolidation; or the shareholders of the Corporation approve a plan of complete liquidation of the Corporation or an agreement for the sale or disposition by the Corporation of all or substantially all of the Corporation's assets; or

(iv) The consummation of the sale of the stock of any subsidiary of the Corporation designated by the Board as a "Material Subsidiary;" or the shareholders of the Corporation approve a plan of complete liquidation of a Material Subsidiary or an agreement for the sale or disposition by the Corporation of all or substantially all of the assets of a Material Subsidiary; provided that any event described in this subsection shall represent a Change in Control only with respect to a Participant who has been exclusively assigned to the affected Material Subsidiary.

(j) "Code" means the Internal Revenue Code of 1986, as amended.

(k) "Committee" means the Human Resources Committee of the Board. Any references in this Plan to the "Committee" shall be deemed to include references to the designee appointed by the Committee under Section 10.4.

(l) "Company" means the Corporation and any subsidiaries of the Corporation and their successor(s) or assign(s) that adopt this Plan through execution of Agreements with any of their Employees or otherwise. When the term "Company" is used with respect to an individual Participant who is an Eligible Employee, it shall refer to the specific company at which the Participant is employed, unless otherwise required by the context. When the term "Company" is used with respect to an individual Participant who is a Director, it shall refer to the Corporation.

(m) "Compensation" means the Eligible Earnings (as defined in the Qualified Plan) of a Participant who is an Employee, determined without regard to the limitation on compensation otherwise required under Code Section 401(a)(17), and without regard to any deferrals or the foregoing of compensation under this or any other plan of deferred compensation maintained by the Company.

(n) "Corporation" means SCANA Corporation, a South Carolina corporation, or any successor thereto.

(o) "Director" means an individual who is a member of the Board and who is designated as eligible to participate in this Plan by the Corporation under Section 3.1(b).

(p) "Director Plan" means the SCANA Corporation Director Compensation and Deferral Plan, as amended from time to time.

(q) "EDCP Ledger" means the bookkeeping ledger account used to track deferred amounts under the Plan together with credited earnings (or losses) that reflect the Investment Options applicable with respect to each Participant's deferred amounts. Each EDCP Ledger shall separately reflect the pre-2005 and post-2004 deferrals and hypothetical earnings thereon, and the portion of the post-2004 deferrals and hypothetical earnings thereon payable at a date certain and the portion payable upon a Participant's Separation from Service (referred to herein as a Participant's "pre-2005 EDCP Ledger" and "post-2004 EDCP Ledger"). A Participant's pre-2005 EDCP Ledger shall reflect amounts deferred hereunder before January 1, 2005 (and the earnings credited thereon before, on or after January 1, 2005) for which (i) the Participant had a legally binding right as of December 31, 2004, to be paid the amount, and (ii) such right to the amount was earned and vested as of December 31, 2004 and was credited to the Participant's EDCP Ledger hereunder. Pre-2005 EDCP Ledgers are treated as "grandfathered" for the purposes of Code Section 409A, and are governed by the terms of the Plan in effect as of October 3, 2004.

(r) "Eligible Employee" means an Employee who is eligible for awards under the SCANA Corporation Long-Term Equity Compensation Plan.

(s) "Employee" means a person who is actively employed by the Company and who falls under the usual common law rules applicable in determining the employer-employee relationship.

(t) "Employer Matching Deferral" means the deferrals credited to EDCP Ledgers for Participants who are Eligible Employees in accordance with Section 4.2.

(u) "ERISA" means the Employee Retirement Income Security Act of 1974, as amended.

(v) "Excess Compensation" means the Compensation otherwise payable to an Eligible Employee in excess of the dollar limitation imposed under Code Section 401(a)(17) (or such other dollar limitation as may be set by the Committee in its sole discretion for any Year).

(w) "Exchange Act" means the Securities Exchange Act of 1934, as amended.

(x) "Investment Options" means those hypothetical targeted investment options designated by the Committee as measurements of the rate of return to be credited to (or charged against) Participants' EDCP Ledgers.

(y) "Participant" means any Eligible Employee or Director who is participating in the Plan in accordance with the provisions herein set forth. If a Participant had previously deferred amounts credited to a EDCP Ledger and such Participant is no longer eligible to participate hereunder (for example, due to a Committee designation of his ineligibility), he shall be covered under this Plan as an inactive Participant. Except for those provisions related to deferral opportunities, references herein to a Participant shall be deemed to include references to such inactive Participants, unless otherwise required by the context.

(z) "Performance Share Award" means the amount payable from the Performance Share Award portion of the SCANA Corporation Long-Term Equity Compensation Plan to a Participant who is an Eligible Employee in a Year.

(aa) "Qualified Plan" means the SCANA Corporation Stock Purchase-Savings Plan, as amended from time to time.

(bb) "Retainer Fee" means the amount of compensation payable to a Director with respect to services rendered to the Corporation as a Director for a Year under the Director Plan. With respect to Retainer Fee amounts deferred by a Director under this Plan, the Corporation or its delegate shall designate a portion of the Retainer Fee as the "Stock Retainer Fee" and a portion of the Retainer Fee as the "Cash Retainer Fee."

(cc) "Separation from Service" means:

(i) with respect to an Employee, any termination of the employment relationship from the Company and any affiliates and, with respect to post-2004 EDCP Ledgers, any separation from service from the Company and its affiliates as determined in a manner consistent with Code Section 409A and the guidelines issued thereunder; and

(ii) with respect to a Director, any separation from service from the Company and its affiliates as determined in a manner consistent with Code Section 409A and the guidelines issued thereunder.

(dd) "Stock Retainer Deferral" means the deferrals of Cash Retainer Fee amounts made by a Participant who is a Director under this Plan.

(ee) "Year" means the calendar year.

2.2 Gender and Number. Except when otherwise indicated by the context, any masculine terminology used herein also shall include the feminine and the feminine shall include the masculine, and the use of any term herein in the singular may also include the plural and the plural shall include the singular.

SECTION 3. ELIGIBILITY AND PARTICIPATION

3.1 Eligibility.

(a) An Eligible Employee shall become eligible to participate in this Plan as follows:

(i) To be eligible to participate in this Plan for purposes of making Basic Deferrals or Additional Deferrals (and to benefit from Employer Matching Deferrals) for any Year, the Eligible Employee must earn Compensation during that Year in excess of the applicable dollar limitation on compensation under Code Section 401(a)(17) (or such other dollar limitation as may be set by the Committee in its sole discretion for any Year before the beginning of such Year) and the Eligible Employee must have elected to defer the maximum allowable pre-tax deferrals under the Qualified Plan for the Year.

(ii) Eligible Employees are automatically eligible to participate in this Plan for purposes of making Bonus Deferrals.

(b) A Director shall become eligible to participate in the Plan for purposes of making Cash Retainer Deferrals and Stock Retainer Deferrals upon his satisfaction of the Corporation's minimum share ownership guidelines applicable to Directors, as certified by the Board.

(c) All Eligible Employees and Directors will be required, as a condition of participation, to execute such written participation agreements as required by the Committee from time to time.

3.2 Participation. An Employee or Director who meets the eligibility requirements of Section 3.1 may become a Participant in this Plan by electing to defer a portion of his Excess Compensation, Performance Share Award or Retainer Fee, as applicable, on such form and in such manner as determined by the Committee pursuant to Section 4. Eligible Employees who are participants in the Qualified Plan may automatically be deemed to have elected to defer a portion of their Excess Compensation hereunder in accordance with Section 4.

3.3 Continued Participation. Once an Eligible Employee or Director becomes a Participant, he shall continue to be eligible to participate for all future years until his Separation from Service or death or unless and until the Committee shall designate that individual as ineligible to participate. If a Participant becomes ineligible to participate for future deferrals under this Plan, he shall retain all the rights described under this Plan with respect to deferrals previously made while an active Participant.

SECTION 4. DEFERRALS

4 . 1 Deferral Election for Eligible Employees. Subject to the conditions set forth in this Plan, a Participant who is an Eligible Employee may elect to defer amounts hereunder as follows:

(a) Basic Deferrals. An Eligible Employee may elect to defer Basic Deferrals under this Plan in whole percentages up to six percent (6%) of his Excess Compensation.

(b) Additional Deferrals. An Eligible Employee may elect to defer Additional Deferrals under this Plan in whole percentages up to nineteen percent (19%) of his Excess Compensation.

(c) Bonus Deferrals. An Eligible Employee may elect to defer under this Plan, in whole percentages, up to one hundred percent (100%) of his Performance Share Award otherwise payable for a Year, as a Bonus Deferral.

(d) Deferral Procedures for Basic and Additional Deferrals. Except as provided in Section 4.1(f), all elections under Section 4.1(a) and Section 4.1(b) must be made at such time and in such manner as specified by the Committee prior to the beginning of the Year in which such Excess Compensation is otherwise earned. The Committee is permitted but not required to establish deferral procedures pursuant to which Participants are eligible to make separate deferral elections with respect to base salary and short-term incentive awards. Once a Basic Deferral or Additional Deferral election is made (or deemed to be made) for a Year, it shall remain in effect for all future Excess Compensation otherwise payable in all future pay periods during that Year. Such election shall also remain in effect for future Years unless affirmatively changed by the Participant in accordance with the terms of the Plan and the procedures implemented hereunder prior to the beginning of such Year. Eligible Employee Basic Deferrals and Additional Deferrals shall be credited to the Participant's EDCP Ledger(s) at such times and in such manner as determined by the Committee, in its sole discretion, but no less frequently than monthly.

(e) Deferral Procedures for Bonus Deferrals. Elections made under Section 4.1(c) must be made no later than June 30 of the first Year of the three-Year award cycle established under the Performance Share Award portion of the SCANA Corporation Long-Term Equity Compensation Plan, and shall apply to the Participant's award that is otherwise payable, if at all, in the Year following the end of the three-Year award cycle; provided that in order to be eligible to make the election by such June 30 date, the Participant continuously performs services from the beginning of the performance period through the date on which the election is made. Any such Bonus Deferral election shall also apply with respect to awards payable in future Years of such three-Year award cycle unless affirmatively changed by the Participant in accordance with the procedures established by the Committee prior to June 30 of any of the Years in the three-Year award cycle applicable to such award with respect to which a change is requested. Any Bonus Deferral election shall also apply with respect to awards payable pursuant to future three-Year award cycles unless affirmatively changed by the Participant in accordance with the terms of the Plan and the procedures implemented hereunder prior to June 30 of the first Year of the future three-Year award cycle. Eligible Employee Bonus Deferrals shall be credited to the Participant's EDCP Ledger(s) in such manner as determined by the Committee, in its sole discretion, but no later than as of the last business day of the month following the month in which the Participant's Performance Share Award is otherwise payable.

(f) Deferral Procedures for Newly Eligible Employees. In the case of a person who first becomes an Eligible Employee during a Year (and is not eligible for any other plan with which this Plan is aggregated for purposes of Code Section 409A), elections under Section 4.1(a), 4.1(b), and 4.1(c) for such Year must be made within thirty (30) days of the date the Employee becomes an Eligible Employee, and shall apply only to amounts paid for services to be performed after the date of such election.

4.2 Deferral Election for Directors. Subject to the conditions set forth in this Plan, a Participant who is a Director may elect to defer amounts hereunder as follows:

(a) Cash Retainer Deferrals. A Director who has not elected to defer all or a portion of his Cash Retainer Fee amounts for a Year under the Director Plan may elect to defer Cash Retainer Deferrals under this Plan in whole percentages up to one hundred percent (100%) of his Cash Retainer Fee amounts for a Year.

(b) Stock Retainer Deferrals. A Director who has not elected to defer all or a portion of his Stock Retainer Fee amounts under the Director Plan for a Year may elect to defer Stock Retainer Deferrals under this Plan of one hundred percent (100%) of his Stock Retainer Fee amounts for a Year. For clarity, if a Director elects to defer Stock Retainer Fee amounts under this Plan for a Year, he must deferral all of his Stock Retainer Fee and may not defer less than one hundred percent (100%) of his Stock Retainer Fee amounts for such Year under this Plan.

(c) Deferral Procedures for Cash Retainer Deferrals and Stock Retainer Deferrals. All elections under Section 4.2(a) and 4.2(b) must be made at such time and in such manner as specified by the Committee prior to the beginning of the Year in which such Retainer Fee amounts are otherwise earned. The Committee is permitted but not required to establish deferral procedures pursuant to which Participants are eligible to make separate deferral elections with respect to Cash Retainer Fees and Stock Retainer Fees. Once a Cash Retainer Deferral or Stock Retainer Deferral election is made (or deemed to be made) for a Year, it shall remain in effect for all future Retainer Fees otherwise payable in all future periods during that Year. Such election shall also remain in effect for future Years unless affirmatively changed by the Participant in accordance with the terms of the Plan and the procedures implemented hereunder prior to the beginning of such Year. Director Cash Retainer Deferrals and Stock Retainer Deferrals shall be credited to the Participant's EDCP Ledger(s) at such times and in such manner as determined by the Committee, in its sole discretion, but no less frequently than quarterly.

4.3 Crediting of Employer Matching Deferrals. Any Participant who has elected to make a deferral under Section 4.1(a) or 4.1(b) for a Year will be credited with an Employer Matching Deferral for such Year of an amount equal to such deferral, provided that the total amount of a Participant's Employer Matching Deferral for any Year shall not exceed an amount equal to 6% of the Participant's Excess Compensation. Such Employer Matching Deferrals shall be credited to the Participant's "Separation from Service" EDCP Ledger at such times and in such manner as the Committee, in its sole discretion determines, but no less frequently than monthly.

4.4 Deferral Period. With respect to deferrals made in accordance with Section 4.1 or Section 4.2, each Participant may elect the deferral period for each separate deferral. Subject to the modification of deferral date provisions of Section 4.6 and the acceleration provisions of Section 6, (i) a Participant who is an Eligible Employee may elect to defer his Basic Deferrals, Additional Deferrals, and Bonus Deferrals until his Separation from Service or until a date certain; provided, however, that any post-2004 deferrals must have the same date certain; and (ii) a Participant who is a Director may elect to defer his Cash Retainer Deferrals and Stock Retainer Deferrals only until his Separation from Service. All deferrals are subject to the establishment of EDCP Ledgers in accordance with Section 5.1 and any additional limitations that the Committee in its sole discretion may choose to apply (which limitations shall be applied in accordance with Code Section 409A with respect to post-2004 EDCP Ledgers).

Notwithstanding any "date certain" deferral period election otherwise made by a Participant who is an Eligible Employee (or any modification thereof under Section 4.6), and except as otherwise provided in Section 4.5(b) in connection with a modification of the form of distribution for post-2004 EDCP Ledger(s), payments of deferred amounts hereunder shall be paid or begin to be paid as soon as practicable following the earliest to occur of:

(a) Death,

(b) "Disability," as defined by the long-term disability provisions of the SCANA Corporation Health and Disability Plan (but only for pre-2005 EDCP Ledgers), or

(c) Separation from Service for any reason, subject to the rules in Section 6.6 applicable to "specified employees."

4.5 Form of Payment of Deferred Amounts. At the same time as the election made pursuant to Section 4.1, Section 4.2 and Section 4.4, and subject to the acceleration provisions of Section 6, each Participant must also elect the manner in which his deferred amounts will be paid.

(a) Mandatory Single Sum Cash Payments. All amounts that are to be paid at a date certain prior to a Participant's Separation from Service, death, or Disability (but only for pre-2005 EDCP Ledgers) must be paid in the form of a single sum cash payment. Also, except as provided in Section 4.5(b), all deferred amounts otherwise payable upon a Participant's Separation from Service, death, or Disability (but only for pre-2005 EDCP Ledgers) shall be paid in the form of a single sum cash payment.

(b) Optional Forms of Distribution. In lieu of a single sum cash payment, a Participant may elect to have all amounts payable hereunder on account of Separation from Service after his attainment of age 55, death while employed or providing service as a Director, as applicable, and after attainment of age 55, or Separation from Service due to Disability (but only for pre-2005 EDCP Ledgers), paid in the form of annual installment payments over a period not to exceed five (5) years for the post-2004 EDCP Ledger (fifteen (15) years for pre-2005 EDCP Ledgers) commencing as soon as practicable after such Separation from Service, death or Disability (only for pre-2005 EDCP Ledgers). A Participant may elect to change his election as to the form of payment of deferred amounts at any time before his Separation from Service; provided, however, that an election as to a form of payment shall not be valid unless it has been in effect for at least twelve (12) months before the Participant's Separation from Service, death or Disability (only for pre-2005 EDCP Ledgers) and, for post-2004 EDCP Ledgers, the Participant postpones the commencement date for five (5) years beyond the date payment would otherwise have commenced in the absence of the election. If an election otherwise made is not effective because it was not in effect for at least twelve (12) months before the Participant's Separation from Service, death or Disability (but only for pre-2005 EDCP Ledgers), the last valid distribution election shall be effective or, in the absence of a valid election, all amounts shall be paid in the form of a single sum cash payment. Unless specifically elected otherwise, payments of all deferred amounts will be made in a single lump sum cash payment paid as soon as practicable after the conclusion of the applicable deferral period pursuant to Section 4.4.

4 . 6 Modification of Deferral Date. A Participant who is an Eligible Employee may request that the Committee approve a modification to his "date certain" deferral, as follows:

(a) A Participant may request that the Committee approve an additional deferral period of at least sixty (60) months for the post-2004 EDCP Ledger (at least twelve (12) months for the pre-2005 EDCP Ledger) with respect to any amount that was initially deferred to a "date certain" EDCP Ledger. Any such request must be made, in accordance with such procedures established by the Committee, in its discretion, at least twelve (12) months before the expiration of the date certain deferral period for the deferred amount for which an additional deferral election is requested. Notwithstanding the foregoing, if a Participant had previously deferred amounts to a "Separation from Service" EDCP Ledger and subsequently elected to accelerate the distribution of all or part of such amounts attributable to pre-2005 EDCP Ledgers to a date certain, pursuant to Section 6.4(b), that election is irrevocable and the Participant may not make any further deferral elections with respect to such amounts.

(b) A Participant may request, in accordance with such procedures established by the Committee, in its discretion, that the Committee approve a modified deferral date for the Participant's "date certain" pre-2005 EDCP Ledger as long as the modified deferral date is no earlier than twelve (12) months from the date of such election and the original date certain to which amounts were deferred is not within twelve (12) months from the date of such modification election.

SECTION 5. EDCP LEDGERS – DEFERRED COMPENSATION ACCOUNTS

5 . 1 Participant Accounts. The Committee shall establish and maintain for each Participant a bookkeeping account or accounts to track deferrals made by such Participant. Such accounts shall be referred to herein as "EDCP Ledgers." Deferred amounts shall be credited to each Participant's EDCP Ledger(s) at such times as required under Section 4. Effective as of January 1, 2002, no more than two EDCP Ledgers may be established at any time for any Participant reflecting amounts deferred to a date certain for Eligible Employee's only (the Participant's "date certain" EDCP Ledger) separately from amounts initially deferred to Separation from Service (the Participant's "Separation from Service" EDCP Ledger). Each such EDCP Ledger shall separately reflect the pre-2005 deferrals and post-2004 deferrals. Once amounts are completely paid from the "date certain" EDCP Ledger for a Participant who is an Eligible Employee, such Participant may establish a new "date certain" EDCP Ledger for future deferrals. In addition to deferrals otherwise provided for under Section 4, any Participant's cash balance account amounts transferred to this Plan from the KERP shall be credited to the Participant's pre-2005 "Separation from Service" EDCP Ledger.

5.2 Hypothetical Earnings . Additional amounts shall be credited to (or deducted from) a Participant's EDCP Ledgers to reflect the hypothetical earnings (or losses) that would have been experienced had the deferred amounts been invested in the Investment Options selected by the Participant pursuant to his investment election. The Committee shall establish such procedures as it deems necessary, in its sole discretion, to allow Participants the ability to designate that all or a portion of amounts deferred to their EDCP Ledgers be hypothetically invested among the Investment Options. The Committee is authorized to select an Investment Option to serve as a default Investment Option in the absence of an actual election by any Participant. All amounts credited to Participants' EDCP Ledgers shall continue to be hypothetically invested among the Investment Options until such amounts are paid in full to the Participant (or his Beneficiary). Notwithstanding the foregoing, and subject to Section 9.2, no Participant shall have a right to designate the specific actual investment of deferred amounts.

5.3 Charges Against Accounts. There shall be charged against each Participant's account any payments made to the Participant or to his Beneficiary in accordance with Section 6 hereof.

SECTION 6. PAYMENT OF DEFERRED AMOUNTS

6.1 Payment of Deferred Amounts. Payment of a Participant's EDCP Ledger(s), including accumulated hypothetical earnings (or losses), shall be paid in cash commencing with the conclusion of the deferral period otherwise provided in Section 4. The payments shall be made in the manner selected by the Participant under Section 4.5. The amount of any annual installment payment shall equal the Participant's distributable EDCP Ledger(s), determined as of the last day of the month preceding the payment date multiplied by a fraction, the numerator of which is one and the denominator of which is the number of installment payments remaining to be paid.

6.2 Acceleration of Payments. Notwithstanding the deferral period otherwise applicable to deferred amounts hereunder:

(a) if a Participant dies after commencement of installment payments and prior to the payment of all amounts credited to his EDCP Ledger(s), the balance of any amount payable shall continue to be paid in installment distributions, unless:

(i) with respect to pre-2005 EDCP Ledgers only, the Participant's Beneficiary is not a natural person (or a trust, the beneficiary of which is a natural person);

(ii) the Participant's Beneficiary elects to accelerate the amounts remaining to be paid, pursuant to Section 6.3 or Section 6.4 (with respect to pre-2005 EDCP Ledgers); or

(iii) if a Participant dies after commencement of installment payments and prior to the payment of all amounts credited to his EDCP Ledger(s), the balance of any amount payable with respect to post-2004 EDCP Ledger(s) shall be paid in a lump sum; and

(b) if the total amount payable from a Participant's pre-2005 EDCP Ledger(s) is less than five thousand dollars ($5,000) (one hundred thousand dollars ($100,000) for post-2004 Ledger(s)) at the time for payment specified, such amount shall be paid in a lump sum.

6.3 Unforeseeable Emergency. At any time before the time an amount is otherwise payable hereunder, a Participant (or the Participant's Beneficiary) may request, pursuant to such procedures prescribed by the Committee in its sole discretion, a single sum cash distribution of all or a portion of the amounts credited to his EDCP Ledger(s) due to the Participant's (or the Beneficiary's) severe financial hardship, subject to the following requirements set forth in this Section 6.3. The rules set forth in this Section 6.3 govern distributions of post-2004 EDCP Ledgers in the case of an unforeseeable emergency. Distributions of pre-2005 EDCP Ledgers in the case of an unforeseeable emergency shall be governed by terms of the Plan in effect as of October 3, 2004.

(a) Such distribution shall be made, in the sole discretion of the Committee, in the case of an unforeseeable emergency, which shall be limited to a severe financial hardship to the Participant resulting from an illness or accident of the Participant, the Participant's spouse, the Participant's Beneficiary, or of a Participant's dependent (as defined in Code Section 152, without regard to Code Sections 152(b)(1), (b)(2), and (d)(1)(B)), loss of the Participant's property due to casualty (including the need to rebuild a home following damage to a home not otherwise covered by insurance, for example, not as a result of a natural disaster); or other similar extraordinary and unforeseeable circumstances arising as a result of events beyond the control of the Participant. Examples of events that may constitute an unforeseeable emergency include the imminent foreclosure of or eviction from the Participant's primary residence; the need to pay for medical expenses, including non-refundable deductibles, as well as for the costs of prescription drug medication; and the need to pay for the funeral expenses of the Participant's spouse, the Participant's Beneficiary, or the Participant's dependent (as defined in Code Section 152, without regard to Code Sections 152(b)(1), (b)(2), and (d)(1)(B)).

(b) Whether a Participant is faced with an unforeseeable emergency will be determined based on the relevant facts and circumstances of each case, but, in any case, a distribution on account of an unforeseeable emergency may not be made to the extent that such emergency is or may be relieved:

(i) through reimbursement or compensation by insurance or otherwise,

(ii) by liquidation of the individual's assets, to the extent the liquidation of such assets would not itself cause severe financial hardship, or

(iii) by cessation of deferrals under the Plan.

Examples of circumstances that are not considered to be unforeseeable emergencies include the need to send an individual's child to college or the desire to purchase a home.

(c) In all events, the amount available for distribution on account of an unforeseeable emergency pursuant to this Section 6.3 shall be limited to the amount reasonably necessary to satisfy the emergency need (which may include amounts necessary to pay any federal, state, local, or foreign income taxes or penalties reasonably anticipated to result from the distribution), and shall be determined in accordance with Code Section 409A and the regulations thereunder. The Committee may require such evidence of the individual's severe financial hardship as it deems appropriate. The Committee shall consider any requests for payment under this Section 6.3 in accordance with the standards of interpretation described in Code Section 409A and the regulations and other guidance thereunder.

(d) All distributions under this Section 6.3 shall be made from the Participant's EDCP Ledger(s) as soon as practicable after the Committee has approved the distribution and the amounts credited to the Participant's EDCP Ledger(s) shall be reduced on a pro rata basis among his elected Investment Options to reflect the accelerated distribution.

6.4 Acceleration Subject to Substantial Limitations. At any time before an amount is otherwise payable hereunder, a Participant (or the Participant's Beneficiary) may request, pursuant to such procedures prescribed by the Committee in its sole discretion, that an accelerated distribution of all or a portion of the amounts credited to his pre-2005 EDCP Ledger(s) be made pursuant to the following provisions:

(a) An individual may accelerate all or any portion of his pre-2005 EDCP Ledger(s) and have such amount paid in the form of a single sum cash payment as soon as practicable after receipt of such request by the Committee; provided, however, that an amount equal to ten percent (10%) of the amount requested by the Participant will be forfeited from the Participant's EDCP Ledger(s) immediately prior to such payment.

(b) In lieu of (or in addition to) any acceleration payment under Section 6.4(a) above, an individual may elect to accelerate the payment of all or any portion of the amounts otherwise payable from his pre-2005 EDCP Ledger(s), provided that:

(i) the accelerated amounts are not otherwise payable within twelve (12) months of the date of such election;

(ii) the accelerated amounts must be paid in the form of a single sum cash payment at the date specified by the individual; and

(iii) the accelerated payment may not be paid any earlier than twelve (12) months after the date such acceleration election is received by the Committee.

(c) No individual may make more than two acceleration elections with respect to the individual's pre-2005 EDCP Ledger(s) in any Year.

(d) All distributions under this Section 6.4 shall be made from the Participant's pre-2005 EDCP Ledger(s) in a single sum cash payment as soon as practicable after the date approved by the Committee and the amounts credited to the Participant's pre-2005 EDCP Ledger(s) shall be reduced on a pro rata basis among his elected Investment Options to reflect the accelerated distribution.

6 . 5 Committee Modification of Installment Distribution Options. Notwithstanding anything to the contrary in this Plan, the Committee, in its sole discretion, may choose to accelerate any installment distribution amounts otherwise payable hereunder from pre-2005 Ledgers to a Participant (or Beneficiary), with or without the consent of the Participant (or Beneficiary).

6 . 6 Delay in Distribution for Specified Employees. Notwithstanding anything to the contrary in this Plan, if the Participant is a "specified employee," as determined in accordance with procedures adopted by the Corporation that reflect the requirements of Code Section 409A(a)(2)(B)(i), distribution of the post-2004 EDCP Ledgers which is made on account of the Participant's Separation from Service shall be deferred until the earlier of (i) first day of the seventh month following the Participant's Separation from Service (without regard to whether the Participant is reemployed on that date) or (ii) the date of the Participant's death.

6.7 Compliance with Domestic Relations Order. Notwithstanding anything to the contrary in this Plan, a distribution shall be made from the Participant's EDCP Ledgers to an individual other than the Participant to the extent necessary to comply with a domestic relations order (as defined in Code Section 414(p)(1)(B)).

SECTION 7. BENEFICIARY DESIGNATION

7.1 Designation of Beneficiary. A Participant shall designate a Beneficiary or Beneficiaries who, upon the Participant's death, are to receive the amounts that otherwise would have been paid to the Participant. All designations shall be in writing and signed by the Participant. The designation shall be effective only if and when delivered to the Corporation during the lifetime of the Participant. The Participant also may change his Beneficiary or Beneficiaries by a signed, written instrument delivered to the Corporation. The payment of amounts shall be in accordance with the last unrevoked written designation of Beneficiary that has been signed and delivered to the Corporation. All Beneficiary designations shall be addressed to the Secretary of SCANA Corporation and delivered to his office.

7.2 Death of Beneficiary.

(a) In the event that all of the Beneficiaries named in Section 7.1 predecease the Participant, the amounts that otherwise would have been paid to said Beneficiaries shall, where the designation fails to redirect to alternate Beneficiaries in such circumstance, be paid to the Participant's estate as the alternate Beneficiary.

(b) In the event that two or more Beneficiaries are named, and one or more but less than all of such Beneficiaries predecease the Participant, each surviving Beneficiary shall receive any dollar amount or proportion of funds designated or indicated for him per the designation of Section 7.1, and the dollar amount or designated or indicated share of each predeceased Beneficiary which the designation fails to redirect to an alternate Beneficiary in such circumstance shall be paid to the Participant's estate as an alternate Beneficiary.

7.3 Ineffective Designation.

(a) In the event the Participant does not designate a Beneficiary, or if for any reason such designation is entirely ineffective, the amounts that otherwise would have been paid to the Beneficiary shall be paid to the Participant's estate as the alternate Beneficiary.

(b) In the circumstance that designations are effective in part and ineffective in part, to the extent that a designation is effective, distribution shall be made so as to carry out as closely as discernable the intent of the Participant, with result that only to the extent that a designation is ineffective shall distribution instead be made to the Participant's estate as an alternate Beneficiary.

SECTION 8. CHANGE IN CONTROL PROVISIONS

8.1 Successors. Notwithstanding anything in this Plan to the contrary, upon the occurrence of a Change in Control, the Company will require any successor (whether direct or indirect, by purchase, merger, consolidation, or otherwise) of all or substantially all of the business and/or assets of the Company or of any division or subsidiary thereof to expressly assume and agree to perform this Plan in the same manner and to the same extent that the Company would be required to perform it if no such succession had taken place, subject to the remaining provisions of this Section 8.1. Participants shall become entitled to benefits hereunder in accordance with the terms of this Plan based on amounts credited to each Participant's EDCP Ledger(s) as of the date of such Change in Control plus accumulated hypothetical earnings (or losses) attributable thereto (adjusted to reflect any change from the most recent EDCP Ledger calculation to the end of the month prior to the month such amounts are distributed to each Participant, based on the Investment Options in effect at such time). In the case of any Change in Control, any successor to the Company shall not be required to provide for additional deferral of benefits beyond the date of such Change in Control except as required under Code Section 409A.

8.2 Amendment and Termination After Change in Control. Notwithstanding the foregoing, and subject to this Section 8, no amendment, modification or termination of the Plan may be made, and no Participants may be added to the Plan, upon or following a Change in Control if it would have the effect of reducing any benefits earned (including optional forms of distribution) by any Participant prior to such Change in Control without the written consent of all of the Plan's Participants covered by the Plan at such time. In all events, however, the Corporation reserves the right to amend, modify or delete the provisions of Section 8 at any time prior to a Change in Control, pursuant to a Board resolution adopted by a vote of two-thirds (2/3) of the Board members then serving on the Board.

SECTION 9. GENERAL PROVISIONS

9.1 Contractual Obligation. It is intended that the Corporation is under a contractual obligation to make payments from a Participant's account when due. Payment of account balances shall be made out of the general funds of the Corporation as determined by the Board without any restriction of the assets of the Corporation relative to the payment of such contractual obligations; the Plan is, and shall operate as, an unfunded plan.

9.2 Unsecured Interest. No Participant or Beneficiary shall have any interest whatsoever in any specific asset of the Corporation. To the extent that any person acquires a right to receive payment under this Plan, such right shall be no greater than the right of any unsecured general creditor of the Corporation.

9.3 "Rabbi" Trust. In connection with this Plan, the Board has established a grantor trust (known as the "SCANA Corporation Executive Benefit Plan Trust" and referred to herein as the "Trust") for the purpose of accumulating funds to satisfy the obligations incurred by the Corporation under this Plan (and such other plans and arrangements as determined from time to time by the Corporation). At any time prior to a Change in Control, as that term is defined in such Trust, the Corporation may transfer assets to the Trust to satisfy all or part of the obligations incurred by the Corporation under this Plan, as determined in the sole discretion of the Committee, subject to the return of such assets to the Corporation at such time as determined in accordance with the terms of such Trust. Notwithstanding the establishment of the Trust, the right of any Participant to receive future payments under the Plan shall remain an unsecured claim against the general assets of the Corporation.

9.4 Employment/Participation Rights.

(a) Nothing in the Plan shall interfere with or limit in any way the right of the Company to terminate any Participant's employment or service at any time, nor confer upon any Participant any right to continue in the employ or service of the Company.

(b) Nothing in the Plan shall be construed to be evidence of any agreement or understanding, express or implied, that the Company will continue to employ or require the services of a Participant in any particular position or at any particular rate of remuneration.

(c) No employee or director shall have a right to be selected as a Participant, or, having been so selected, to be selected again as a Participant.

(d) Nothing in this Plan shall affect the right of a recipient to participate in and receive benefits under and in accordance with any pension, profit-sharing, deferred compensation or other benefit plan or program of the Company.

9.5 Nonalienation of Benefits.

(a) Subject to Section 6.7, no right or benefit under this Plan shall be subject to anticipation, alienation, sale, assignment, pledge, encumbrance, or change, and any attempt to anticipate, alienate, sell, assign, pledge, encumber or change the same shall be void; nor shall any such disposition be compelled by operation of law.

(b) No right or benefit hereunder shall in any manner be liable for or subject to the debts, contracts, liabilities, or torts of the person entitled to benefits under the Plan.

(c) If any Participant or Beneficiary hereunder should become bankrupt or attempt to anticipate, alienate, sell, assign, pledge, encumber, or change any right or benefit hereunder (other than as permitted in Section 6.7), then such right or benefit shall, in the sole discretion of the Committee, cease, and the Committee shall direct in such event that the Corporation hold or apply the same or any part thereof for the benefit of the Participant or Beneficiary in such manner and in such proportion as the Committee may deem proper.

9.6 Severability. If any particular provision of the Plan shall be found to be illegal or unenforceable for any reason, the illegality or lack of enforceability of such provision shall not affect the remaining provisions of the Plan, and the Plan shall be construed and enforced as if the illegal or unenforceable provision had not been included.

9.7 No Individual Liability. It is declared to be the express purpose and intention of the Plan that no liability whatsoever shall attach to or be incurred by the shareholders, officers, or directors of the Corporation or any representative appointed hereunder by the Corporation, under or by reason of any of the terms or conditions of the Plan.

9.8 Applicable Law. This Plan shall be governed by and construed in accordance with the laws of the State of South Carolina except to the extent governed by applicable federal law (including the requirements of Code Section 409A).

SECTION 10. PLAN ADMINISTRATION, AMENDMENT AND TERMINATION

10.1 In General. This Plan shall be administered by the Committee, which shall have the sole authority, in its sole discretion, to construe and interpret the terms and provisions of the Plan and determine the amount, manner and time of payment of any benefits hereunder. The Committee shall maintain records, make the requisite calculations and disburse payments hereunder, and its interpretations, determinations, regulations and calculations shall be final and binding on all persons and parties concerned. The Committee may adopt such rules as it deems necessary, desirable or appropriate in administering this Plan and the Committee may act at a meeting, in a writing without a meeting, or by having actions otherwise taken by a member of the Committee pursuant to a delegation of duties from the Committee.

10.2 Claims Procedure. Any person dissatisfied with the Committee's determination of a claim for benefits hereunder must file a written request for reconsideration with the Committee. This request must include a written explanation setting forth the specific reasons for such reconsideration. The Committee shall review its determination promptly and render a written decision with respect to the claim, setting forth the specific reasons for such denial written in a manner calculated to be understood by the claimant. Such claimant shall be given a reasonable time within which to comment, in writing, to the Committee with respect to such explanation. The Committee shall review its determination promptly and render a written decision with respect to the claim. Such decision upon matters within the scope of the authority of the Committee shall be conclusive, binding, and final upon all claimants under this Plan.

10.3 Finality of Determination. The determination of the Committee as to any disputed questions arising under this Plan, including questions of construction and interpretation, shall be final, binding, and conclusive upon all persons.

10.4 Delegation of Authority. The Committee may, in its discretion, delegate its duties to an officer or other Employee of the Company, or to a committee composed of officers or Employees of the Company.

10.5 Expenses. The cost of payment from this Plan and the expenses of administering the Plan shall be borne by the Corporation.

10.6 Tax Withholding. The Corporation shall have the right to deduct from all payments made from the Plan any federal, state, or local taxes required by law to be withheld with respect to such payments.

10.7 Incompetency. Any person receiving or claiming benefits under the Plan shall be conclusively presumed to be mentally competent and of age until the Committee receives written notice, in a form and manner acceptable to it, that such person is incompetent or a minor, and that a guardian, conservator, statutory committee under the South Carolina Code of Laws, or other person legally vested with the care of his estate has been appointed. In the event that the Committee finds that any person to whom a benefit is payable under the Plan is unable to properly care for his affairs, or is a minor, then any payment due (unless a prior claim therefor shall have been made by a duly appointed legal representative) may be paid to the spouse, a child, a parent, or a brother or sister, or to any person deemed by the Committee to have incurred expense for the care of such person otherwise entitled to payment.

In the event a guardian or conservator or statutory committee of the estate of any person receiving or claiming benefits under the Plan shall be appointed by a court of competent jurisdiction, payments shall be made to such guardian or conservator or statutory committee provided that proper proof of appointment is furnished in a form and manner suitable to the Committee. Any payment made under the provisions of this Section 10.7 shall be a complete discharge of liability therefor under the Plan.

10.8 Notice of Address. Any payment made to a Participant or to his designated Beneficiary at the last known post office address of the distributee on file with the Corporation, shall constitute a complete acquittance and discharge to the Corporation and any director or officer with respect thereto, unless the Corporation shall have received prior written notice of any change in the condition or status of the distributee. Neither the Corporation nor any director or officer shall have any duty or obligation to search for or ascertain the whereabouts of the Participant or his designated Beneficiary.

10.9 Amendment and Termination. The Corporation expects the Plan to be permanent but, because future conditions affecting the Corporation cannot be anticipated or foreseen, the Corporation reserves the right to amend, modify, or terminate the Plan at any time by action of its Board, subject to Section 8.2 and subject to the requirements of Code Section 409A with respect to post-2004 EDCP Ledgers; provided, however, that any such action shall not diminish retroactively any amounts, both deferred amounts and any hypothetical earnings (or losses) thereon, which have been credited to any Participant's EDCP Ledger(s). If the Board amends the Plan to cease future deferrals hereunder or terminates the Plan, the Board may, in its sole discretion, direct that the value of each Participant's EDCP Ledger(s) be paid to each Participant (or Beneficiary, if applicable) in an immediate lump sum payment; provided, however, that in the case of any post-2004 EDCP Ledger(s), the requirements of Reg. § 1.409A-3(j)(4)(ix) are met. In the absence of any such direction from the Board, the Plan shall continue as a "frozen" plan under which no future deferrals will be recognized unless required under Code Section 409A (however, hypothetical earnings (or losses) shall continue to be recognized in accordance with the Investment Options that continue to be made available under the Plan) and each Participant's benefits shall be paid in accordance with the otherwise applicable terms of the Plan.

10.10 Plan to Comply with Code Section 409A. Notwithstanding any provision to the contrary in this Plan, each provision of this Plan shall be interpreted to permit deferrals of Excess Compensation and the payment of deferred amounts in accordance with Code Section 409A and any provision that would conflict with such requirements shall not be valid or enforceable.

SECTION 11. EXECUTION

IN WITNESS WHEREOF, as approved by the Board of Directors of the Corporation on November 25, 2014, the Corporation has caused this SCANA Corporation Executive Deferred Compensation Plan to be executed by its duly authorized officer this 9th day of January, 2015, to be effective as of the dates specified herein.

SCANA CORPORATION

DIRECTOR COMPENSATION AND DEFERRAL PLAN

SECTION 1. ESTABLISHMENT AND PURPOSE

1.1 Establishment of the Plan. SCANA Corporation (the "Company") established the SCANA Corporation Nonemployee Director Stock Plan, effective as of January 1, 1997. Effective as of January 1, 2001, the plan was renamed the "SCANA Corporation Director Compensation and Deferral Plan" (hereinafter called the "Plan") and amended and restated to include a deferred compensation component. Effective as of January 1, 2009, the Plan was amended and restated to comply with the requirements of Code Section 409A. Effective as of December 31, 2009, the Plan was again amended and restated to reflect further modifications to comply with Code Section 409A as well as to implement certain design changes. Effective as of April 21, 2011, the Plan was again amended and restated. The Plan was most recently amended and restated as provided herein, effective as of November 30, 2014.

1.2 Purpose of the Plan. The purpose of the Plan is to promote the achievement of long-term objectives of the Company by linking the personal interests of Nonemployee Directors, as defined in Section 2(r) herein, to those of the Company's shareholders and to attract and retain Nonemployee Directors of outstanding competence by mandating that a certain portion as may be determined from time to time of the Retainer Fee of each Participant as defined in Section 2(u) herein, be paid in Company Stock, unless such amount is voluntarily deferred to a future date in accordance with the Plan's terms or pursuant to the SCANA Corporation Executive Deferred Compensation Plan ("EDCP"). The Plan is intended to conform to the provisions of Rule 16b-3 of the Securities Exchange Act of 1934, as amended, or any replacement rule in effect from time to time ("Rule 16b-3"). The Plan also provides a means by which Nonemployee Directors may defer certain additional amounts to some future period.

SECTION 2. DEFINITIONS

2.1 Definitions. Whenever used herein, the following terms shall have the meanings set forth below, unless otherwise expressly provided herein or unless a different meaning is plainly required by the context, and when the defined meaning is intended, the term is capitalized:

(a) "Act" means the Securities Exchange Act of 1934, as amended.

(b) "Beneficial Owner" shall have the meaning ascribed to such term in Rule 13d-3 of the General Rules and Regulations under the Act.

(c) "Beneficiary" means any person or entity who, upon the Participant's death, is entitled to receive the Participant's benefits under the Plan in accordance with Section 7 hereof.

(d) "Board of Directors" means the board of directors of the Company.

(e) "Change in Control" means a change in control of the Company of a nature that would be required to be reported in response to Item 6(e) of Schedule 14A of Regulation 14A promulgated under the Act, whether or not the Company is then subject to such reporting requirements; provided that, without limitation, such a Change in Control shall be deemed to have occurred if:

(i) Any Person (as defined in Section 3(a)(9) of the Act and used in Sections 13(d) and 14(d) thereof, including a "group" as defined in Section 13(d)) is or becomes the Beneficial Owner, directly or indirectly, of twenty-five percent (25%) or more of the combined voting power of the outstanding shares of capital stock of the Company;

(ii) During any period of two (2) consecutive years (not including any period prior to the execution of this Plan) there shall cease to be a majority of the Board of Directors comprised as follows: individuals who at the beginning of such period constitute the Board of Directors and any new director(s) whose election by the Board of Directors or nomination for election by the Company's stockholders was approved by a vote of at least two-thirds (2/3) of the directors then still in office who either were directors at the beginning of the period or whose election or nomination for election was previously so approved; or

(iii) The consummation of a merger or consolidation of the Company with any other corporation, other than a merger or consolidation which would result in the voting shares of capital stock of the Company outstanding immediately prior thereto continuing to represent (either by remaining outstanding or by being converted into voting shares of capital stock of the surviving entity) at least eighty percent (80%) of the combined voting power of the voting shares of capital stock of the Company or such surviving entity outstanding immediately after such merger or consolidation; or the shareholders of the Company approve a plan of complete liquidation of the

Company or an agreement for the sale or disposition by the Company of all or substantially all of the Company's assets.

(f)"Code" means the Internal Revenue Code of 1986, as amended.

(g) "Company" means SCANA Corporation, a South Carolina corporation, or any successor thereto.

(h) "Company Stock" means the no par value common stock of the Company. In the event of a change in the capital structure of the Company (as provided in Section 3.6), the shares resulting from such a change shall be deemed to be Company Stock within the meaning of the Plan.

(i) "Company Stock Ledger" means an appropriate bookkeeping record established in the DCD Ledger for which amounts credited are converted into hypothetical credited shares of Company Stock.

(j) "Compensation" means Retainer Fees payable to a Participant during a Service Period by the Company.

(k) "DCD Ledger" means an appropriate bookkeeping record which shall be established for each Participant which shall reflect: (1) the amounts deferred on behalf of each Participant; and (2) the crediting of deemed investments (and hypothetical earnings on those deemed investments) with respect to amounts deferred on behalf of each Participant. Each DCD Ledger shall separately reflect the pre-2005 and post-2004 deferrals and hypothetical earnings thereon, and the portion of the post-2004 deferrals and hypothetical earnings thereon payable at a date certain and the portion payable when the Participant separates from service from the Board of Directors (referred to herein as a Participant's "pre-2005 DCD Ledger" and "post-2004 DCD Ledger"). A Participant's pre-2005 DCD Ledger shall reflect amounts deferred hereunder before January 1, 2005 (and the earnings credited thereon before, on or after January 1, 2005) for which (i) the Participant had a legally binding right as of December 31, 2004, to be paid the amount, and (ii) such right to the amount was earned and vested as of December 31, 2004 and was credited to the Participant's DCD Ledger hereunder. Pre-2005 DCD Ledgers are treated as "grandfathered" for the purposes of Code Section 409A, and are governed by the terms of the Plan in effect as of October 3, 2004.

(l) "Director" means an individual who is a member of the Board of Directors.

(m) "EDCP" means the SCANA Corporation Executive Deferred Compensation Plan.

(n) "Fair Market Value" of Company Stock shall mean:

(i) in the case of any distribution, the closing price for shares of Company Stock on the New York Stock Exchange on the date of distribution; and

(ii) in the case of any other transaction hereunder designed to track the investment or reinvestment of Company Stock, the closing price for shares of Company Stock on the New York Stock Exchange on the measuring date.

(o) "Growth Increment" means the amount of interest credited to amounts credited to a Participant's Growth Increment Ledger.

(p) "Growth Increment Ledger" means an appropriate bookkeeping record established in the DCD Ledger for which amounts are credited with Growth Increments.

(q) "Investor Plan" means the SCANA Investor Plus Plan.

(r) "Nonemployee Director" means a Director who is not currently employed by the Company or any subsidiary of the Company (without regard to whether such individual was previously employed by the Company).

(s) "Participant" means a Nonemployee Director satisfying the eligibility requirements of Section 3.

(t) "Plan" means the SCANA Corporation Director Compensation and Deferral Plan.

(u) "Retainer Fees" means the amount of compensation payable to each Participant with respect to services rendered to the Company as a Director for the Service Period. Such term includes annual leadership retainer fees payable to the Lead Director, Audit Committee Chair, Compensation Committee Chair, Nominating and Governance Committee Chair, Nuclear Oversight Committee Chair or any other retainer fee as determined by the Company or its delegate from time to time.

(v) "Rule 16b-3" means Rule 16b-3 of the Act, as amended, or any replacement rule in effect from time to time.

(w) "Service Period" means a calendar year.

2.2 Gender and Number. Except when otherwise indicated by the context, any masculine terminology used herein also shall include the feminine and the feminine shall include the masculine, and the use of any term herein in the singular may also include the plural and the plural shall include the singular.

SECTION 3. ELIGIBILITY AND PARTICIPATION

3.1Eligibility. All Nonemployee Directors shall automatically be eligible to participate in this Plan.

3.2Election of Compensation Payment.

(a) Unless otherwise deferred in accordance with Section 4 or under the EDCP, each Participant's Retainer Fee amounts shall be paid to the Participant on a quarterly basis and such payment shall be made in shares of Company Stock or cash, as determined by the Company or its delegate. The portion of the Retainer Fee payment that is made in shares of Company Stock is referred to as the "Stock Retainer Fee" and the portion of the Retainer Fee payment that is made in cash is referred to as the "Cash Retainer Fee." Notwithstanding anything to the contrary in this Plan, if a Participant elects to defer all or a portion of his Retainer Fee under the EDCP and in accordance with the terms of the EDCP, the Company or its delegate shall designate a portion of the Retainer Fee as the "Stock Retainer Fee" and a portion of the Retainer Fee as the "Cash Retainer Fee," but no actual payment of shares of Company Stock shall be paid to such Participant and the terms of the EDCP will apply with respect to such deferred amounts.

(b) With respect to all payments in Company Stock under this Section 3.2, and subject to Section 3.3, each Participant shall be entitled to a number of shares of Company Stock equal to the smallest number of whole shares of Company Stock which, when multiplied by Fair Market Value would equal no less than the equivalent amount of Compensation otherwise payable to the Participant. Any remaining amounts owed shall be deposited into an account in the Participant's name in the Investor Plan.

3.3Payment of Company Stock. In connection with amounts to be paid during a Service Period under Section 3.2 which are paid in the form of Company Stock, each Participant may elect to have the shares of Company Stock to be issued to him pursuant to the Plan during the Service Period registered in his name. In such case, all shares of Company Stock to be paid shall be issued as promptly as practicable after the amounts are otherwise payable. If a Participant does not make such an election, all shares issued pursuant to the Plan during the Service Period will be deposited into an account in his name in the Investor Plan. All cash dividends paid on shares deposited in the Investor Plan will be reinvested in additional shares of Company Stock unless the Participant notifies the Investor Plan in accordance with the terms thereof that he does not want to reinvest such dividends. During the last quarter of each calendar year in which there is a change in the prospectus for the Investor Plan, all Participants who have not been provided previously with a copy of such changed prospectus shall be provided with a copy of the then-current prospectus. In addition, each Participant who is not yet a participant in the Investor Plan shall be given an Investor Plan prospectus shortly before he becomes an Investor Plan participant.

3.4Stock. Company Stock issued pursuant to the Plan may be either original issue or stock purchased on the open market. The maximum number of shares that may be issued pursuant to the Plan is four hundred thousand (400,000) shares, subject to adjustment as provided in

Section 3.6. In the event of a change in the capital structure of the Company (as provided in Section 3.6), the shares resulting from such change shall be deemed to be Company Stock within the meaning of the Plan. The aggregate number of shares of Company Stock reserved for issuance pursuant to the Plan shall be reduced by the issuance of shares under the Plan.

3.5 Issuance of Company Stock. Notwithstanding anything in this Plan to the contrary:

(a) The Company shall not be required to issue or deliver any certificate for shares of Company Stock to a Participant before (i) such shares have been admitted to listing on the New York Stock Exchange, (ii) the Company has received any required registration or other qualification of such shares under any state or federal law or regulation that the Company's counsel shall determine is necessary or advisable and (iii) the Company is satisfied that all applicable legal requirements have been complied with. The Company may place on a certificate representing Company Stock any legend deemed necessary by the Company's counsel to comply with federal or state securities laws. Until the Participant has been issued a certificate for the shares of Company Stock acquired, the Participant shall possess no shareholder rights with respect to the shares.

(b) If at any time there may not be sufficient shares available under the Plan to permit the awards of Company Stock, the awards shall be reduced pro rata (to zero, if necessary) so as not to exceed the number of shares then available for issuance under the Plan.

3.6 Effect of Stock Dividends and Other Changes in Capital Structure. Appropriate adjustments shall be made automatically to the number and kind of shares to be issued under the Plan, as well as to any deferred amounts credited to a Participant's Company Stock Ledger and any other relevant provisions of the Plan, if there are any changes in the Company Stock by reason of a stock dividend, stock split, combination of shares, spin-off, reclassification, recapitalization, merger, consolidation or other change in the Company's capital stock (including, but not limited to, the creation or issuance to shareholders generally of rights, options, or warrants for the purchase of common stock or preferred stock of the Company). If the adjustment would produce fractional shares, the fractional shares shall be eliminated by rounding to the nearest whole share. Any adjustments shall be made in a manner consistent with Rule 16b-3. Any such adjustments shall neither enhance nor diminish the rights of a Participant and the Company shall pay all costs of administering the Plan, including all commissions with respect to open market purchases.

SECTION 4. ELECTION TO DEFER

4.1 Deferral Election. Subject to the conditions set forth in this Plan, and such procedures established by the Company, a Participant may elect to defer amounts of Compensation under this Plan, which amounts are not otherwise deferred by such Participant under the EDCP, as follows:

(a) At a time decided by the Company before the beginning of each Service Period, a Participant irrevocably may elect, by written notice to the Company's Secretary (or his designee), to defer a portion of his Compensation earned for such Service Period. In the case of a Participant elected to the Board of Directors during the Service Period, the Participant may elect, within 30 days of his election to the Board of Directors, to defer a portion of his Compensation for services to be performed subsequent to his election. Such election shall specify whether:

(i) the Participant elects to defer all or a portion of his Stock Retainer Fee and acknowledges that all such deferrals shall be credited to the Company Stock Ledger on his behalf; and

(ii) the Participant elects to defer all or a portion of his Cash Retainer Fee and designates what portions of all such deferrals shall be credited on his behalf to either the Growth Increment Ledger or the Company Stock Ledger;

provided, however, that once any portion of a Participant's Compensation is deferred and credited to the Company Stock Ledger as provided herein, that portion of Compensation may not subsequently be credited to the Growth Increment Ledger, and once any portion of a Participant's Compensation is deferred and credited to the Growth Increment Ledger as provided herein, that portion of Compensation may not subsequently be credited to the Company Stock Ledger.

(b) The deferral election specified in Section 4.1(a) above shall be applied to the Participant's Compensation for each Service Period (or the portion of the Service Period, as applicable) to which the deferral election applies. Any deferral election shall remain in effect for future Service Periods unless affirmatively changed in writing by the Participant and received by the Corporate Secretary by the time established for such purpose prior to the beginning of the Service Period for which the change is effective.

(c) If a Participant makes a deferral election under Section 4.1(a) whereby amounts are credited to the Company Stock Ledger on his behalf, dividends attributable to shares of Company Stock credited to his Company Stock Ledger shall be automatically deferred and deemed reinvested pursuant to Section 5.3.

4.2 Deferral Period. With respect to deferrals under this Plan made in accordance with Section 4.1, each Participant must elect a deferral period for each annual deferral. Subject to the additional deferral provisions of Section 4.3 and the acceleration provisions of Section 6.4, any post-2004 deferral may be until the earlier of (i) the Participant's separation from service from the Board of Directors for any reason or (ii) a date certain, subject to any limitations that the Company (or its delegate) in its discretion may choose to apply at the time of the deferral election. All post-2004 deferrals to a date certain must be to the same date certain. In the absence of an election to the contrary by the Participant for amounts deferred hereunder for any deferral period, such deferrals shall be paid in a lump sum payment as soon as practicable after the Participant's separation from service from the Board of Directors for any reason.

4.3 Election to Defer a Previously Deferred Amount or Change the Manner of Payment.

(a) Subject to the acceleration provisions of Section 6.4 and the Board of Directors approval requirement of Section 4.3(b) with respect to pre-2005 deferrals, a Participant may elect an additional deferral period of at least sixty (60) months with respect to any previously deferred amount credited to the post-2004 DCD Ledger that is payable at a date certain, and an additional deferral period of at least twelve (12) months for each separate deferral credited to the pre-2005 DCD Ledger. With respect to amounts deferred until separation from service from the Board of Directors, Participants may also elect a new manner of payment permitted under Section 6.2 with respect to any previously deferred amounts, provided that in the case of amounts credited to post-2004 DCD Ledgers that are payable on separation from service from the Board of Directors, payments are delayed for sixty (60) months from the date payments would otherwise have commenced absent the election. Any such election must be made by written notice to the Company (or its delegate) at least twelve (12) months before the expiration of the deferral period for any previously deferred amount with respect to which an additional deferral election is made (the "Modification Period").

(b) A new deferral period election or a new form of payment election made pursuant to Subsection 4.3(a) above with respect to pre-2005 DCD Ledgers shall not be automatically binding upon the Company by the mere fact of the election request(s) having been made. The Board of Directors (or its delegate) shall review each such election submitted and determine whether or not it is in the best interest of the Company to accept the elections as submitted. Such Board of Directors (or delegate) review will be made on a case-by-case basis and all determinations shall be made by the Board of Directors (or its delegate) in its sole and complete discretion after consideration of such factors as it deems relevant, including broad economic and policy implications to the Company of approving any request. The Board of Directors, or its delegate, shall notify each Participant in writing within the first sixty (60) days of the Modification Period as to whether the deferral period election or manner of payment election with respect to pre-2005 DCD Ledgers are accepted by the Company as submitted, and if not, the terms upon which such election(s) would be accepted; in the latter instance, the Participant shall, no later than on the seventy-fifth (75th) day of the Modification Period, inform the Board of Directors (or its delegate) in writing of his acceptance or rejection of the terms proffered by the

Company (or its delegate). All determinations made by the Board of Directors or its delegate shall be final and binding on all parties.

4.4Election to Change the Deferral Period and/or Form of Payment for Post-2004 DCD Ledgers.

Notwithstanding Section 4.3(a), a Participant may elect at any time prior to January 1, 2009 to change the deferral period (accelerate or defer) and/or method of payment with respect to any post-2004 DCD Ledger that is not scheduled for payment in 2008 by making written notice to the Board of Directors (or its delegates), provided such change does not cause any amounts to be paid in 2008 or cause any amounts otherwise payable in 2008 to be deferred to a later year. Any new deferral period and/or method of payment shall be subject to the requirements of Section 6.

SECTION 5. CREDITING AND INVESTMENT OF DEFERRALS

5.1DCD Ledger. The Company shall establish for each Participant a DCD Ledger which shall reflect the amounts deferred on behalf of each Participant. In the sole discretion of the Company, one or more appropriate bookkeeping records shall be established in the DCD Ledger to reflect the deemed investments (and hypothetical earnings) made by each Participant in accordance with this Section 5 which shall include, but not be limited to, the Company Stock Ledger and the Growth Increment Ledger. Each DCD Ledger shall separately reflect the pre-2005 and post-2004 deferrals and hypothetical earnings thereon, and the portion of the post-2004 deferrals and hypothetical earnings thereon payable at a date certain and the portion payable when the Participant separates from service from the Board of Directors.

5.2Adjustment of Amounts Credited to Growth Increment Ledger. All deferrals credited to each Participant's Growth Increment Ledger will be credited with Growth Increments based on the prime interest rate charged from time to time by the Wachovia Bank, N.A. The Company will have the authority to change the interest rate that may be applied to the Growth Increment Ledger. The Participant's Growth Increment Ledger shall be credited on the first day of each calendar quarter, with a Growth Increment computed on the average balance in the Participant's Growth Increment Ledger during the preceding calendar quarter. The Growth Increment shall be equal to the amount in said Growth Increment Ledger multiplied by the average interest rate selected by the Company during the preceding calendar quarter times a fraction the numerator of which is the number of days during such quarter and the denominator of which is three hundred sixty five (365). Growth Increments will continue to be credited until all of a Participant's benefits have been paid out of the Plan.

5.3Adjustment of Amounts Credited to Company Stock Ledger. All deferrals credited to each Participant's Company Stock Ledger will be converted into hypothetical credited shares of Company Stock based on the Fair Market Value of the Company Stock on the date the deferrals would otherwise have been paid to the Participant. The value of each Participant's Company Stock Ledger shall be adjusted from time to time to reflect increases and decreases in shares of Company Stock as well as any stock or cash dividends, stock splits, or other changes in the capital structure of the Company (as provided in Section 3.6), that may from time to time be declared. All dividends attributable to hypothetical shares of Company Stock credited to each Participant's Company Stock Ledger shall be converted to additional credited shares of Company Stock as though reinvested as of the next business day after the dividend is paid.

5.4Deemed Investments Not Actual Investments. Nothing in this Plan shall be construed to require the investment of any deferrals in shares of Company Stock or any other investment or give a Participant any rights whatsoever with respect to any shares of Company Stock or with respect to any other investment.

5.5Charges Against DCD Ledger. There shall be charged against each Participant's DCD Ledger any payments made to the Participant or to his Beneficiary in accordance with Section 6 hereof.

SECTION 6. PAYMENT OF DEFERRED AMOUNTS

6.1Payment of Deferred Amounts. The aggregate amounts payable under Section 6.2 as charges against the Participant's amount credited in the DCD Ledger shall be paid commencing with the conclusion of the deferral period selected by the Participant pursuant to Section 4.2, Section 4.3, or Section 4.4 hereof. The payments shall be made in the manner selected by the Participant under Section 6.2 of this Plan.

6.2Manner of Payment. Amounts credited to post-2004 DCD Ledgers that are scheduled to be paid at a "date certain" payment shall be made only in the form of a single sum payment as soon as practicable after the date certain. With respect to amounts credited to pre-2005 DCD Ledgers, and amounts credited to post-2004 DCD Ledgers that are scheduled to be paid on separation from service from the Board of Directors, Participants must irrevocably elect (subject to permitted changes under Section 4.3 and the acceleration provisions of Section 6.4) to have payment made in accordance with one of the following distribution forms:

(i)a single sum payment;

(ii)a designated number of installments payable monthly, quarterly or annually, as elected (and in the absence of an election, annually), payable over a specified period not in excess of twenty (20) years; or

(iii)in the case of a post-2004 DCD Ledger, payments in the form of annual installments with the first installment being a single sum payment of ten percent (10%) of the post-2004 DCD Ledger determined immediately prior to the date such payment is made with the balance of the post-2004 DCD Ledger paid in annual installments determined in accordance with Section 6.3 over a total specified period not in excess of twenty (20) years,

which shall be paid or commence to be paid as soon as practicable after the conclusion of the deferral period elected pursuant to Section 4.2 or Section 4.3. Any such election shall be made at the same time as the election made pursuant Section 4.1. Unless otherwise specifically elected, payments of all deferred amounts will be made in a single sum payment made as soon as practicable after the conclusion of the deferral period elected pursuant to Section 4.2 or Section 4.3. If a Participant elects an installment form of payment but fails to specify between the installment form under Section 6.2(ii) or the installment form under Section 6.2(iii), the Participant's benefit will be paid in the installment form under Section 6.2(ii).

6.3Form of Payment. Amounts credited to a Participant's Growth Increment Ledger and Company Stock Ledger shall be paid as follows:

(a)Amounts credited to the Participant's Growth Increment Ledger shall be paid in cash. If a Participant's benefit hereunder is to be paid in installments, the amount of each payment shall be equal to the amount credited to the Participant's Growth Increment

Ledger at the time of payment multiplied by a fraction, the numerator of which is one and the denominator of which is the number of installment payments remaining.

(b)Amounts credited to the Participant's Company Stock Ledger shall be paid in shares of Company Stock with any amount representing a partial share of Company Stock deposited into an account in the Participant's name in the Investor Plan. A payment of an amount credited to the Participant's Company Stock Ledger shall be converted into actual shares of Company Stock as soon as practicable prior to each payment being made to the Participant. If a Participant's benefit hereunder is to be paid in installments, the amount of each payment shall be equal to the number of shares of Company Stock then credited to the Participant's Company Stock Ledger multiplied by a fraction, the numerator of which is one and the denominator of which is the number of installment payments remaining. Any amounts attributable to a partial share of Company Stock as of any installment payment date shall be deposited into an account in the Participant's name in the Investor Plan with each installment.

6.4Acceleration of Payments. Notwithstanding the election made pursuant to Section 4.2, Section 4.3, or Section 4.4,

(a)payments shall be paid, or begin to be paid, as soon as practicable following the Participant's separation from service from the Board of Directors for any reason except as otherwise provided herein;

(b)if a Participant dies prior to the payment of all or a portion of the amounts credited to his DCD Ledger, the balance of any amount payable shall be paid in a cash lump sum to the Beneficiaries designated under Section 7 hereof;

(c)if a Participant ceases to be a Nonemployee Director but thereafter becomes an employee of the Company (or any of its subsidiaries or affiliates), all pre-2005 DCD Ledgers shall be paid as soon as practicable after such individual becomes an employee of the Company (or any of its subsidiaries or affiliates) in a single sum payment and all post-2004 DCD Ledgers shall be paid as soon as practicable after such individual has incurred a separation from service as a Nonemployee Director (as determined in accordance with Code Section 409A);

(d)if a Participant's post-2004 DCD Ledger balance is less than one hundred thousand dollars ($100,000) (five thousand dollars ($5,000) for pre-2005 DCD Ledgers) at the time for payment specified, such amount shall be paid in a single sum payment; and

(e)if applicable, the provisions of Section 8 shall apply.

Notwithstanding Section 6.4(a), in the case of any post-2004 DCD Ledgers that are payable on separation from service from the Board of Directors and that are subject to an additional deferral period of sixty (60) months under Section 4.3(a) as a result of the modification of the manner of payment, no payment attributable to any post-2004 DCD Ledgers shall be accelerated under Section 6.4(a) to a date earlier than the expiration of the sixty (60) month period.

6.5Financial Emergency. The Company (or its delegate), at its sole discretion, may alter the timing or manner of payment of deferred amounts if the Participant establishes, to the satisfaction of the Company (or its delegate), an unanticipated and severe financial hardship that is caused by an event beyond the Participant's control. In such event, the Company (or its delegate) may:

(a)provide that all, or a portion of, the amount previously deferred by the Participant immediately shall be paid in a lump sum cash payment,

(b)provide that all, or a portion of, the installments payable over a period of time immediately shall be paid in a lump sum cash payment, or

(c)provide for such other installment payment schedules as it deems appropriate under the circumstances,

as long as the amount distributed shall not be in excess of that amount which is necessary for the Participant to satisfy the financial emergency. For pre-2005 DCD Ledgers, severe financial hardship will be deemed to have occurred in the event of the Participant's or a dependent's sudden, lengthy and serious illness as to which considerable medical expenses are not covered by insurance or relative to which there results a significant loss of family income, or other unanticipated events of similar magnitude. For post-2004 DCD Ledgers, severe financial hardship will be deemed to have occurred from a sudden or unexpected illness or accident of the Participant or the Participant's spouse, Beneficiary or dependent (as defined in Code Section 152, without regard to Code Sections 152(b)(1), (b)(2), and (d)(1)(B)), loss of the Participant's property due to casualty, or other similar extraordinary and unforeseeable circumstances arising as a result of events beyond the Participant's control. Examples of events that may constitute an unforeseeable emergency for post-2004 DCD Ledgers include the imminent foreclosure of or eviction from the Participant's primary residence; the need to pay for medical expenses, including non-refundable deductibles, as well as for the costs of prescription drug medication; and the need to pay for the funeral expenses of the Participant's spouse, Beneficiary or dependent (as defined in Code Section 152, without regard to Code Sections 152(b)(1), (b)(2), and (d)(1)(B)). The circumstances that will constitute an unforeseeable emergency will depend upon the facts of each case, but, in any case, payment may not be made to the extent that such hardship is or may be relieved through reimbursement or compensation by insurance or otherwise, by liquidation of the Participant's assets, to the extent the liquidation of such assets would not itself cause severe financial hardship, or by cessation of deferrals under the Plan. Examples of circumstances that are not considered to be unforeseeable emergencies include the need to send a Participant's child to college or the desire to purchase a home. The Company's decision (or that of its delegate) in passing on the severe financial hardship of the Participant and the manner in which, if at all, the payment of deferred amounts shall be altered or modified shall be final, conclusive, and not subject to appeal. The Company shall consider any requests for payment under this Section 6.5 in accordance with the standards of interpretation described in Code Section 409A and the regulations and other guidance thereunder.

6.6 Compliance with Domestic Relations Order. Notwithstanding anything to the contrary in this Plan, a distribution shall be made from the Participant's DCD Ledgers to an individual other than the Participant to the extent necessary to comply with a domestic relations order (as defined in Code Section 414(p)(1)(B)).

SECTION 7. BENEFICIARY DESIGNATION

7.1 Designation of Beneficiary. A Participant shall designate a Beneficiary or Beneficiaries who, upon the Participant's death, are to receive the amounts that otherwise would have been paid to the Participant. All designations shall be in writing and signed by the Participant. The designation shall be effective only if and when delivered to the Company during the lifetime of the Participant. The Participant also may change his Beneficiary or Beneficiaries by a signed, written instrument delivered to the Company. The payment of amounts shall be in accordance with the last unrevoked written designation of Beneficiary that has been signed and delivered to the Company. All Beneficiary designations shall be addressed to the Company's Secretary and delivered to his office.

7.2 Death of Beneficiary.

(a) In the event that all of the Beneficiaries named pursuant to Section 7.1 predecease the Participant, the amounts that otherwise would have been paid to said Beneficiaries shall, where the designation fails to redirect to alternate Beneficiaries in such circumstance, be paid to the Participant's estate as the alternate Beneficiary.

(b) In the event that two or more Beneficiaries are named, and one or more but less than all of such Beneficiaries predecease the Participant, each surviving Beneficiary shall receive any proportion or amount of funds designated or indicated for him per the designation under Section 7.1, and the indicated share of each predeceased Beneficiary which the designation fails to redirect to an alternate Beneficiary in such circumstance shall be paid to the Participant's estate as an alternate Beneficiary.

7.3 Ineffective Designation.

(a) In the event the Participant does not designate a Beneficiary, or if for any reason such designation is entirely ineffective, the amounts that otherwise would have been paid to the Beneficiary shall be paid to the Participant's estate as the alternate Beneficiary.

(b) In the circumstance that designations are effective in part and ineffective in part, to the extent that a designation is effective, distribution shall be made so as to carry out as closely as discernable the intent of the Participant, with the result that only to the extent that a designation is ineffective shall distribution instead be made to the Participant's estate as an alternate Beneficiary.

SECTION 8. CHANGE IN CONTROL PROVISIONS

8.1 Successors. Notwithstanding anything in this Plan to the contrary, upon the occurrence of a Change in Control, the Company will require any successor (whether direct or indirect, by purchase, merger, consolidation, or otherwise) of all or substantially all of the business and/or assets of the Company or of any division or subsidiary thereof to expressly assume and agree to perform this Plan in the same manner and to the same extent that the Company would be required to perform it if no such succession had taken place, subject to the remaining provisions of this Section 8.1. Participants shall become entitled to benefits hereunder in accordance with the terms of this Plan, based on amounts credited to each Participant's DCD Ledger as of the date of such Change in Control plus accumulated Growth Increments attributable thereto (adjusted to reflect any change from the most recent Growth Increment calculation to the end of the month prior to the month such amounts are distributed to each Participant). In such case, any successor to the Company shall not be required to provide for additional deferral of benefits beyond the date of such Change in Control except as required under Code Section 409A.

8.2 Amendment and Termination After Change in Control. Notwithstanding the foregoing, and subject to this Section 8, no amendment, modification or termination of the Plan may be made, and no Participants may be added to the Plan, upon or following a Change in Control if it would have the effect of reducing any benefits earned (including optional forms of distribution) prior to such Change in Control without the written consent of all of the Plan's Participants covered by the Plan at such time. In all events, however, the Company reserves the right to amend, modify or delete the provisions of Section 8 at any time prior to a Change in Control, pursuant to a Board of Directors resolution adopted by a vote of two-thirds (2/3) of the Board of Directors members then serving on the Board of Directors.

SECTION 9. GENERAL PROVISIONS

9.1 Contractual Obligation. It is intended that the Company is under a contractual obligation to make payments from a Participant's DCD Ledger when due. Payment of amounts credited to a Participant's DCD Ledger shall be made out of the general funds of the Company as determined by the Board of Directors without any restriction of the assets of the Company relative to the payment of such contractual obligations; the Plan is, and shall operate as, an unfunded plan.

9.2 Unsecured Interest. No Participant or Beneficiary shall have any interest whatsoever in any specific asset of the Company. To the extent that any person acquires a right to receive payment under this Plan, such right shall be no greater than the right of any unsecured general creditor of the Company.

9.3 "Rabbi" Trust. In connection with this Plan, the Company shall establish a grantor trust (known as the "SCANA Corporation Director Compensation Trust" and referred to herein as the "Trust") for the purpose of accumulating funds to satisfy the obligations incurred by the Company under this Plan (and such other plans and arrangements as determined from time to time by the Company). At any time prior to a Change in Control, as that term is defined in such Trust, the Company may transfer assets to the Trust to satisfy all or part of the obligations incurred by the Company under this Plan, as determined in the sole discretion of the Board of Directors, subject to the return of such assets to the Company at such time as determined in accordance with the terms of such Trust. Any assets of such Trust shall remain at all times subject to the claims of creditors of the Company in the event of the Company's insolvency; and no asset or other funding medium used to pay benefits accrued under the Plan shall result in the Plan being considered as other than "unfunded" under ERISA. Notwithstanding the establishment of the Trust, the right of any Participant to receive future payments under the Plan shall remain an unsecured claim against the general assets of the Company.

9.4 Nonalienation of Benefits.

(a) Subject to Section 6.6, no right or benefit under this Plan shall be subject to anticipation, alienation, sale, assignment, pledge, encumbrance, or charge, and any attempt to anticipate, alienate, sell, assign, pledge, encumber or charge the same shall be void; nor shall any such disposition be compelled by operation of law.

(b) No right or benefit hereunder shall in any manner be liable for or subject to the debts, contracts, liabilities, or torts of the person entitled to benefits under the Plan.

(c) If any Participant or Beneficiary hereunder should become bankrupt or attempt to anticipate, alienate, sell, assign, pledge, encumber, or charge any right or benefit hereunder (other than as permitted in Section 6.6), then such right or benefit shall, in the discretion of the Board of Directors, cease, and the Board of Directors shall direct in such event that the Company hold or apply the same or any part thereof for the benefit of the Participant or Beneficiary in such manner and in such proportion as the Board of Directors may deem proper.

9.5Severability. If any particular provision of the Plan shall be found to be illegal or unenforceable for any reason, the illegality or lack of enforceability of such provision shall not affect the remaining provisions of the Plan, and the Plan shall be construed and enforced as if the illegal or unenforceable provision had not been included.

9.6No Individual Liability. It is declared to be the express purpose and intention of the Plan that no liability whatsoever shall attach to or be incurred by the shareholders, officers, or directors of the Company or any representative appointed hereunder by the Company, under or by reason of any of the terms or conditions of the Plan.

9.7Applicable Law. This Plan shall be governed and construed in accordance with the laws of the State of South Carolina except to the extent governed by applicable Federal law (including the requirements of Code Section 409A). The terms of this Plan are also subject to all present and future rulings of the Securities and Exchange Commission with respect to Rule 16b-3. If any provision of the Plan would cause the Plan to fail to meet the requirements of Rule 16b-3, then that provision of the Plan shall be void and of no effect.

SECTION 10. PLAN ADMINISTRATION, AMENDMENT AND TERMINATION

10.1 In General. This Plan shall be administered by the Company, which shall have the sole authority to construe and interpret the terms and provisions of the Plan and determine the amount, manner and time of payment of any benefits hereunder. The Company shall not exercise any discretion with respect to the administration of this Plan, except as may be permitted by Rule 16b-3. The Company shall maintain records, make the requisite calculations and disburse payments hereunder, and its interpretations, determinations, regulations and calculations shall be final and binding on all persons and parties concerned. The Company may adopt such rules as it deems necessary, desirable or appropriate in administering this Plan.

10.2 Claims Procedure. Any person dissatisfied with the Company's determination of a claim for benefits hereunder must file a written request for reconsideration with the Company (or its delegate). This request must include a written explanation setting forth the specific reasons for such reconsideration. The Company shall review its determination promptly and render a written decision with respect to the claim, setting forth the specific reasons for such denial written in a manner calculated to be understood by the claimant. Such claimant shall be given a reasonable time within which to comment, in writing, to the Company with respect to such explanation. The Company shall review its determination promptly and render a written decision with respect to the claim. Such decision upon matters within the scope of the authority of the Company shall be conclusive, binding, and final upon all claimants under this Plan.

10.3 Finality of Determination. The determination of the Company as to any disputed questions arising under this Plan, including questions of construction and interpretation, shall be final, binding, and conclusive upon all persons.

10.4 Delegation of Authority. The Company may, in its discretion, delegate its duties to a committee of the Board of Directors or an officer or other employee of the Company, or to a committee composed of officers or employees of the Company.

10.5 Expenses. The cost of payment from this Plan and the expenses of administering the Plan shall be borne by the Company.

10.6 Tax Withholding. The Company shall have the right to deduct from all payments made from the Plan any federal, state, or local taxes required by law to be withheld with respect to such payments.

10.7 Incompetency. Any person receiving or claiming benefits under the Plan shall be conclusively presumed to be mentally competent and of age until the Company receives written notice, in a form and manner acceptable to it, that such person is incompetent or a minor, and that a guardian, conservator, statutory committee under the South Carolina Code of Laws, or other person legally vested with the care of his estate has been appointed. In the event that the Company finds that any person to whom a benefit is payable under the Plan is unable to properly care for his affairs, or is a minor, then any payment due (unless a prior claim therefor shall have been made by a duly appointed legal representative) may be paid to the spouse, a child, a parent, or a brother or sister, or to any person deemed by the Company to have incurred expense for the care of such person otherwise entitled to payment.

In the event a guardian or conservator or statutory committee of the estate of any person receiving or claiming benefits under the Plan shall be appointed by a court of competent jurisdiction, payments shall be made to such guardian or conservator or statutory committee provided that proper proof of appointment is furnished in a form and manner suitable to the Company. Any payment made under the provisions of this Section 10.7 shall be a complete discharge of liability therefor under the Plan.

10.8Action by Company. Any action required or permitted to be taken hereunder by the Company or its Board of Directors shall be taken by the Board of Directors, or by any person or persons authorized by the Board of Directors.

10.9Notice of Address. Any payment made to a Participant or to his Beneficiary at the last known post office address of the distributee on file with the Company, shall constitute a complete acquittance and discharge to the Company and any director or officer with respect thereto, unless the Company shall have received prior written notice of any change in the condition or status of the distributee. Neither the Company nor any director or officer shall have any duty or obligation to search for or ascertain the whereabouts of the Participant or his Beneficiary.

10.10Amendment and Termination. The Company expects the Plan to be permanent but, since future conditions affecting the Company cannot be anticipated or foreseen, the Company reserves the right to amend, modify, or terminate the Plan at any time by action of its Board of Directors, subject to Section 8.2 and the requirements of Code Section 409A with respect to post-DCD Ledgers, (including, but not limited to, as may be necessary to ensure compliance with Rule 16b-3); provided, however, that any such action shall not diminish retroactively any amounts which have been credited to any Participant's DCD Ledger. If the Board of Directors amends the Plan to cease future deferrals hereunder or terminates the Plan, the Board of Directors may, in its sole discretion, direct that the value of each Participant's DCD Ledger be paid to each Participant (or Beneficiary, if applicable) in an immediate lump sum payment. In the absence of any such direction from the Board of Directors, the Plan shall continue as a "frozen" plan under which no future deferrals will be recognized (however, Growth Increments and dividends attributable to hypothetical shares of Company Stock credited to each Participant's Company Stock Ledger shall continue to be recognized) and each Participant's benefits shall be paid in accordance with the otherwise applicable terms of the Plan.

10.11Plan to Comply with Code Section 409A. Notwithstanding any provision to the contrary in this Plan, each provision of this Plan shall be interpreted to permit Director deferrals and the payment of deferred amounts in accordance with Code Section 409A and any provision that would conflict with such requirements shall not be valid or enforceable.

SECTION 11. EXECUTION

IN WITNESS WHEREOF, the Company has caused this SCANA Corporation Director Compensation and Deferral Plan to be executed by its duly authorized officer to be effective on the 30th day of November, 2014.

Exhibit 31.01

CERTIFICATION

I, Kevin B. Marsh, certify that:

1. I have reviewed this annual report on Form 10-K of SCANA Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and

5. The registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant’s auditors and the audit committee of the registrant’s board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant’s ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant’s internal control over financial reporting.

Kevin B. Marsh, Chairman of the Board, President,
Chief Executive Officer and Chief Operating Officer

Exhibit 31.02

CERTIFICATION

I, Jimmy E. Addison, certify that:

1. I have reviewed this annual report on Form 10-K of SCANA Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

CERTIFICATION

I, Kevin B. Marsh, certify that:

1. I have reviewed this annual report on Form 10-K of South Carolina Electric & Gas Company;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).
SCANA Corporation Yes ☒ No ☐ South Carolina Electric & Gas Company Yes ☒ No ☐

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.
SCANA Corporation ☒ South Carolina Electric & Gas Company ☒

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company (as defined in Exchange Act Rule 12b-2).

SCANA Corporation	Large accelerated filer ☒	Accelerated filer ☐	Non-accelerated filer ☐	Smaller reporting company ☐
South Carolina Electric & Gas Company	Large accelerated filer ☐	Accelerated filer ☐	Non-accelerated filer ☒	Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Exchange Act Rule 12b-2).
SCANA Corporation Yes ☐ No ☒ South Carolina Electric & Gas Company Yes ☐ No ☒

The aggregate market value of voting stock held by non-affiliates of SCANA Corporation was $10.8 billion at June 30, 2016, the last business day of the registrant's most recently completed second fiscal quarter, based on the closing price of $75.66 per share. South Carolina Electric & Gas Company is a wholly-owned subsidiary of SCANA Corporation and has no voting stock other than its common stock, all of which is held beneficially and of record by SCANA Corporation. A description of registrants' common stock follows:

Registrant	Description of Common Stock	Shares Outstanding at February 20, 2017
SCANA Corporation	Without Par Value	142,916,917
South Carolina Electric & Gas Company	Without Par Value	40,296,147

Documents incorporated by reference: Specified sections of SCANA Corporation's Proxy Statement, in connection with its 2017 Annual Meeting of Shareholders, are incorporated by reference in Part III hereof.

This combined Form 10-K is separately filed by SCANA Corporation and South Carolina Electric & Gas Company. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. South Carolina Electric & Gas Company makes no representation as to information relating to SCANA Corporation or its subsidiaries (other than South Carolina Electric & Gas Company and its consolidated affiliates).

South Carolina Electric & Gas Company meets the conditions set forth in General Instruction I(1) (a) and (b) of Form 10-K and therefore is filing this Form with the reduced disclosure format allowed under General Instruction I(2).

TABLE OF CONTENTS

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

Statements included in this Annual Report on Form 10-K which are not statements of historical fact are intended to be, and are hereby identified as, “forward-looking statements” for purposes of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements include, but are not limited to, statements concerning key earnings drivers, customer growth, environmental regulations and expenditures, leverage ratio, projections for pension fund contributions, financing activities, access to sources of capital, impacts of the adoption of new accounting rules and estimated construction and other expenditures. In some cases, forward-looking statements can be identified by terminology such as “may,” “will,” “could,” “should,” “expects,” “forecasts,” “plans,” “anticipates,” “believes,” “estimates,” “projects,” “predicts,” “potential” or “continue” or the negative of these terms or other similar terminology. Readers are cautioned that any such forward-looking statements are not guarantees of future performance and involve a number of risks and uncertainties, and that actual results could differ materially from those indicated by such forward-looking statements. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, but are not limited to, the following:

(1) the information is of a preliminary nature and may be subject to further and/or continuing review and adjustment;
(2) legislative and regulatory actions, particularly changes related to electric and gas services, rate regulation, regulations governing electric grid reliability and pipeline integrity, environmental regulations, and actions affecting the construction of new nuclear units;
(3) current and future litigation;
(4) changes in the economy, especially in areas served by subsidiaries of SCANA;
(5) the impact of competition from other energy suppliers, including competition from alternate fuels in industrial markets;
(6) the impact of conservation and demand side management efforts and/or technological advances on customer usage;
(7) the loss of sales to distributed generation, such as solar photovoltaic systems or energy storage systems;
(8) growth opportunities for SCANA’s regulated and other subsidiaries;
(9) the results of short- and long-term financing efforts, including prospects for obtaining access to capital markets and other sources of liquidity;
(10) the effects of weather, especially in areas where the generation and transmission facilities of SCANA and its subsidiaries (the Company) are located and in areas served by SCANA’s subsidiaries;
(11) changes in SCANA’s or its subsidiaries’ accounting rules and accounting policies;
(12) payment and performance by counterparties and customers as contracted and when due;
(13) the results of efforts to license, site, construct and finance facilities for electric generation and transmission, including nuclear generating facilities;
(14) the results of efforts to operate the Company's electric and gas systems and assets in accordance with acceptable performance standards, including the impact of additional distributed generation and nuclear generation;
(15) maintaining creditworthy joint owners for SCE&G’s new nuclear generation project;
(16) the creditworthiness and/or financial stability of contractors for SCE&G's new nuclear generation project, particularly in light of adverse financial developments disclosed by Toshiba;
(17) the ability of suppliers, both domestic and international, to timely provide the labor, secure processes, components, parts, tools, equipment and other supplies needed, at agreed upon quality and prices, for our construction program, operations and maintenance;
(18) the results of efforts to ensure the physical and cyber security of key assets and processes;
(19) the availability of fuels such as coal, natural gas and enriched uranium used to produce electricity; the availability of purchased power and natural gas for distribution; the level and volatility of future market prices for such fuels and purchased power; and the ability to recover the costs for such fuels and purchased power;
(20) the availability of skilled, licensed and experienced human resources to properly manage, operate, and grow the Company’s businesses;
(21) labor disputes;
(22) performance of SCANA’s pension plan assets and the effect(s) of associated discount rates;
(23) changes in tax laws and realization of tax benefits and credits, including production tax credits for new nuclear units, and the ability or inability to realize credits and deductions;
(24) inflation or deflation;
(25) changes in interest rates;
(26) compliance with regulations;
(27) natural disasters and man-made mishaps that directly affect our operations or the regulations governing them; and
(28) the other risks and uncertainties described from time to time in the reports filed by SCANA or SCE&G with the SEC.

SCANA and SCE&G disclaim any obligation to update any forward-looking statements.

DEFINITIONS

Abbreviations used in this Form 10-K have the meanings set forth below unless the context requires otherwise:

PART I

ITEM 1. BUSINESS

INVESTOR INFORMATION

SCANA’s and SCE&G’s annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed with or furnished to the SEC are available free of charge through SCANA’s internet website at *www.scana.com* (which is not intended as an active hyperlink; the information on SCANA’s website is not a part of this report or any other report or document that SCANA or SCE&G files with or furnishes to the SEC) as soon as reasonably practicable after these reports are filed or furnished.

SCANA and SCE&G post information from time to time regarding developments relating to SCE&G’s new nuclear project and other matters of interest to investors on SCANA’s website. On SCANA’s homepage, there is a yellow box containing links to the Nuclear Development and Other Investor Information sections of the website. The Nuclear Development section contains a yellow box with a link to project news and updates. The Other Investor Information section of the website contains a link to recent investor-related information that cannot be found at other areas of the website. Some of the information that will be posted from time to time, including the quarterly reports that SCE&G submits to the SCPSC and the ORS in connection with the new nuclear project, may be deemed to be material information that has not otherwise become public. Investors, media and other interested persons are encouraged to review this information and can sign up, under the Investor Relations Section of the website, for an email alert when there is a new posting in the Nuclear Development and Other Investor Information yellow box.

CORPORATE STRUCTURE AND SEGMENTS OF BUSINESS

SCANA is a South Carolina corporation created in 1984 as a holding company. SCANA and its subsidiaries had full-time, permanent employees of 5,910 as of February 20, 2017 and 5,829 as of February 19, 2016. SCANA does not directly own or operate any significant physical properties, but it holds directly all of the capital stock of its subsidiaries, including the subsidiaries described below.

Regulated Utilities

SCE&G is engaged in the generation, transmission, distribution and sale of electricity to approximately 709,000 customers and the purchase, sale and transportation of natural gas to approximately 358,000 customers (each as of December 31, 2016). SCE&G’s business experiences seasonal fluctuations, with generally higher sales of electricity during the summer and winter months because of air conditioning and heating requirements, and generally higher sales of natural gas during the winter months due to heating requirements. SCE&G’s electric service territory extends into 24 counties covering nearly 16,000 square miles in the central, southern and southwestern portions of South Carolina. The service area for natural gas encompasses all or part of 35 counties in South Carolina and covers approximately 23,000 square miles. More than 3.4 million persons live in the counties where SCE&G conducts its business. Resale customers include municipalities, electric cooperatives, other investor-owned utilities, registered marketers and federal and state electric agencies. Predominant industries served by SCE&G include chemicals, educational services, paper products, food products, lumber and wood products, health services, textile manufacturing, rubber and miscellaneous plastic products, automotive and tire and fabricated metal products.

GENCO owns Williams Station and sells electricity, pursuant to a FERC-approved tariff, solely to SCE&G under the terms of a unit power sales agreement and related operating agreement. Fuel Company acquires, owns and provides financing for SCE&G's nuclear fuel, certain fossil fuels and emission allowances.

PSNC Energy purchases, sells and transports natural gas to approximately 550,000 residential, commercial and industrial customers (as of December 31, 2016). PSNC Energy serves 28 franchised counties covering approximately 12,000 square miles in North Carolina. The predominant industries served by PSNC Energy include educational services, food products, health services, automotive, chemicals, non-woven textiles, electrical generation and construction.

Nonregulated Businesses

SCANA Energy markets natural gas in the southeast and provides energy-related services. A division of SCANA Energy sells natural gas to approximately 450,000 customers (as of December 31, 2016) in Georgia’s deregulated natural gas market.

SCANA Services, Inc. provides administrative and management services to SCANA's other subsidiaries.

For information with respect to major segments of business, see Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 12 of the consolidated financial statements. All such information is incorporated herein by reference.

ELECTRIC OPERATIONS

Electric Sales

SCE&G's sales of electricity and margins earned from those sales by customer classification as percentages of electric revenues were as follows:

	Sales		Margins	
Customer Classification	**2016**	**2015**	**2016**	**2015**
Residential	46%	45%	50%	50%
Commercial	33%	33%	33%	33%
Industrial	17%	17%	14%	14%
Sales for resale	2%	2%	1%	1%
Other	2%	3%	2%	2%
Total	100%	100%	100%	100%

Sales for resale include sales to three municipalities and one electric cooperative. Short-term system sales and margins were not significant for either period presented.

During 2016 SCE&G experienced a net increase of approximately 11,000 electric customers (growth rate of 1.6%), increasing its total number of electric customers to approximately 709,000 at year end.

The following projections assume normal weather where applicable. For the period 2016 to 2017, SCE&G projects a retail kWh sales decrease of approximately 0.1% and customer growth of 1.5%. For the period 2017-2019, SCE&G projects total territorial kWh sales of electricity to increase 0.3% annually, total retail sales to grow 0.3% annually, total electric customer base to increase 1.6% annually and territorial peak load (summer, in MW) to increase 1.6% annually. SCE&G's goal is to maintain a planning reserve margin of between 14% and 20%; however, weather and other factors affect territorial peak load and can cause actual generating capacity on any given day to fall below the reserve margin goal.

Electric Interconnections

SCE&G purchases all of the electric generation of GENCO's Williams Station under a unit power sales agreement which has been approved by FERC. Williams Station has a net generating capacity (summer rating) of 605 MW.

SCE&G's transmission system extends over a large part of the central, southern and southwestern portions of South Carolina. The system interconnects with Duke Energy Carolinas, LLC, Duke Energy Progress, LLC, Santee Cooper, Georgia Power Company and the Southeastern Power Administration's Clarks Hill (Thurmond) Project. SCE&G is a member of VACAR, one of several geographic divisions within the SERC. SERC is one of eight regional entities with delegated authority from NERC for the purpose of proposing and enforcing reliability standards approved by FERC. The regional entities and all members of NERC work to safeguard the reliability of the bulk power systems throughout North America.

Fuel Costs and Fuel Supply

The average cost of various fuels and the weighted average cost of all fuels (including oil) were as follows:

	Cost of Fuel Used		
	2016	2015	2014
Per MMBTU:			
Nuclear	$ 0.98	$ 0.95	$ 1.01
Coal	3.41	3.81	3.90
Natural Gas	3.02	3.26	5.19
All Fuels (weighted average)	2.41	3.01	3.62
Per Ton: Coal	84.62	95.69	96.74
Per MCF: Gas	3.11	3.35	5.30

For a listing of the Company's generating facilities, see the Electric Properties section within Item 2. Properties. For information on actual and projected sources and percentages of total MWh generation by each category of fuel, see Electric Operations - Environmental within the Overview section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

In 2016, coal was primarily obtained through long-term contracts with suppliers located in eastern Kentucky, Tennessee, Virginia, and West Virginia. These contracts provide for approximately 1.4 million tons annually. Sulfur restrictions on the contract coal range from 1.0% to 1.6%. These contracts expire at various times through 2018. Spot market purchases may occur when needed or when prices are believed to be favorable. The Company relies on unit trains and, in some cases, trucks and barges for coal deliveries.

SCANA and SCE&G believe that electric operations comply with all applicable regulations relating to the discharge of SO_2 and NO_X . See additional discussion at Environmental Matters in Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

SCE&G, for itself and as agent for Santee Cooper, and WEC are parties to a fuel alliance agreement and contracts for fuel fabrication and related services. Under these contracts, SCE&G supplies enriched products to WEC and WEC supplies nuclear fuel assemblies for Unit 1 and is under contract to supply assemblies for the New Units. WEC will be SCE&G’s exclusive provider of such fuel assemblies on a cost-plus basis. The fuel assemblies to be delivered under the contracts are expected to supply the nuclear fuel requirements of Unit 1 and the New Units through 2033. SCE&G is dependent upon WEC for providing fuel assemblies for the new AP1000 reactors in the New Units in the current and anticipated future absence of other commercially viable sources.

In addition, SCE&G has contracts covering its nuclear fuel needs for uranium, conversion services and enrichment services. These contracts have varying expiration dates through 2024. SCE&G believes that it will be able to renew contracts as they expire or enter into similar contractual arrangements with other suppliers of nuclear fuel materials and services and that sufficient capacity for nuclear fuel supplies and processing exists to preclude the impairment of normal operations of its nuclear generating units.

SCE&G stores spent nuclear fuel in its on-site spent-fuel pool, and has constructed a dry cask storage facility to accommodate the spent fuel output for the life of Unit 1. In addition, Unit 1 has sufficient on-site capacity to permit storage of the entire reactor core in the event that complete unloading should become desirable or necessary. For information about the contract with the DOE regarding disposal of spent fuel, see the Environmental section of Note 10 to the consolidated financial statements.

SCE&G also uses long-term power purchase agreements to ensure that adequate power supply resources are in place to meet load obligations and reserve requirements. As of January 1, 2017, SCE&G had such agreements in place for 325 MW of capacity (expiring at various times through 2020). In addition, SCE&G had the ability to purchase an additional 204 MW of capacity under these agreements.

GAS OPERATIONS

Gas Sales-Regulated

Regulated sales of natural gas by customer classification as a percent of total regulated gas revenues sold or transported were as follows:

	SCANA		SCE&G	
Customer Classification	**2016**	**2015**	**2016**	**2015**
Residential	57.9%	57.0%	48.3%	47.9%
Commercial	26.4%	26.8%	28.6%	28.0%
Industrial	10.4%	11.0%	19.5%	20.6%
Transportation Gas	5.3%	5.2%	3.6%	3.5%
Total	100.0%	100.0%	100.0%	100.0%

For the period 2017-2019, SCANA projects total consolidated sales of regulated natural gas in MMBTUs to increase 4.1% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.5%, commercial of 0.8% and industrial of 10.7%.

For the period 2017-2019, SCE&G projects total consolidated sales of regulated natural gas in MMBTUs to increase 2.7% annually (excluding transportation and assuming normal weather). Annual projected increases over such period in MMBTU sales include residential of 2.4%, commercial of 0.7% and industrial of 4.3%.

For the period 2017-2019, each of SCANA's and SCE&G's total regulated natural gas customer base is projected to increase 2.6% annually. During 2016, SCANA recorded a net increase of approximately 26,000 regulated gas customers (growth rate of 2.9%), increasing the number of its regulated gas customers to approximately 907,000. Of this increase, SCE&G recorded a net increase of approximately 10,000 gas customers (growth rate of 2.9%), increasing the number of its total gas customers to approximately 358,000 (as of December 31, 2016).

Demand for gas changes primarily due to weather and the price relationship between gas and alternate fuels.

Gas Cost and Supply

SCE&G purchases natural gas under contracts with producers and marketers on both a short-term and long-term basis at market based prices. The gas is delivered to South Carolina through firm transportation agreements with Southern Natural (expiring in 2018), Transco (expiring at various times through 2031) and DCGT (expiring at various times through 2036). The maximum daily volume of gas that SCE&G is entitled to transport under these contracts is 212,194 MMBTU from Southern Natural, 104,652 MMBTU from Transco and 461,727 MMBTU from DCGT. Additional natural gas volumes may be delivered to SCE&G's system as capacity is available through interruptible transportation.

The daily volume of gas that SCANA Energy is entitled to transport under its service agreements (expiring at various times through 2023) on a firm basis is 771,627 MMBTU. Additional natural gas volumes may be delivered as capacity is available through interruptible transportation.

SCE&G purchased natural gas, including fixed transportation, at an average cost of $3.46 per MMBTU during 2016 and $3.67 per MMBTU during 2015.

To meet the requirements of its high priority natural gas customers during periods of maximum demand, SCE&G has 5,502,600 MMBTU of natural gas storage capacity on the systems of Southern Natural and Transco. Approximately 3,806,800 MMBTU of gas were in storage on December 31, 2016. SCE&G supplements its supplies of natural gas with two LNG storage facilities, one of which has liquefaction capability. Approximately 1,833,400 MMBTU (liquefied equivalent) of gas were in storage on December 31, 2016. For a discussion of SCE&G's natural gas storage capacity, see Item 2. Properties.

PSNC Energy purchases natural gas under contracts with producers and marketers on a short-term basis at market based prices and on a long-term basis for reliability assurance at first of the month index prices plus a reservation charge in certain cases. Transco transports natural gas to North Carolina through transportation agreements with varying expiration dates through 2031. On a peak day, PSNC Energy is capable of receiving daily transportation volumes of natural gas under these contracts, utilizing firm contracts of 710,062 MMBTU from Transco.

PSNC Energy purchased natural gas, including fixed transportation, at an average cost of $3.73 per MMBTU during 2016 compared to $4.12 per MMBTU during 2015.

To meet the requirements of its high priority natural gas customers during periods of maximum demand, PSNC Energy supplements its supplies of natural gas with underground natural gas storage services and LNG peaking services. Underground natural gas storage service agreements with Dominion Transmission, Inc., Columbia Gas Transmission, Transco and Spectra Energy provide for storage capacity of approximately 13,000,000 MMBTU. Approximately 9,000,000 MMBTU of gas were in storage under these agreements at December 31, 2016. PSNC Energy also maintains LNG storage service agreements with Transco, Cove Point LNG and Pine Needle LNG which provides 1,300,000 MMBTU (liquefied equivalent) of storage space. Approximately 1,100,000 MMBTU (liquefied equivalent) were in storage under these agreements at December 31, 2016. Approximately 900,000 MMBTU (liquefied equivalent) of gas were in storage at PSNC Energy's LNG storage facility at December 31, 2016. For a discussion of PSNC Energy's LNG storage capacity, see Item 2. Properties.

SCANA and SCE&G believe that supplies under long-term contracts and supplies available for spot market purchase are adequate to meet existing customer demands and to accommodate growth.

Gas Marketing-Nonregulated

SCANA Energy markets natural gas and provides energy-related services in the Southeast. In addition, a division of SCANA Energy markets natural gas to approximately 450,000 customers (as of December 31, 2016) in Georgia’s natural gas market. Georgia’s natural gas market includes approximately 1.6 million customers.

Risk Management

For a discussion of risk management policies and procedures, see Note 6 to the consolidated financial statements.

REGULATION

Regulatory jurisdictions to which SCANA and its subsidiaries are subject are described in the Regulatory Matters section of Management's Discussion and Analysis of Financial Condition and Results of Operations.

SCE&G has obtained FERC authority to issue short-term indebtedness and to assume liabilities as a guarantor(pursuant to Section 204 of the Federal Power Act). SCE&G may issue unsecured promissory notes, commercial paper and direct loans in amounts not to exceed $1.6 billion outstanding with maturity dates of one year or less, and may enter into guaranty agreements in favor of lenders, bankers, and dealers in commercial paper in amounts not to exceed $600 million. GENCO has obtained FERC authority to issue short-term indebtedness not to exceed $200 million outstanding with maturity dates of one year or less. The authority described herein will expire in October 2018.

SCE&G holds licenses under the Federal Power Act for each of its hydroelectric projects. The licenses expire as follows:

Project	License Expiration
Saluda (Lake Murray)	*
Fairfield Pumped Storage/Parr Shoals	2020
Stevens Creek	2025
Neal Shoals	2036

* SCE&G operates the Saluda hydroelectric project under an annual license while its long-term re-licensing application is being reviewed by FERC.

At the termination of a license under the Federal Power Act, FERC may extend or issue a new license to the previous licensee, or may issue a license to another applicant, or the federal government may take over the related project. If the federal government takes over a project or if FERC issues a license to another applicant, the federal government or the new licensee, as the case may be, must pay the previous licensee an amount equal to its net investment in the project, not to exceed fair value, plus severance damages.

RATE MATTERS

For a discussion of the impact of various rate matters, see the Regulatory Matters section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, and Note 2 to the consolidated financial statements.

Fuel Cost Recovery Procedures

The SCPSC's fuel cost recovery procedure determines the fuel component in SCE&G's retail electric base rates annually based on projected fuel costs for the ensuing 12-month period, adjusted for any over-collection or under-collection from the preceding 12-month period. The statutory definition of fuel costs includes certain variable environmental costs, such as ammonia, lime, limestone and catalysts consumed in reducing or treating emissions, and the cost of emission allowances used for SO_2, NO_X, mercury and particulates. In addition, the statutory definition of fuel cost allows electric utilities to recover avoided costs under the Public Utility Regulatory Policy Act of 1978, as well as costs incurred as a result of offering DER and net metering programs to its customers. SCE&G may request a formal proceeding concerning its fuel costs at any time.

Fuel cost recovery procedures related to the Company's natural gas operations along with related rate proceedings by the SCPSC and NCUC are described in Note 2 to the consolidated financial statements.

ENVIRONMENTAL MATTERS

Federal and state authorities have imposed environmental regulations and standards relating primarily to air emissions, wastewater discharges and solid, toxic and hazardous waste management. Developments in these areas may require that equipment and facilities be modified, supplemented or replaced. The ultimate effect of any new or pending regulations or standards upon existing operations cannot be predicted. For a discussion of how these regulations and standards may impact SCANA and SCE&G (including capital expenditures necessitated thereby), see the Environmental Matters section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 10 to the consolidated financial statements.

OTHER MATTERS

Insurance coverage for SCE&G's nuclear units is described in Note 10 to the consolidated financial statements.

For a discussion of the impact of competition, see the Overview section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

For a discussion of cash requirements for construction and nuclear fuel expenditures, contractual cash obligations, financing limits, financing transactions and other related information, see the Liquidity and Capital Resources section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 1A. RISK FACTORS

The risk factors that follow relate in each case to the Company, and where indicated the risk factors also relate to Consolidated SCE&G.

The costs of large capital projects, such as the Company's and Consolidated SCE&G's construction for environmental compliance and its construction of the New Units and associated transmission infrastructure, are significant and these projects are subject to a number of risks and uncertainties that may adversely affect the cost, timing and completion of these projects.

The Company's and Consolidated SCE&G's businesses are capital intensive and require significant investments in energy generation and in other internal infrastructure projects, including projects for environmental compliance. In particular, SCE&G and Santee Cooper have agreed to jointly own, contract the design and construction of, and operate the New Units, which will be two 1,250 MW (1,117 MW, net) nuclear units at SCE&G's Summer Station, in pursuit of which they have committed and are continuing to commit significant resources. In addition, construction of significant new transmission infrastructure is necessary to support the New Units and is under way as an integral part of the project. Achieving the intended benefits of any large construction project is subject to many uncertainties. For instance, the ability to adhere to established budgets and construction schedules may be affected by many variables, such as the regulatory, legal, training and construction processes associated with securing approvals, permits and licenses and necessary amendments to them within projected timeframes, the availability of labor and materials at estimated costs, the availability and cost of financing, and weather. There also may be contractor or supplier performance issues or adverse changes in their creditworthiness and/or financial stability, unforeseen difficulties meeting critical regulatory requirements, contract disputes and litigation, and changes in key contractors or subcontractors. There may be unforeseen engineering problems or unanticipated changes in project design or scope. Our ability to complete construction projects (including new baseload generation) as well as our ability to maintain current operations at reasonable cost could be affected by the availability of key components or commodities, increases in the price of or the unavailability of labor, commodities or other materials, increases in lead times for components, adverse changes in applicable laws and regulations, new or enhanced environmental or regulatory requirements, supply chain failures (whether resulting from the foregoing or other factors), and disruptions in the transportation of components, commodities and fuels. Some of the foregoing issues have been experienced in the construction of the New Units. A discussion of certain of those matters can be found under New Nuclear Construction in Note 10 to the consolidated financial statements.

Should the construction of the New Units materially and adversely deviate from the SCPSC-approved schedules (by more than 18 months), estimates, and projections, the SCPSC could disallow the additional capital costs that result from the deviations to the extent that it is deemed that the Company's failure to anticipate or avoid the deviation, or to minimize the resulting expenses, was imprudent, considering the information available at the time that the Company could have acted to avoid the deviation or minimize its effect. Depending upon the magnitude of any such disallowed capital costs, the Company could be moved to evaluate the prudency of continuation, adjustment to, or termination of the project.

Furthermore, jointly owned projects, such as the current construction of the New Units, are subject to risks including that one or more of the joint owners becomes either unable or unwilling to continue to fund project financial commitments, that new joint owners cannot be secured at equivalent financial terms, or that changes in the joint ownership make-up will increase project costs and/or delay the completion.

To the extent that delays occur, costs become unrecoverable, or we otherwise become unable to effectively manage and complete our capital projects, our results of operations, cash flows and financial condition, as well as our qualifications for applicable governmental programs and benefits, such as production tax credits, may be adversely affected.

Recent announcements by Toshiba, the parent company of WEC and the guarantor of WEC's payment obligations with respect to the above construction project for New Units at SCE&G's Summer Station, related to deterioration in its financial position and liquidity indicate heightened risks and substantial uncertainties with respect to the cost, timing, construction and/or completion of the New Units.

Following several announcements and related media reports, on February 14, 2017, Toshiba, the parent company of WEC and the guarantor of its payment obligations with respect to the EPC Contract, announced that it expects to record a multi-billion dollar impairment loss associated with the construction of the New Units and the two additional AP1000 units being constructed by WEC for another company in the United States.

In December 2015, WEC acquired 100% of the shares of Stone & Webster from CB&I. On December 27, 2016, Toshiba announced the possibility that the goodwill resulting from the transaction would reach a level of several billion U.S. dollars and would be impaired, leaving Toshiba with negative shareholders' equity. The increase to the amount of goodwill resulted from WEC's analysis that demonstrated the cost to complete the four Westinghouse AP1000 new nuclear plants in the United States would far surpass the original estimates for construction. In public statements in 2017, Toshiba attributed the cost overruns to, among other things, higher labor costs arising from lower than anticipated work efficiency and the inability to improve such work efficiency over time. While the final figures related to the impairment remain subject to adjustment, Toshiba's February 14, 2017 announcement indicated it anticipates it will record a loss in excess of $6 billion.

Toshiba's credit ratings, already below investment grade following disclosures of accounting and internal control irregularities in 2015, were further reduced in January 2017, and the Company and Consolidated SCE&G expect that Toshiba will continue to experience negative financial repercussions resulting from these developments. In response, Toshiba has announced, among other things, its plan to monetize portions of its businesses to generate cash. It has also indicated that it will not take on future nuclear construction projects and that it will significantly alter its risk management oversight of its nuclear business. The ability of WEC and Toshiba to successfully respond to these developments will continue to impact Toshiba's credit ratings, creditworthiness, financial stability and viability. There can be no assurance that Toshiba's or WEC's actions will be sufficient such that Toshiba's lenders and creditors will continue to provide necessary liquidity. In particular, these losses raise uncertainty with respect to Toshiba's ability to perform under its guaranty of WEC's payment obligations to the Company and Consolidated SCE&G, and further highlight the risks to the Company and Consolidated SCE&G related to the construction schedule and WEC's ability to continue with and/or complete the construction of the New Units. Adverse changes in contracts, contractors and subcontractors, and to the project schedule could result. Additionally, contractual disputes and litigation could follow.

In addition to the project risks highlighted in Toshiba's disclosures surrounding the large losses described above, additional risks and uncertainties regarding the project schedule are evident. In February 2017, WEC notified the Company and Consolidated SCE&G that the contractual guaranteed substantial completion dates of August 2019 and 2020 for Unit 2 and Unit 3, respectively, which were reflected in the October 2015 Amendment, are not likely to be met. Instead, revised substantial completion dates of April 2020 and December 2020 are reflected within WEC's revised project schedule. While these later dates remain within the SCPSC-approved 18-month contingency periods provided for under the BLRA, and achievement of such dates would also allow the output of both units to qualify, under current law, for federal production tax credits, there remains substantial uncertainty as to WEC's ability to meet these dates given its historical inability to meet forecasted productivity and work force efficiency levels.

SCE&G and Santee Cooper, the co-owner of the New Units, continue to evaluate various actions which might be taken in the event that Toshiba and WEC are unable or unwilling to complete the project. These include completing the work under any of several arrangements with other contractors or, were it determined to be prudent, halting the project, leaving SCE&G to pursue cost recovery under the abandonment provisions of the BLRA. Any significant delay in the timing of construction or any determination by the SCPSC to disallow the recovery of costs would adversely impact the Company's and Consolidated SCE&G's results of operations, cash flows and financial condition.

Commodity price changes, delays in delivery of commodities, commodity availability and other factors may affect the operating cost, capital expenditures and competitive positions of the Company's and Consolidated SCE&G's energy businesses, thereby adversely impacting results of operations, cash flows and financial condition.

Our energy businesses are sensitive to changes in coal, natural gas, uranium and other commodity prices (as well as their transportation costs), availability and deliverability. Any such changes could affect the prices these businesses charge, their operating costs, and the competitive position of their products and services. Consolidated SCE&G is permitted to recover the prudently incurred cost of purchased power and fuel (including transportation) used in electric generation through retail customers' bills, but purchased power and fuel cost increases affect electric prices and therefore the competitive position of electricity against other energy sources. In addition, when natural gas prices are low enough relative to coal to result in the dispatch of gas-fired electric generation ahead of coal-fired electric generation, higher inventories of coal, with related increased carrying costs, may result. This may adversely affect our results of operations, cash flows and financial condition.

In the case of regulated natural gas operations, costs prudently incurred for purchased gas and pipeline capacity may be recovered through retail customers' bills. However, in both our regulated and deregulated natural gas markets, increases in gas costs affect total retail prices and therefore the competitive position of gas relative to electricity and other forms of energy. Accordingly, customers able to do so may switch to alternate forms of energy and reduce their usage of gas from the Company and Consolidated SCE&G. Customers on a volumetric rate structure unable to switch to alternate fuels or suppliers may reduce their usage of gas from the Company and Consolidated SCE&G. A regulatory mechanism applies to residential and commercial customers at PSNC Energy to mitigate the earnings impact of an increase or decrease in gas usage.

Certain construction-related commodities, such as copper and aluminum used in our transmission and distribution lines and in our electrical equipment, and steel, concrete and rare earth elements, have experienced significant price fluctuations due to changes in worldwide demand. To operate our air emissions control equipment, we use significant quantities of ammonia, limestone and lime. With EPA-mandated industry-wide compliance requirements for air emissions controls, increased demand for these reagents, combined with the increased demand for low sulfur coal, may result in higher costs for coal and reagents used for compliance purposes.

The use of derivative instruments could result in financial losses and liquidity constraints. The Company and Consolidated SCE&G do not fully hedge against financial market risks or price changes in commodities. This could result in increased costs, thereby resulting in lower margins and adversely affecting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G use derivative instruments, including futures, forwards, options and swaps, to manage our financial market risks. The Company also uses such derivative instruments to manage certain commodity (i.e., natural gas) market risk. We could be required to provide cash collateral or recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities and financial contracts or if a counterparty fails to perform under a contract.

The Company strives to manage commodity price exposure by establishing risk limits and utilizing various financial instruments (exchange traded and over-the-counter instruments) to hedge physical obligations and reduce price volatility. We do not hedge the entire exposure of our operations from commodity price volatility. To the extent we do not hedge against commodity price volatility or our hedges are not effective, results of operations, cash flows and financial condition may be adversely impacted.

Changing and complex laws and regulations to which the Company and Consolidated SCE&G are subject could adversely affect revenues, increase costs, or curtail activities, thereby adversely impacting results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G operate under the regulatory authority of the United States government and its various regulatory agencies, including the FERC, NRC, SEC, IRS, EPA, the Department of Homeland Security, CFTC and PHMSA. In addition, the Company and Consolidated SCE&G are subject to regulation by the state governments of South Carolina, North Carolina and Georgia via regulatory agencies, state environmental agencies, and state employment commissions. Accordingly, the Company and Consolidated SCE&G must comply with extensive federal, state and local laws and regulations. Such governmental oversight and regulation broadly and materially affect the operation of our businesses. In addition to many other aspects of our businesses, these requirements impact the services mandated or offered to our customers, and the licensing, siting, construction and operation of facilities. They affect our management of safety, the reliability of our electric and natural gas systems, the physical and cyber security of key assets, customer conservation through DSM Programs, information security, the issuance of securities and borrowing of money, financial reporting, interactions among affiliates, the payment of dividends and employment programs and practices. Changes to governmental regulations are continual and potentially costly to effect compliance. Non-compliance with these requirements by third parties, such as our contractors, vendors and agents, may subject the Company and Consolidated SCE&G to operational risks and to liability. We cannot predict the future course of changes in this regulatory environment or the ultimate effect that this changing regulatory environment will have on the Company's or Consolidated SCE&G's businesses. Non-compliance with these laws and regulations could result in fines, litigation, loss of licenses or permits, mandated capital expenditures and other adverse business outcomes, as well as reputational damage, which could adversely affect the cash flows, results of operations, and financial condition of the Company and Consolidated SCE&G.

Furthermore, changes in or uncertainty in monetary, fiscal, or regulatory policies of the Federal government may adversely affect the debt and equity markets and the economic climate for the nation, region or particular industries, such as ours or those of our customers. The Company and Consolidated SCE&G could be adversely impacted by changes in tax policy, such as the loss of production tax credits related to the construction of the New Units.

The Company and Consolidated SCE&G are subject to extensive rate regulation which could adversely affect operations. Large capital projects, results of DSM Programs, results of DER programs, and/or increases in operating costs may lead to requests for regulatory relief, such as rate increases, which may be denied, in whole or part, by rate regulators. Rate increases may also result in reductions in customer usage of electricity or gas, legislative action and lawsuits.

SCE&G's electric operations in South Carolina and the Company's gas distribution operations in South Carolina and North Carolina are regulated by state utilities commissions. In addition, the construction of the New Units by SCE&G is subject to rate regulation by the SCPSC via the BLRA. Consolidated SCE&G's generating facilities are subject to extensive regulation and oversight from the NRC and SCPSC. SCE&G's electric transmission system is subject to extensive regulations and oversight from the SCPSC, NERC and FERC. Implementing and maintaining compliance with the NERC's mandatory reliability standards, enforced by FERC, for bulk electric systems could result in higher operating costs and capital expenditures. Non-compliance with these standards could subject SCE&G to substantial monetary penalties. Our gas marketing operations in Georgia are subject to state regulatory oversight and, for a portion of its operations, to rate regulation. There can be no assurance that Georgia's gas delivery regulatory framework will remain unchanged as market conditions evolve.

Furthermore, Dodd-Frank affects the use and reporting of derivative instruments. The regulations under this legislation provide for substantial additional regulation of over-the-counter and security-based derivative instruments, among other things, and require numerous rule-makings by the CFTC and the SEC to implement, many of which are still pending final action by those federal agencies. The Company and Consolidated SCE&G have determined that they meet the end-user exception to mandatory clearing of swaps under Dodd-Frank. In addition, the Company and Consolidated SCE&G have taken steps to ensure that they are not the party required to report these transactions in real-time (the "reporting party") by transacting solely with swap dealers and major swap participants, when possible, as well as entering into reporting party agreements with counterparties who also are not swap dealers or major swap participants, which establishes that those counterparties are obligated to report the transactions in accordance with applicable Dodd-Frank regulations. While these actions minimize the reporting obligations of the Company, they do not eliminate required recordkeeping for any Dodd-Frank regulated transactions. Despite qualifying for the end-user exception to mandatory clearing and ensuring that neither the Company nor Consolidated

SCE&G is the reporting party to a transaction required to be reported in real-time, we cannot predict when the final regulations will be issued or what requirements they will impose.

Although we believe that we have constructive relationships with the regulators, our ability to obtain rate treatment that will allow us to maintain reasonable rates of return is dependent upon regulatory determinations, and there can be no assurance that we will be able to implement rate adjustments when sought.

The Company and Consolidated SCE&G are subject to numerous environmental laws and regulations that require significant capital expenditures, can increase our costs of operations and may impact our business plans or expose us to environmental liabilities.

The Company and Consolidated SCE&G are subject to extensive federal, state and local environmental laws and regulations, including those relating to water quality and air emissions (such as reducing NO_X, SO_2, mercury and particulate matter). Some form of regulation is expected at the federal and state levels to impose regulatory requirements specifically directed at reducing GHG emissions from fossil fuel-fired electric generating units. On August 3, 2015, the EPA issued a revised standard for new power plants by re-proposing NSPS under the CAA for emissions of CO_2 from newly constructed fossil fuel-fired units. The final rule requires all new coal-fired power plants to meet a carbon emission rate of 1,400 pounds CO_2 per MWh. No new coal-fired plants could be constructed without partial carbon capture and sequestration capabilities. The Company and Consolidated SCE&G are monitoring the final rule, but do not plan to construct new coal-fired units in the foreseeable future. In addition, on August 3, 2015, the EPA issued its final rule on emission guidelines for states to follow in developing plans to address GHG emissions from existing units. The rule includes state-specific goals for reducing national CO_2 emissions by 32% from 2005 levels by 2030. However, on February 9, 2016, the Supreme Court stayed the rule pending disposition of a petition of review of the rule in the Court of Appeals. Also, a number of bills have been introduced in Congress that seek to require GHG emissions reductions from fossil fuel-fired electric generation facilities, natural gas facilities and other sectors of the economy, although none has yet been enacted. In April 2012, the EPA issued the finalized MATS for power plants that requires reduced emissions from new and existing coal and oil-fired electric utility steam generating facilities. The EPA's rule for cooling water intake structures to meet the best technology available became effective in October 2014, and the EPA also issued a final rule in December 2014 regarding the handling of coal ash and other combustion by-products produced by power plant operations. Furthermore, the EPA finalized new standards under the CWA governing effluent limitation guidelines for electric generating units in September 2015.

Compliance with these environmental laws and regulations requires us to commit significant resources toward environmental monitoring, installation of pollution control equipment, emissions fees and permitting at our facilities. These expenditures have been significant in the past and are expected to continue or even increase in the future. Changes in compliance requirements or more restrictive interpretations by governmental authorities of existing requirements may impose additional costs on us (such as the clean-up of MGP sites or additional emission allowances) or require us to incur additional expenditures or curtail some of our cost savings activities (such as the recycling of fly ash and other coal combustion products for beneficial use). Compliance with any GHG emission reduction requirements, including any mandated renewable portfolio standards, also may impose significant costs on us, and the resulting price increases to our customers may lower customer consumption. Such costs of compliance with environmental regulations could negatively impact our businesses and our results of operations and financial position, especially if emissions or discharge limits are reduced or more onerous permitting requirements or additional regulatory requirements are imposed.

Renewable and/or alternative electric generation portfolio standards may be enacted at the federal or state level. In June 2014 the State of South Carolina enacted legislation known as Act 236 with the stated goal for each investor-owned utility to supply up to 2% of its 5-year average retail peak demand with renewable electric generation resources by the end of 2020. A utility, at its option, may supply an additional 1% during this period. Such renewable energy may not be readily available in our service territories and could be costly to build, finance, acquire, integrate, and/or operate. Resulting increases in the price of electricity to recover the cost of these types of generation, as approved by regulatory commissions, could result in lower usage of electricity by our customers. In addition, DER generation at customers' facilities could result in the loss of sales to those customers. Compliance with potential future portfolio standards could significantly impact our capital expenditures and our results of operations and financial condition. Utility scale solar development companies are currently working in South Carolina to develop projects in SCE&G's service territory. The integration of those resources at high penetration levels may be challenging.

The compliance costs of these environmental laws and regulations are important considerations in the Company's and Consolidated SCE&G's strategic planning and, as a result, significantly affect the decisions to construct, operate, and retire facilities, including generating facilities. In effecting compliance with MATS, SCE&G has retired three of its oldest and smallest coal-fired units and converted three others such that they may be gas-fired.

The Company and Consolidated SCE&G are vulnerable to interest rate increases, which would increase our borrowing costs, and we may not have access to capital at favorable rates, if at all. Additionally, potential disruptions in the capital and credit markets may further adversely affect the availability and cost of short-term funds for liquidity requirements and our ability to meet long-term commitments; each could in turn adversely affect our results of operations, cash flows and financial condition.

The Company and Consolidated SCE&G rely on the capital markets, particularly for publicly offered debt and equity, as well as the banking and commercial paper markets, to meet our financial commitments and short-term liquidity needs if internal funds are not available from operations. Changes in interest rates affect the cost of borrowing. The Company's and Consolidated SCE&G's business plans, which include significant investments in energy generation and other internal infrastructure projects, reflect the expectation that we will have access to the capital markets on satisfactory terms to fund commitments. Moreover, the ability to maintain short-term liquidity by utilizing commercial paper programs is dependent upon maintaining satisfactory short-term debt ratings and the existence of a market for our commercial paper generally.

The Company's and Consolidated SCE&G's ability to draw on our respective bank revolving credit facilities is dependent on the ability of the banks that are parties to the facilities to meet their funding commitments and on our ability to timely renew such facilities. Those banks may not be able to meet their funding commitments to the Company or Consolidated SCE&G if they experience shortages of capital and liquidity or if they experience excessive volumes of borrowing requests from us and other borrowers within a short period of time. Longer-term disruptions in the capital and credit markets as a result of uncertainty, changing or increased regulation, reduced alternatives or failures of significant financial institutions could adversely affect our access to liquidity needed for our businesses. Any disruption could require the Company and Consolidated SCE&G to take measures to conserve cash until the markets stabilize or until alternative credit arrangements or other funding for our business needs can be arranged. Such measures could include deferring capital expenditures or other discretionary uses of cash. Disruptions in capital and credit markets also could result in higher interest rates on debt securities, limited or no access to the commercial paper market, increased costs associated with commercial paper borrowing or limitations on the maturities of commercial paper that can be sold (if at all), increased costs under bank credit facilities and reduced availability thereof, and increased costs for certain variable interest rate debt securities of the Company and Consolidated SCE&G.

Disruptions in the capital markets and its actual or perceived effects on particular businesses and the greater economy also adversely affect the value of the investments held within SCANA's pension trust. A significant long-term decline in the value of these investments may require us to make or increase contributions to the trust to meet future funding requirements. In addition, a significant decline in the market value of the investments may adversely impact the Company's and Consolidated SCE&G's results of operations, cash flows and financial condition, including its shareholders' equity.

A downgrade in the credit rating of SCANA or any of SCANA's subsidiaries, including SCE&G, could negatively affect our ability to access capital and to operate our businesses, thereby adversely affecting results of operations, cash flows and financial condition.

Various rating agencies currently rate SCANA's long-term senior unsecured debt, SCE&G's long-term senior secured debt, and the long-term senior unsecured debt of PSNC Energy as investment grade. In addition, rating agencies maintain ratings on the short-term debt of SCANA, SCE&G, Fuel Company (which ratings are based upon the guarantee of SCE&G) and PSNC Energy. Rating agencies consider qualitative and quantitative factors when assessing SCANA and its rated operating companies' credit ratings, including regulatory environment, capital structure and the ability to meet liquidity requirements. Changes in the regulatory environment or deterioration of our rated companies' commonly monitored financial credit metrics and adverse developments with respect to nuclear construction could negatively affect their debt ratings. If these rating agencies were to downgrade any of these ratings, particularly to below investment grade for long-term ratings, borrowing costs on new issuances would increase, which could adversely impact financial results, and the potential pool of investors and funding sources could decrease.

The Company and Consolidated SCE&G are engaged in activities for which they have claimed, and expect to claim in the future, research and experimentation tax deductions and credits which are the subject of uncertainty and which may be considered controversial by the taxing authorities. The outcome of those uncertainties could adversely impact cash flows and financial condition.

The Company and Consolidated SCE&G have claimed significant research and experimentation tax deductions and credits related to the ongoing design and construction activities of the New Units. These claims followed the issuance of final IRS regulations in 2014 regarding such treatment with respect to expenditures related to the design and construction of pilot models. (See also Uncertain income tax positions within the Critical Accounting Policies and Estimates section of Item 7.

Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 5 to the consolidated financial statements.)

These tax claims primarily involve the timing of recognition of tax deductions rather than permanent tax attributes. The permanent attributes (net), as well as most of the interest accruals required to be recorded with respect to them, have been deferred within regulatory assets. As such, these claims have not had, and are not expected to have in the future, significant direct effects on the Company’s and Consolidated SCE&G’s results of operations. Nonetheless, the claims have contributed significantly to the Company’s and Consolidated SCE&G’s cash flows and are expected to continue to do so through the remainder of the New Units’ construction period. Also, the claims have provided a significant source of capital and have lessened the level of debt and equity financing that the Company and Consolidated SCE&G have needed to raise in the financial markets. Future claims are expected to provide similar tax benefits.

However, the claims made to date are under examination, and may be considered controversial, by the IRS. It is expected that the IRS will also examine future claims. To the extent that the claims are not sustained on examination or through any subsequent appeal, the Company and Consolidated SCE&G will be required to repay any cash received for tax benefit claims which are ultimately disallowed, along with interest on those amounts. Such amounts could be significant and could adversely affect the Company's and Consolidated SCE&G's cash flows and financial condition. In certain circumstances, which management considers to be remote, penalties for underpayment of income taxes could also be assessed. Additionally, in such circumstances, the Company and Consolidated SCE&G may need to access the capital markets to fund those tax and interest payments, which could in turn adversely impact their ability to access financial markets for other purposes.

Operating results may be adversely affected by natural disasters, man-made mishaps and abnormal weather.

The Company has delivered less gas and, in deregulated markets, received lower prices for natural gas when weather conditions have been milder than normal, and as a consequence earned less income from those operations. Mild weather in the future could adversely impact the revenues and results of operations and harm the financial condition of the Company and Consolidated SCE&G. Hot or cold weather could result in higher bills for customers and result in higher write-offs of receivables and in a greater number of disconnections for non-payment. In addition, for the Company and Consolidated SCE&G, severe weather can be destructive, causing outages and property damage, adversely affecting operating expenses and revenues.

Natural disasters (such as hurricanes or other significant weather events, electromagnetic events or the 2011 earthquake and tsunami in Japan) or man-made mishaps (such as the San Bruno, California natural gas transmission pipeline failure, electric utility companies' ash pond failures, and cyber-security failures experienced by many businesses) could have direct significant impacts on the Company and Consolidated SCE&G and on our key contractors and suppliers or could impact us through changes to federal, state or local policies, laws and regulations, and have a significant impact on our financial condition, operating expenses, and cash flows.

Potential competitive changes may adversely affect our gas and electricity businesses due to the loss of customers, reductions in revenues, or write-down of stranded assets.

The utility industry has been undergoing structural change for a number of years, resulting in increasing competitive pressures on electric and natural gas utility companies. Competition in wholesale power sales via an RTO/ISO is in effect across much of the country, but the Southeastern utilities have retained the traditional bundled, vertically integrated structure. Should an RTO/ISO-market be implemented in the Southeast, potential risks emerge from reliance on volatile wholesale market prices as well as increased costs associated with new delivery transmission and distribution infrastructure.

Some states have also mandated or encouraged unbundled retail competition. Should this occur in South Carolina or North Carolina, increased competition may create greater risks to the stability of utility earnings generally and may in the future reduce earnings from retail electric and natural gas sales. In a deregulated environment, formerly regulated utility companies that are not responsive to a competitive energy marketplace may suffer erosion in market share, revenues and profits as competitors gain access to their customers. In addition, the Company’s and Consolidated SCE&G’s generation assets would be exposed to considerable financial risk in a deregulated electric market. If market prices for electric generation do not produce adequate revenue streams and the enabling legislation or regulatory actions do not provide for recovery of the resulting stranded costs, a write-down in the value of the related assets could be required.

The Company and Consolidated SCE&G are subject to the risk of loss of sales due to the growth of distributed generation especially in the form of renewable power such as solar photovoltaic systems, which systems have undergone a rapid decline in their costs. As a result of federal and state subsidies, potential regulations allowing third-party retail sales, and advances in distributed generation technology, the growth of such distributed generation could be significant in the future. Such growth will lessen Company and Consolidated SCE&G sales and will slow growth, potentially causing higher rates to customers.

The Company and SCE&G are subject to risks associated with changes in business and economic climate which could adversely affect revenues, results of operations, cash flows and financial condition and could limit access to capital.

Sales, sales growth and customer usage patterns are dependent upon the economic climate in the service territories of the Company and SCE&G, which may be affected by regional, national or even international economic factors. Adverse events, economic or otherwise, may also affect the operations of suppliers and key customers. Such events may result in the loss of suppliers or customers, in higher costs charged by suppliers, in changes to customer usage patterns and in the failure of customers to make timely payments to us. With respect to the Company, such events also could adversely impact the results of operations through the recording of a goodwill or other asset impairment. The success of local and state governments in attracting new industry to our service territories is important to our sales and growth in sales, as are stable levels of taxation (including property, income or other taxes) which may be affected by local, state, or federal budget deficits, adverse economic climates generally, legislative actions (including tax reform), or regulatory actions. Budget cutbacks also adversely affect funding levels of federal and state support agencies and non-profit organizations that assist low income customers with bill payments.

In addition, conservation and demand side management efforts and/or technological advances may cause or enable customers to significantly reduce their usage of the Company's and SCE&G's products and adversely affect sales, sales growth, and customer usage patterns. For instance, improvements in energy storage technology, if realized, could have dramatic impacts on the viability of and growth in distributed generation.

Factors that generally could affect our ability to access capital include economic conditions and our capital structure. Much of our business is capital intensive, and achievement of our capital plan and long-term growth targets is dependent, at least in part, upon our ability to access capital at rates and on terms that are attractive. If our ability to access capital becomes significantly constrained, our interest costs will likely increase and our financial condition and future results of operations could be adversely impacted.

Problems with operations could cause us to curtail or limit our ability to serve customers or cause us to incur substantial costs, thereby adversely impacting revenues, results of operations, cash flows and financial condition.

Critical processes or systems in the Company's or Consolidated SCE&G's operations could become impaired or fail from a variety of causes, such as equipment breakdown, transmission equipment failure, information systems failure or security breach, operator error, natural disasters, and the effects of a pandemic, terrorist attack or cyber attack on our workforce or facilities or on vendors and suppliers necessary to maintain services key to our operations.

In particular, as the operator of power generation facilities, many of which entered service prior to 1985 and may be difficult to maintain, Consolidated SCE&G could incur problems, such as the breakdown or failure of power generation or emission control equipment, transmission equipment, or other equipment or processes which would result in performance below assumed levels of output or efficiency. The operation of the New Units or the integration of a significant amount of distributed generation into our systems may entail additional cycling of our coal-fired generation facilities and may thereby increase the number of unplanned outages at those facilities. In addition, any such breakdown or failure may result in Consolidated SCE&G purchasing emission allowances or replacement power at market rates, if such allowances and replacement power are available at all. These purchases are subject to state regulatory prudency reviews for recovery through rates. If replacement power is not available, such problems could result in interruptions of service (blackout or brownout conditions) in all or part of SCE&G's territory or elsewhere in the region. Similarly, a natural gas line failure of the Company or Consolidated SCE&G could affect the safety of the public, destroy property, and interrupt our ability to serve customers.

Events such as these could entail substantial repair costs, litigation, fines and penalties, and damage to reputation, each of which could have an adverse effect on the Company's and Consolidated SCE&G's revenues, results of operations, cash flows, and financial condition. Insurance may not be available or adequate to mitigate the adverse impacts of these events.

A failure of the Company and Consolidated SCE&G to maintain the physical and cyber security of its operations may result in the failure of operations, damage to equipment, or loss of information, and could result in a significant adverse impact to the Company's and Consolidated SCE&G's financial condition, results of operations and cash flows.

The Company and Consolidated SCE&G depend on maintaining the physical and cyber security of their operations and assets. As much of our business is part of the nation's critical infrastructure, the loss or impairment of the assets associated with that portion of our businesses could have serious adverse impacts on the customers and communities that we serve. Virtually all of the Company's and Consolidated SCE&G's operations are dependent in some manner upon our cyber systems, which encompass electric and gas operations, nuclear and fossil fuel generating plants, human resource and customer systems and databases, information system networks, and systems containing confidential corporate information. Cyber systems, such as those of the Company and Consolidated SCE&G, are often targets of malicious cyber attacks. A successful physical or cyber attack could lead to outages, failure of operations of all or portions of our businesses, damage to key components and equipment, and exposure of confidential customer, vendor, shareholder, employee, or corporate information. The Company and Consolidated SCE&G may not be readily able to recover from such events. In addition, the failure to secure our operations from such physical and cyber events may cause us reputational damage. Litigation, penalties and claims from a number of parties, including customers, regulators and shareholders, may ensue. Insurance may not be adequate to mitigate the adverse impacts of these events. As a result, the Company's and Consolidated SCE&G's financial condition, results of operations, and cash flows may be adversely affected.

SCANA's ability to pay dividends and to make payments on SCANA's debt securities may be limited by covenants in certain financial instruments and by the financial results and condition of its subsidiaries, thereby adversely impacting the valuation of our common stock and our access to capital.

We are a holding company that conducts substantially all of our operations through our subsidiaries. Our assets consist primarily of investments in subsidiaries. Therefore, our ability to meet our obligations for payment of interest and principal on outstanding debt and to pay dividends to shareholders and corporate expenses depends on the earnings, cash flows, financial condition and capital requirements of our subsidiaries, and the ability of our subsidiaries, principally Consolidated SCE&G, PSNC Energy and SCANA Energy, to pay dividends or to repay funds to us. Our ability to pay dividends on our common stock may also be limited by existing or future covenants limiting the right of our subsidiaries to pay dividends on their common stock. Any significant reduction in our payment of dividends in the future may result in a decline in the value of our common stock. Such a decline in value could limit our ability to raise debt and equity capital.

A significant portion of Consolidated SCE&G's generating capacity is derived from nuclear power, the use of which exposes us to regulatory, environmental and business risks. These risks could increase our costs or otherwise constrain our business, thereby adversely impacting our results of operations, cash flows and financial condition. These risks will increase as the New Units are developed.

In 2016, Unit 1 provided approximately 5.8 million MWh, or 25% of our generation. When the New Units are completed, our generating capacity and the percentage of total generating capacity represented by nuclear sources are expected to increase. Hence, SCE&G is subject to various risks of nuclear generation, which include the following:

- The potential harmful effects on the environment and human health resulting from a release of radioactive materials in connection with the operation of nuclear facilities and the storage, handling and disposal of radioactive materials;
- Limitations on the amounts and types of insurance commercially available to cover losses that might arise in connection with our nuclear operations or those of others in the United States;
- The possibility that new laws and regulations could be enacted that could adversely affect the liability structure that currently exists in the United States;
- Uncertainties with respect to procurement of nuclear fuel and suppliers thereof, fabrication of nuclear fuel and related vendors, and the storage of spent nuclear fuel;
- Uncertainties with respect to contingencies if insurance coverage is inadequate; and
- Uncertainties with respect to the technological and financial aspects of decommissioning nuclear plants at the end of their operating lives.

The NRC has broad authority under federal law to impose licensing and safety-related requirements for the operation of nuclear generation facilities. In the event of non-compliance, the NRC has the authority to impose fines or shut down a unit, or both, depending upon its assessment of the severity of the situation, until compliance is achieved. Revised safety requirements promulgated by the NRC could necessitate capital expenditures at nuclear plants such as ours. In today's environment, there is a heightened risk of terrorist attack on the nation's nuclear facilities, which has resulted in increased security costs at our nuclear plant. Although we have no reason to anticipate a serious nuclear incident, a major incident at a nuclear facility anywhere in the world could cause the NRC to limit or prohibit the operation or licensing of any domestic nuclear unit, resulting in costly changes to units under construction or in operation and adversely impacting our results of operations, cash flows and financial condition. Furthermore, a major incident at a domestic nuclear facility could result in retrospective premium assessments under our nuclear insurance coverages.

Failure to retain and attract key personnel could adversely affect the Company's and Consolidated SCE&G's operations and financial performance.

As with many other utilities, a significant portion of our workforce will be eligible for retirement during the next few years. We must attract, retain and develop executive officers and other professional, technical and craft employees with the skills and experience necessary to successfully manage, operate and grow our businesses. Competition for these employees is high, and in some cases we must compete for these employees on a regional or national basis. We may be unable to attract and retain these personnel. In particular, the timely hiring, training, licensing and retention of personnel needed for the operation of the New Units is necessary to maintain the schedule for their operation. Further, the Company's or Consolidated SCE&G's ability to construct or maintain generation or other assets including the New Units requires the availability of suitable skilled contractor personnel. We may be unable to obtain appropriate contractor personnel at the times and places needed. Labor disputes with employees or contractors covered by collective bargaining agreements also could adversely affect implementation of our strategic plan and our operational and financial performance. Furthermore, increased medical benefit costs of employees and retirees could adversely affect the results of operations of the Company and Consolidated SCE&G. Medical costs in this country have risen significantly over the past number of years and are expected to continue to increase at unpredictable rates. Such increases, unless satisfactorily managed by the Company and Consolidated SCE&G, could adversely affect results of operations.

The Company and Consolidated SCE&G are subject to the risk that strategic decisions made by us either do not result in a return of or on invested capital or might negatively impact our competitive position, which can adversely impact our results of operations, cash flows, financial condition, and access to capital.

From time to time, the Company and Consolidated SCE&G make strategic decisions that may impact our direction with regard to business opportunities, the services and technologies offered to customers or that are used to serve customers, and the generating plants and other infrastructure that form the basis of much of our business. These strategic decisions may not result in a return of or on our invested capital, and the effects of these strategic decisions may have long-term implications that are not likely to be known to us in the short-term. Changing political climates and public attitudes, including customers' concerns regarding rate increases, such as those periodic rate increases under the BLRA, may adversely affect the ongoing acceptability of strategic decisions that have been made (and, in some cases, previously supported by legislation or approved by regulators), to the detriment of the Company or Consolidated SCE&G (e.g., revision or repeal of the BLRA). Over time, these strategic decisions or changing attitudes toward such decisions, which could be adverse to the Company's or Consolidated SCE&G's interests, may have a negative effect on our results of operations, cash flows and financial condition, as well as limit our ability to access capital.

The Company and Consolidated SCE&G are subject to the reputational risks that may result from a failure to adhere to high standards related to compliance with laws and regulations, ethical conduct, operational effectiveness, customer service and the safety of employees, customers and the public. These risks could adversely affect the valuation of our common stock and the Company's and Consolidated SCE&G's access to capital.

The Company and Consolidated SCE&G are committed to comply with all laws and regulations, to assure reliability of provided services, to focus on the safety of employees, customers and the public, to ensure environmental compliance, to maintain the privacy of information related to our customers and employees, and to maintain effective communications with the public and key stakeholder groups, particularly during emergencies and times of crisis. Traditional news media and social media can very rapidly convey information, whether factual or not, to large numbers of people, including customers, investors, regulators, legislators and other stakeholders, and the failure to effectively manage timely, accurate communication through these channels could adversely impact our reputation. The Company and Consolidated SCE&G also are committed to operational excellence, to quality customer service, and, through our Code of Conduct and Ethics, to maintain high standards of ethical conduct in our business operations. A failure to meet these commitments may subject the Company and Consolidated SCE&G not only to fraud, regulatory action, litigation and financial loss, but also to reputational risk that could adversely affect the valuation of SCANA's stock, adversely affect the Company's and Consolidated SCE&G's access to capital, and result in further regulatory oversight. Insurance may not be available or adequate to respond to these events.

ITEM 1B. UNRESOLVED STAFF COMMENTS

Not Applicable

ITEM 2. PROPERTIES

SCANA owns no significant property other than the capital stock of each of its subsidiaries. It holds, directly or indirectly, all of the capital stock of each of its subsidiaries.

SCE&G's bond indenture, which secures its First Mortgage Bonds, constitutes a direct mortgage lien on substantially all of its electric utility property. GENCO's Williams Station is also subject to a first mortgage lien which secures certain outstanding debt of GENCO.

Electric Properties

The following table shows the electric generating facilities and their net generating capacity as of December 31, 2016.

	In-Service Date	Net Generating Capacity Summer (MW)
Coal-Fired Steam:		
Wateree - Eastover, SC	1970	684
Williams - Goose Creek, SC	1973	605
Cope - Cope, SC	1996	415
Kapstone - Charleston, SC	1999	85
Gas-Fired Steam:		
McMeekin - Irmo, SC	1958	250
Urquhart Unit 3 - Beech Island, SC	1953	95
Nuclear:		
Summer Station Unit 1 - Parr, SC (reflects SCE&G's 66.7% ownership share)	1984	647
Summer Station Unit 2 and Unit 3 - Parr, SC		*
Internal Combustion Turbines:		
Jasper Combined Cycle - Jasper, SC	2004	852
Urquhart Combined Cycle - Beech Island, SC	2002	458
Peaking units - various locations in SC	1968-2010	348
Hydro:		
Fairfield Pumped Storage - Parr, SC	1978	576
Saluda - Irmo, SC	1930	200
Other - various locations in or bordering SC	1905-1914	18

* SCE&G presently owns 55% of Unit 2 and Unit 3, which are being constructed at Summer Station.

SCE&G owns 433 substations having an aggregate transformer capacity of 31.5 million KVA. The transmission system consists of 3,442 miles of lines, and the distribution system consists of 18,522 pole miles of overhead lines and 7,441 trench miles of underground lines.

Natural Gas Distribution and Transmission Properties

SCE&G's natural gas system includes 447 miles of transmission pipeline of up to 20 inches in diameter that connect its distribution system with Southern Natural, Transco and DCGT. SCE&G’s distribution system consists of 17,375 miles of distribution mains and related service facilities. SCE&G also owns two LNG plants, one located near Charleston, South Carolina, and the other in Salley, South Carolina. The Charleston facility can liquefy up to 6,180 MMBTU per day and store the liquefied equivalent of 1,009,400 MMBTU of natural gas. The Salley facility can store the liquefied equivalent of 927,000 MMBTU of natural gas and has no liquefying capabilities. The LNG facilities have the capacity to regasify approximately 61,800 MMBTU per day at Charleston and 92,700 MMBTU per day at Salley.

PSNC Energy’s natural gas system consists of 606 miles of transmission pipeline of up to 24 inches in diameter that connect its distribution systems with Transco. PSNC Energy’s distribution system consists of 21,686 miles of distribution mains and related service facilities. PSNC Energy owns one LNG plant with storage capacity of 1,000,000 MMBTU, the capacity to liquefy up to 4,000 MMBTU per day and the capacity to regasify approximately 100,000 MMBTU per day.

ITEM 3. LEGAL PROCEEDINGS

SCANA and SCE&G are subject to various claims and litigation incidental to their business operations which management anticipates will be resolved without a material impact on their respective results of operations, cash flows or financial condition. In addition, certain material regulatory and environmental matters and uncertainties, some of which remain outstanding at December 31, 2016, are described in the Rate Matters section of Note 2 and in the Environmental section of Note 10 to the consolidated financial statements.

ITEM 4. MINE SAFETY DISCLOSURES

Not Applicable

EXECUTIVE OFFICERS OF SCANA CORPORATION

Executive officers are elected at the annual meeting of the Board of Directors, held immediately after the annual meeting of shareholders, and hold office until the next such annual meeting, unless (1) a resignation is submitted, (2) the Board of Directors shall otherwise determine or (3) as provided in the By-laws of SCANA. Positions held are for SCANA and all wholly-owned subsidiaries unless otherwise indicated.

Name	Age	Positions Held During Past Five Years	Dates
Kevin B. Marsh	61	Chairman of the Board and Chief Executive Officer	*-present
		President and Chief Operating Officer-SCANA	*-present
Jimmy E. Addison	56	Executive Vice President-SCANA	*-present
		Chief Financial Officer	*-present
		President and Chief Operating Officer-SCANA Energy	2014-present
Jeffrey B. Archie	59	Senior Vice President and Chief Nuclear Officer-SCE&G	*-present
		Senior Vice President-SCANA	*-present
Sarena D. Burch	59	Senior Vice President-Risk Management and Corporate Compliance Senior Vice President-Fuel Procurement and Asset Management-SCANA, SCE&G and PSNC Energy	2016-present *-2015
Stephen A. Byrne	57	President-Generation and Transmission and Chief Operating Officer-SCE&G	*-present
		Executive Vice President-SCANA	*-present
D. Russell Harris	52	President-Gas Operations-SCE&G	2013-present
		President and Chief Operating Officer-PSNC Energy	*-present
		Senior Vice President-Gas Distribution-SCANA	2013-present
		Senior Vice President-SCANA	2012-2013
Kenneth R. Jackson	60	Senior Vice President-Economic Development, Governmental and Regulatory Affairs	2014-present
		Vice President-Rates and Regulatory Services	*-2014
W. Keller Kissam	50	President-Retail Operations-SCE&G	*-present
		Senior Vice President-SCANA	*-present
Ronald T. Lindsay	66	Senior Vice President, General Counsel and Assistant Secretary	*-present
Randal M. Senn	60	Senior Vice President-Administration-SCANA	2016-present
		Vice President and Chief Information Officer	2016
		Chief Information Officer	*-2016

*Indicates positions held at least since February 24, 2012.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES

SCANA:

Price Range (NYSE Composite Listing):

	2016				2015			
	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.	4th Qtr.	3rd Qtr.	2nd Qtr.	1st Qtr.
High	$ 74.94	$ 76.41	$ 75.67	$ 70.35	$ 61.95	$ 57.73	$ 56.26	$ 65.57
Low	$ 67.31	$ 69.04	$ 66.02	$ 59.46	$ 54.84	$ 50.17	$ 47.77	$ 52.03

SCANA common stock trades on the NYSE using the ticker symbol SCG. At February 20, 2017 there were 142,916,917 shares of SCANA common stock outstanding which were held by approximately 25,000 shareholders of record. For a summary of equity securities issuable under SCANA's compensation plans at December 31, 2016, see Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

SCANA declared quarterly dividends on its common stock of $0.575 per share in 2016 and $0.545 per share in 2015. On February 16, 2017, SCANA increased the quarterly cash dividend rate on SCANA common stock to $0.6125 per share, an increase of approximately 6.5%. The next quarterly dividend is payable April 1, 2017 to shareholders of record on March 10, 2017. For a discussion of provisions that could limit the payment of cash dividends, see Financing Limits and Related Matters in the Liquidity and Capital Resources section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 3 to the consolidated financial statements.

The following table provides information about purchases by or on behalf of SCANA or any affiliated purchaser (as defined in Rule 10b-18(a)(3) under the Securities Exchange Act of 1934, as amended (Exchange Act)) of shares or other units of any class of SCANA's equity securities that are registered pursuant to Section 12 of the Exchange Act:

Issuer Purchases of Equity Securities

	(a)	(b)	(c)	(d)
Period	Total number of shares (or units) purchased	Average price paid per share (or unit)	Total number of shares (or units) purchased as part of publicly announced plans or programs	Maximum number (or approximate dollar value) of shares (or units) that may yet be purchased under the plans or programs
October 1-31, 2016	7,583	$ 69.29	7,583	
November 1-30, 2016	—	—	—	
December 1-31, 2016	—	—	—	
Total	7,583		7,583	*

*The above table represents shares acquired for non-employee directors under the Director Compensation and Deferral Plan. On December 16, 2014, SCANA announced a program to convert from original issue to open market purchase of SCANA common stock for all applicable compensation and dividend reinvestment plans. This program took effect in the first quarter of 2015 and has no stated maximum number of shares that may be purchased and no stated expiration date.

SCE&G:

All of SCE&G's common stock is owned by SCANA, and no established public trading market exists for SCE&G common stock. During 2016 and 2015, SCE&G declared quarterly dividends on its common stock in the following amounts:

Declaration Date	Amount	Declaration Date	Amount
February 18, 2016	$ 72.2 million	February 20, 2015	$ 69.0 million
April 28, 2016	73.3 million	April 30, 2015	67.8 million
July 28, 2016	74.0 million	July 30, 2015	68.4 million
October 27, 2016	77.5 million	October 29, 2015	72.3 million

On February 16, 2017, SCE&G declared a quarterly dividend on its common stock of $76.9 million.

For a discussion of provisions that could limit the payment of cash dividends, see Financing Limits and Related Matters in the Liquidity and Capital Resources section of Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 3 to the consolidated financial statements.

ITEM 6. SELECTED FINANCIAL DATA

As of or for the Year Ended December 31,	2016	2015	2014	2013	2012
	(Millions of dollars, except statistics and per share amounts)				
SCANA:					
Statement of Income Data					
Operating Revenues	$ 4,227	$ 4,380	$ 4,951	$ 4,495	$ 4,176
Operating Income	$ 1,153	$ 1,308	$ 1,007	$ 910	$ 859
Net Income	$ 595	$ 746	$ 538	$ 471	$ 420
Common Stock Data					
Weighted Avg Common Shares Outstanding (Millions)	142.9	142.9	141.9	138.7	131.1
Basic Earnings Per Share	$ 4.16	$ 5.22	$ 3.79	$ 3.40	$ 3.20
Diluted Earnings Per Share	$ 4.16	$ 5.22	$ 3.79	$ 3.39	$ 3.15
Dividends Declared Per Share of Common Stock	$ 2.30	$ 2.18	$ 2.10	$ 2.03	$ 1.98

Transportation customers (Year-End)	632	627	656	667	663
Transportation volumes (Thousand Therms)	674,999	791,402	1,786,897	1,729,399	1,559,542

For information on the impact of certain dispositions on SCANA's selected financial data, see Note 1 to the consolidated financial statements.

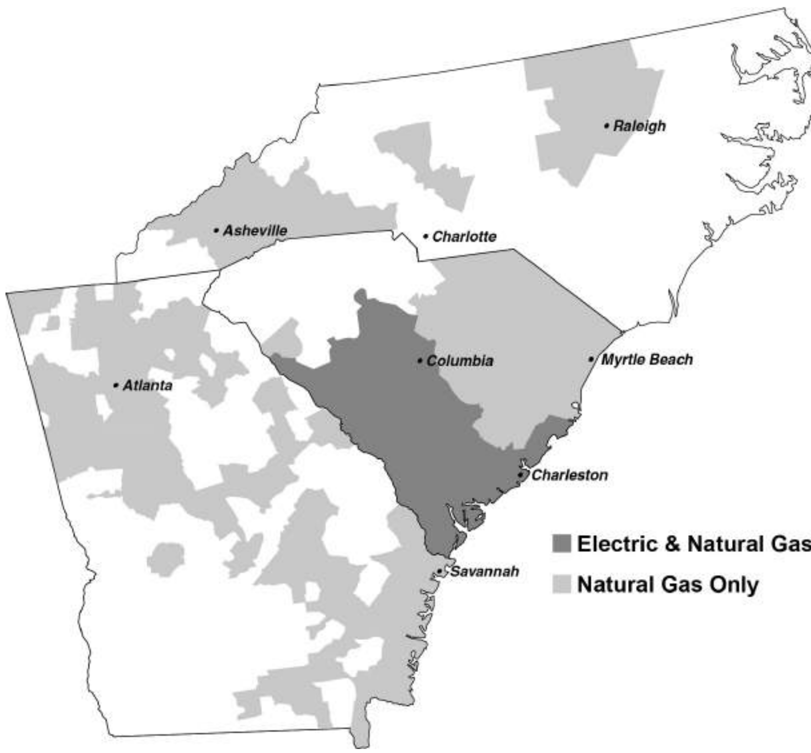
ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Pursuant to General Instruction I of Form 10-K, SCE&G is permitted to omit certain information related to itself and its consolidated affiliates called for by Item 7 of Form 10-K, and instead provide a management's narrative explanation of its consolidated results of operation and other information described therein. Such information is presented hereunder specifically for Consolidated SCE&G, but may be presented alongside information presented for the Company generally. Consolidated SCE&G makes no representation as to information relating solely to SCANA Corporation and its subsidiaries (other than Consolidated SCE&G).

OVERVIEW

SCANA, through its wholly-owned regulated subsidiaries, is primarily engaged in the generation, transmission, distribution and sale of electricity in South Carolina and in the purchase, transmission and sale of natural gas in North Carolina and South Carolina. Through a wholly-owned nonregulated subsidiary, SCANA markets natural gas to retail customers in Georgia and to wholesale customers in the southeast. A service company subsidiary of SCANA provides primarily administrative and management services to SCANA and its subsidiaries.

The following map indicates areas where the Company's significant business segments conduct their activities, as further described in this overview section.



The following percentages reflect amounts attributable to the Company's regulated and nonregulated operations and other nonregulated (including the holding company and the services company).

	2016	2015	2014
Net Income			
Regulated	98 %	72%	98 %
Nonregulated operations	5 %	4%	7 %
Other nonregulated	(3)%	24%	(5)%
Assets			
Regulated	97 %	97%	95 %
Nonregulated operations	1 %	1%	2 %
Other nonregulated	2 %	2%	3 %

In the first quarter of 2015, SCANA closed on the sales of its interstate natural gas pipeline and telecommunications subsidiaries. Gains from these sales are included within Other. See Dispositions in Note 1 to the consolidated financial statements.

Key Earnings Drivers and Outlook

In 2016, companies announced plans to invest over $1.8 billion, with the expectation of creating approximately 7,000 jobs in the Company's South Carolina and North Carolina service territories. At December 31, 2016, South Carolina's unemployment rate was 4.3%, which is approximately 1.2% lower than the prior year. In addition, each of the Company's regulated businesses experienced positive customer growth year over year.

Over the next five years, key earnings drivers for the Company are expected to be additions to rate base at its regulated subsidiaries, consisting primarily of capital expenditures for new generating capacity, environmental facilities and system expansion. Other factors that will impact future earnings growth include the regulatory environment, customer growth and usage in each of the regulated utility businesses, earnings in the natural gas marketing business and the level of growth of operation and maintenance, interest and other expenses and taxes.

Electric Operations

SCE&G's electric operations primarily generate electricity and provide for its transmission, distribution and sale to approximately 709,000 customers (as of December 31, 2016) in portions of South Carolina in an area covering nearly 17,000 square miles. GENCO owns a coal-fired generating station and sells electricity solely to SCE&G. Fuel Company acquires, owns, provides financing for and sells at cost to SCE&G nuclear fuel, certain fossil fuels and emission and other environmental allowances.

Operating results are primarily driven by customer demand for electricity, rates allowed to be charged to customers and the ability to control costs. Demand for electricity is primarily affected by weather, customer growth and the economy. SCE&G is able to recover the cost of fuel used in electric generation through retail customers' bills, but increases in fuel costs affect electricity prices and, therefore, the competitive position of electricity compared to other energy sources.

Embedded in the rates charged to customers is an allowed regulatory ROE. SCE&G's allowed ROE in 2016 was 10.25% for non-BLRA rate base and 10.5% for BLRA-related rate base. For BLRA-related rate base existing prior to 2016, SCE&G's allowed ROE was 11.0%.

New Nuclear Construction

SCE&G, on behalf of itself and as agent for Santee Cooper, has contracted with the Consortium for the design and construction of two 1,250 MW (1,117 MW, net) nuclear generation units, which SCE&G will jointly own with Santee Cooper. SCE&G's current ownership share in the New Units is 55%, and SCE&G has agreed to acquire an additional 5% ownership from Santee Cooper in increments beginning with the commercial operation date of Unit 2.

On October 27, 2015, SCE&G, Santee Cooper and the Consortium reached a settlement regarding certain disputes, and the EPC Contract was amended. The October 2015 Amendment became effective on December 31, 2015, and among other things, it resolved by settlement and release substantially all then-outstanding disputes between SCE&G and the Consortium. The October 2015 Amendment also provided SCE&G and Santee Cooper an option, subject to regulatory approvals, to fix the total amount to be paid to the Consortium for its entire scope of work on the project after June 30, 2015, subject to certain exceptions. In May 2016, SCE&G petitioned the SCPSC for approval of updated construction and capital cost schedules for the New Units developed as a result of the October 2015 Amendment. On November 9, 2016, the SCPSC approved a settlement agreement among SCE&G, ORS and certain other parties concerning this petition. The SCPSC also approved SCE&G's election of the fixed price option.

The approved construction schedule designates contractual guaranteed substantial completion dates of August 31, 2019 and August 31, 2020 for Units 2 and 3, respectively, although recent communications from WEC indicate substantial completion dates of April 2020 and December 2020 for Units 2 and 3, respectively. These later dates remain within SCPSC-approved 18-month contingency periods provided for under the BLRA, and achievement of such dates would also allow the output of both units to qualify, under current law, for federal production tax credits. However, there is substantial uncertainty as to WEC's ability to meet these dates given its historical inability to meet forecasted productivity and work force efficiency levels.

The approved capital cost schedule includes incremental capital costs. SCE&G's total project capital cost is now estimated at approximately $6.8 billion including owner's costs and transmission, or $7.7 billion with escalation and AFC. In addition, the SCPSC approved revising SCE&G's allowed ROE for new nuclear construction from 10.5% to 10.25%. This revised ROE will be applied prospectively for the purpose of calculating revised rates sought by SCE&G under the BLRA on and after January 1, 2017. In addition, SCE&G may not file future requests to amend capital cost schedules prior to January 28, 2019, unless its annual revised rate request is denied because SCE&G is out of compliance with its approved capital cost schedule or BLRA construction milestone schedule. In most circumstances, if the projected commercial operation date for Unit 2 is extended, the expiration of the January 28, 2019 moratorium will be extended by an equal amount of time.

SCE&G and Santee Cooper, the co-owner of the New Units, continue to evaluate various actions which might be taken in the event that Toshiba and WEC are unable or unwilling to complete the project. These include completing the work under any of several arrangements with other contractors or, were it determined to be prudent, halting the project, leaving SCE&G to pursue cost recovery under the abandonment provisions of the BLRA. Any significant delay in the timing of construction or any determination by the SCPSC to disallow the recovery of costs would adversely impact results of operations, cash flows and financial condition.

The information summarized above, as well as additional information regarding uncertainties concerning WEC's ability to continue to fulfill its performance and financial commitments and Toshiba's ability to perform under its payment guaranty with respect to the project and other related matters, is further discussed in Note 2 and Note 10 to the consolidated financial statements.

Environmental

The results of recent elections may affect the pace at which federal environmental laws and regulations are enacted or how stringently their provisions are interpreted in the future. However, public sentiment surrounding air quality and water quality remains strong and is expected to continue unabated.

Over several years, SCE&G has made significant investments in constructing non-emitting generation (the New Units previously mentioned) and retiring certain coal-fired plants or converting them to burn natural gas. In addition, SCE&G expects to add the renewable energy from six new solar generating facilities at locations throughout its electric service territory over the next few years. The impact of these investments is expected to result in a significant shift toward non-emitting sources of fuel used to generate electricity in the future.

Generation Type	2016 Actual	2021 Projected
Nuclear	24.7%	56.7%
Hydro	3.3%	3.4%
Solar	—%	2.2%
Total Non-emitting	**28.0%**	**62.3%**
Biomass	1.7%	—%
Natural Gas	33.5%	17.9%
Coal	36.8%	19.8%
Total Generation	100.0%	100.0%

In addition, SCE&G and GENCO have made significant investments to install pollution control equipment at their remaining coal-fired plants. These investments, together with investments in non-emitting generation, have reduced their air emissions and are expected to result in additional reductions in the future.

Emissions, measured in thousands of tons			
Year	**NO_X**	**SO_2**	**CO_2**
2005	27.0	107.9	18,778.7
2013	7.0	19.3	12,507.9
2014	7.6	16.8	13,984.6
2015	5.7	5.1	12,891.8
2016	5.4	2.7	11,567.4
2021*	3.2	1.2	7,062.5
% decrease from 2005 to 2021*	**88.1%**	**98.9%**	**62.4%**

* Projected

The status of significant environmental laws and regulations and certain initiatives undertaken to ensure compliance with them are described in Environmental Matters herein and in Note 10 to the consolidated financial statements. In addition, uncertainties with respect to the New Units are described in Note 10 to the consolidated financial statements.

Gas Distribution

The local distribution operations of SCE&G and PSNC Energy purchase, transport and sell natural gas to approximately 907,000 retail customers (as of December 31, 2016) in portions of South Carolina and North Carolina in areas covering approximately 35,000 square miles. Operating results for gas distribution are primarily influenced by customer demand for natural gas, rates allowed to be charged to customers and the ability to control costs. Embedded in the rates charged to customers is an allowed regulatory ROE for SCE&G of 10.25% and for PSNC Energy of 10.60% through October 31, 2016 and 9.7% thereafter.

Demand for natural gas is primarily affected by weather, customer growth, the economy and the availability and price of alternate fuels. Natural gas competes with electricity, propane and heating oil to serve the heating and, to a lesser extent, other household energy needs of residential and small commercial customers. This competition is generally based on price and convenience. Large commercial and industrial customers often have the ability to switch from natural gas to an alternate fuel, such as propane or fuel oil. Natural gas competes with these alternate fuels based on price. As a result, any significant disparity between supply and demand, either of natural gas or of alternate fuels, and due either to production or delivery disruptions or other factors, will affect price and will impact the Company’s ability to retain large commercial and industrial customers.

The production of shale gas in the United States continues to keep prices for this commodity at historic lows, and such prices are expected to continue at generally low levels for several years. The supply of natural gas from the Marcellus shale basin has prompted companies unaffiliated with SCANA to propose a 550-mile pipeline that would bring natural gas from West Virginia to Virginia and North Carolina. This pipeline is expected to be completed in late 2019 and, if successful, it may drive economic development along its path, including areas within PSNC Energy's service territory, and may serve to assist in keeping natural gas competitively priced in the region.

Gas Marketing

SCANA Energy markets natural gas in the southeast and provides energy-related services to customers, including, notably, retail customers in Georgia. Operating results for energy marketing are influenced by customer demand for natural gas and the ability to control costs. The price of alternate fuels and customer growth significantly affect demand for natural gas. In addition, the availability of certain pipeline capacity to serve industrial and other customers is dependent upon the market share held by SCANA Energy in the Georgia retail market. SCANA Energy sells natural gas to approximately 450,000 customers (as of December 31, 2016) throughout Georgia. This market is mature, resulting in lower margins and stiff competition. Competitors include affiliates of large energy companies as well as electric membership cooperatives, among others. SCANA Energy’s ability to maintain its market share primarily depends on the prices it charges customers relative to the prices charged by its competitors and its ability to provide high levels of customer service. In addition, SCANA Energy's operating results are sensitive to weather.

RESULTS OF OPERATIONS

Earnings and Dividends

Earnings and dividends were as follows:

	2016	2015	2014
The Company			
Earnings per share	$ 4.16	$ 5.22	$ 3.79
Cash dividends declared per share	$ 2.30	$ 2.18	$ 2.10
Consolidated SCE&G			
Net income (millions of dollars)	$ 525.8	$ 479.5	$ 457.7

On February 16, 2017, SCANA declared a quarterly cash dividend on its common stock of $0.6125 per share.

2016 vs 2015

Earnings per share decreased primarily due to the sales of CGT and SCI in 2015, higher operation and maintenance expenses, higher depreciation expense, higher property taxes and higher interest expense. These decreases were partially offset by higher electric and gas distribution margins, higher other income net of other expenses and higher energy marketing net income, as further described below.

Consolidated SCE&G's net income increased primarily due to higher electric and gas distribution margins, partially offset by higher operation and maintenance expense, higher depreciation expense, higher property taxes, higher interest cost, and higher income taxes, as further described below.

2015 vs 2014

Earnings per share increased due to the sales of CGT and SCI in 2015, higher electric margins, lower operation and maintenance expenses and lower depreciation expense. These increases were partially offset by lower gas margins, higher property taxes, lower other income, higher interest expense, a higher effective tax rate and dilution from additional shares outstanding, as further described below.
